That's great news. I saw that on the strongsignals.net news front page as well. Great to see "something" is on the horizon for MultiNet II. It's just too bad it will require a PC-controlled scanner and a discriminator tap (I assume, since ETRAX did) to use it. Will certainly be a godsend for those in Tucson who value Pima SO monitoring so highly. No doubt if I still lived in the Tucson area, I'd want to buy my OptoCom back from you! LOL.

Will be interested to see if anything else pops up.
For those interested, Rich Barnett at Scanner Master apparently has advised that he is continuing to work with Greg Knox (a major TrunkTrack engineer) on the development of an "add on" board for the BC780 to allow it to do digital systems. This is good news, considering the scanner on the horizon from Uniden in "a year or so" is expected to be a handheld. If this all pans out, we could add "digital boards" to our BC780's, and get new "digital" handhelds from Uniden, and then have both base/mobile and handheld models capable of monitoring digital systems, like MCSO and (someday) City of Phoenix.

All in the future though... :)

Every Glendale station should have them at the main intersections closest to the station. This has been so for over 10 years. I have been on the engine when it recieved a new unit and had to be tested. Several runs doun 55th ave to Northern with Eng. 51 (now 151) to do the checking and adjusting.

The traffic light override is an optical system. It responds to a special strobe light mounted on the fire trucks. The City of Tempe has several of them, and plans to install them at every traffic light. The City of Glendale has a pair of them by Station 157. Don't know who else has them.

Richocet has a website: http://www.ricochet.com/. Here's the technical info: http://www.ricochet.com/ricochet_advantage/benefits/home/technology.html. It includes a drawing of the lightpole radios.

Dan,
You actually bring up a very important point and some folks may not want to get too excited. E-Trax only worked with the OptoCom. Joe had always stated he was working on the ability to interface with other radios but to my knowledge that never happened. If J-Trax is the same, you will have to have an OptoCom receiver. As you know, the Optocom has been discontinued, so maybe Joe has taken that into consideration.
Your old OptoCom is actually back with Optoelectronics as we speak getting the latest BitBanger/ComCounter upgrade. I was hoping to get all the options before Optoelectronics discontinued them as well. The OptoCom has turned out to be by far the best MilCom receiver I have had. With the Probe6 software it is very powerful.

I saw something similar to this on I-17 on the poles in the median...look like solar panes pointing at the lanes. Buddy of mine at ADOT asked a friend of his and his friend said they were to monitor the flow and amount of traffic to alert ADOT employees about traffic jams, where they are, etc., for the TrafficBoard stuff.

I saw one of the boxes you mention in front of the post office at 59 Ave and Beardsley (actually, two of them...). They were pointed at the N/B lanes of 59 Avenue just before the light at the bridge. My GUESS is that they monitor how many cars are backed up (if backed up to the light) and would control the traffic signal at the overpass to reduce the congestion.

Just an idea.

I didnt expect to find a lot of laptops in that area, primary users of
laptops with richocet i would expect to find along central and along east
camelback- along the bigger business areas. and i really havent seen any out
there

1415. MultiNet on 780

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-05-22 13:52:53 UTC
From: Dan Rollman
Topic: 1415 Message: 1415

The following link shows pictures of a couple of the signs displayed by Scanner Master at the Dayton Hamvention this past weekend.

http://www.scanfan.com/dayton.htm

In them, you can see that the digital board for the 780 is being advertised as becoming available this year. Also, the EFJ MultiNet software it says WILL work with the BC780 scanner. If this is the case, it is possible discriminator audio is not needed, in which case it may with for the 895 or even 245 as well (or theoretically could, depending on what scanners they chose to support).

Two peices of great news! The digital-news for Maricopa County SO listeners, and the MultiNet-news for Pima County SO listeners!

Dan

Dan,

First of all, great news. Thanks for the heads up.

I don't own the 780 yet, but two items in the list on the EFJ make me wonder.

Works with Bearcat 780 scanner and Easy to use DOS-based software.

I don't know how the 780 accepts software modification, but it almost sounds like one
would need an interface of some type between the computer and the 780 to hear the EFJ
signals. Or access to the discriminator audio.

This of course would mean that it is no longer mobile capable.

Is there something else about the 780 that I'm missing?

Thanks,
John

Glen,

Sure, I even used mine to record signals straight in to the line input, while stationary. I'm not too sure how well it would work if you are trying to scan and drive. I've got some rough terrain where I live, i.e. dirt roads. Even highway driving isn't exactly smooth. I'm not sure I'd want to test out my harddrive's capability to handle the jostling around while I'm trying to listen to our local boys & girls.

Anyway, it was just a question. I haven't even seen the BC780 in person yet, so I thought I'd ask.

Thanks,
John

Does anybody know where I can get info on frequencies in New Mexico?
I looked through the Yahoo groups list, and came up with an ARES
group, a RACES group, a Skywarn group I believe, and 2 Amateur radio
clubs, but no scanner group.

I'm specifically interested in agencies along I-40, as there is an
outside possibility I may be moving in the next couple of months, and
I'd be driving that route on my way to friend's in Oklahoma.

For that matter, I-40 through Texas as well and into Oklahoma City.
(Final destination would be Tulsa if it happens.)

Even if I don't move, having the info for travel purposes would be
useful.

Thanks.

I have the 2nd edition, 1992. I'm just wondering how out of date it is? It has the NMSP; Bernalillo, Sandoval and Santa Fe Counties; and Alburquerque City information, all on VHF-High Band. That still leaves 4 other counties: McKinley, Torrance, Guadalupe, and Quay. It's a similar situation for Texas and Oklahoma information. I have very little money right now, (laid-off a month ago, which is why the outside possibility of a move), and I can't afford to go out and buy the 3rd edition, or the Police Call book/CD. The FCC website doesn't give the details of channel plans, etc., just the raw info. Makes it difficult to figure out what may be worth listening to, and what wouldn't be. A Yahoo group for New Mexico would be great right now.

If anyone has current info, I'd appreciate it. Even if it just confirms the 10-year old info I have, it would be nice. You can email me directly. kb7mib at hotmail.com

Thanks.

John.

1424. Presidential Visit to Mesa Via Williams/Gateway

Bush to honor vets in Mesa on Memorial Day

May 25, 2001

Jon Kamman

President Bush's brief stop in Mesa on Memorial Day to honor veterans will be against a backdrop of fighter planes dating from World War I to the present.

Admission to the event in the Champlin Fighter Aircraft Museum at Falcon Field Airport is by ticket only.

Tickets allotted to the Arizona Department of Veterans Services, the state Republican Party and members of the state's congressional delegation were reported all gone.

Details of the visit still were being worked out Friday, but state and congressional sources said about 2,000 people are expected to attend.

The Phoenix Boys Choir will sing the National Anthem and other patriotic songs.

Bush, making his first visit to the Valley since being elected, is expected to arrive after 2 p.m. at Williams Gateway Airport, then travel by motorcade to Falcon Field.

Arizona GOP Reps. J.D. Hayworth and Jeff Flake will accompany the president on Air Force One.

Rep. Bob Stump, Arizona's senior congressman, will be master of ceremonies at the event. Gov. Jane Hull and Sen. Jon Kyl are among other officials expected to attend.

Bush, who will visit Arlington National Cemetery before coming to Mesa, will depart for Los Angeles California soon after the ceremonies.

The Champlin Museum displays 38 fighter planes and assorted military memorabilia.

Speaking with a control tower staff at Gateway, they say that most likely AF1 will come up on the military frequencies for IWA. That is what they tend to do. No other aircraft in the area will really hear them on any of the common tower frequencies

From: Andrew Clark
Topic: 1429 Message: 1429

If you're like me, you find listening to the local mall ninjas highly amusing. Dan's Southwest Frequency Directory has a list of frequencies licensed to the local malls, but I'm looking to build a list of confirmed security frequencies and PLs/DPLs. For example, Paradise Valley Mall security is 464.5375 D612. If you live near other malls and can use your fancy-schmancy PRO-92/SC200/BC780XLT to confirm the security freq and PL, I'd love to hear it.

Thanks,

Andy Clark

I know I don't live in the "Valley of the Burning Sun", but in regards to your database of mall freqs, the "Mall in Sierra Vista" (which is about the equivalent of ChrisTown, but hell, it's the only mall we got down here!) is as follows:

Ch 1 Operations: 464.750 (rx) 469.750 (tx) DPL 731
Ch 2 Security: 464.550 (rx) 464.550 (tx) DPL 731
NOTE: Ch. 1 is an "on-site" repeater, owned by the mall, it has a landline available for use on it, and it's primarily used by "clean-up crews", mgmt. ect. during business hours, but security uses it during the evening hours.

And you absolutely right about the "Mall Ninja's" Andy, they are almost as comical as the MP's over on Ft Huachuca!

Additional Changes:
I believe DPS has dropped the number designation on all their helicopters and refer to them now as
"phoenix ranger" or "kingman ranger" etc.
At least on Emscom and in the Phoenix Area they do.
the exception to this is that Phoenix Fire calls "phoenix ranger" as "Ranger 41" because their cad will not recognize a unit without a number. Last time I checked the "phoenix ranger" that is a Bell 407 actually had a tail number of 52AZ, making it Ranger 52 - There was major confusion with phoenix when it was coming up as ranger 52, so some changes were quickly made.

Also, The spare helicopter is kept at Sky Harbor at the DPS Air Units Hangar. Its right next to SRP's hangar if you are familiar with that.

Another addition to the Air Ambulance Family would be the Yuma Air Stations Air Medical Unit. They are actually the first due aircraft in most of the Yuma area, and yes they do provide transport and treatment for non military personel.

Also there is no longer an Air Evac 8 at Kingman, and add AirEvac 12 to Phoenix Dear Valley Airport.

Firebird, Falcon and Fox are not used for Medical transportation. They are purely law enforcement.
Many times Fox will have an EMT on board or will fly in paramedics to the river, but its not medically configured and transport in it is next to never (its way to nice of a helicopter to get blood in it!) :-)

I think thats it for now!

Mike

1438. RE: [PrescottScanner] channel 3 news// THUMB FIRE

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-05-29 01:39:00 UTC
From: Temp Berdan
Topic: 1438 Message: 1438

PNF 168.175.... passing a lot of Thumb Fire (Located near Thumb Butte, about 25 miles SW of Prescott) traffic.
Acreage has not been announced.... but it appears to be remote and rather small.

In addition to 135.650, the tanker (s) have been assigned 166.675 for the Air Boss (who is orbiting fire) and lead plane (which will lead tankers into any close quarter canyons, etc.).
The 135.650 freq. should be the one that the above will use for most tanker on scene ops.

If you have never seen a lead plane work, and have the opportunity to do so, do it.
Those pilots can thread a needle and pre fly each drop zone before the tankers are led in.
The tankers put their lives in their lead plane pilots' abilities on many fires, going into places that you cannot imagine possible.

Unfortunately, I do believe I heard a NX blurb recently, which said that many Nat. Forests are going to dispense with lead planes to help cut budgets.
Not a good move.

PNF also guarding 168.625, which is a nationally used tanker air base freq.

Tanker is using Prescott tanker base for retardant re-supply.

Lastly, look for PHX TV CH5 chopper to be in fire area shortly.

Hope this helps.

I have just posted an Excell file (works in progress) of Forests w/n the state of AZ only. All the data marked in blue is verified from various Forest Service web sits but still needs quite a bit of work. I am hopeful that anyone who may work for the FS might fill in some of the missing data as time permits. For those of you who are interested in BLM, FWS, or NPS it will be very simple to add those agencies to the roster.

Thanking you in advance for any help
Danny McLean

~~~~~~

Speaking of the BLM and FWS, I don't hear much of anything on the two BLM VHF channels or the two UHF channels. On my scanner, 168.220 has an image of the 146.820 Ham repeater which is only 5 kHz off of 168.225, and on 168.300, I have only heard fire weather forecasts. I've never heard anything on 419.775 or 419.875. Does anyone know if there are any active BLM channels monitorable in the Phoenix area?

The FWS 164.625 repeater was very active this weekend up on the recreational lakes with law enforcement comms. They responded to an overturned boat by Fisher's Island. Don't know which lake that is. Only minor injuries, I believe. MCSO was also on scene.

168.225 is the law enforcement channel for BLM & some NPS. There is a site on Smith, Lemmon, White Tanks with a few others. Mostly you will hear Mt Lemmon. 168.300 should pickup soon. 75% of law enforcement traffic from Tonto NF will be on the digital Maricopa Sheriffs system since MCSO does all of the vehicle/person checks for Tonto NF L/E. Some will be on Tonto NF Firenet 1, Tonto NF Ch2 168.725 or Admin, Tonto NF Ch 6 164.825. Also for Prescott NF alot of L/E traffic is on Yavapi Sheriffs office main ch's. So for NF, BLM LE listen to your local county sheriff dept.

In So Cal. California BLM L/E uses the Riverside County Sheriffs system for L/E use within Riverside County. Outside of the county they use other county systems as well as VHF L/E Nets. All NF's use their own ch's for L/E use.

Hope this helps.

John, those 400Mhz freqs for BLM might have been replaced by microwave or fiber optic links. They might also be narrow point to point beams. The 168Mhz channels might be used primarily in simplex mode way out in the middle of the deserts. Or maybe they have moved to new narrowband freqs.

John,

You are right. The 400mhz stuff was just used to link. Like in So Cal L/E ch's are Ch 5 166.750 & Ch6 167.000 simplex. Ch5 is the main ch and would be repeater on 400mhz with a different link frequency from each mountain top to repeat back to San Bernadino.

309 deals with a person who they think may have drugs in their car. Violator Directed means that the person has done something to lead the officer to believe that they have drugs in their vehicle.

309D is the person who is delivering drugs or the vehicle that has drugs in the vehicle. This not only means drugs but any other type of controlled substance that is illegal to transport.

On the bottom of the message titled "New file uploaded to ArizonaScanner" you will find a link that will take you to the file at the Yahoo group web site. If you still have trouble then by all means let me know and I will help you out. With the three files their, I hoped that I covered all formats for everyone.

I plugged into the freq. for a little while and did some more research. I can hear them using call signs of Charley. The other research that I did also has that freq. list as Customs in this area. It could either be FBI or Costumes if you live in Mesa. Then again, this info may be completely wrong and it could be Bob's Big Boy restaurant :)

Morning folks... I have been researching my database as well, and
I have it listed as "OCDETF"... now then, I don't have a clue as to what
those letters mean, but the info came from the US DEA visor card (you
know, the cheat sheet the DEA field agents use that's kept in the visor
of their car)... it's loaded into their (DEA) VHF (duh!) radios here
locally... if I am not mistaken, it is also loaded into the local US
Customs radios.... up until now, I have never been curious as to what the
letters "OCDETF" meant, but now my curiosity is peaked!... I will have to
inquire and let you'all know!

Keith,

I carry this freq as a US Customs frequency. On another Customs frequency, 164.60mhz, I've heard callsigns Charlie-XX testing out radio equipment and measuring the signal strengh and quality. Are these guys acting like tech/comm guys?

Here it is:
==========
OCDETF
Organized Crime and Drug Enforcement Task Force

Through the vehicle of the Organized Crime Drug Enforcement Task Force (OCDETF), the U.S. Attorney for the Northern District of Oklahoma pursues major drug trafficking organizations formed for the purpose of importing, manufacturing or distributing large amounts of controlled substances and for financing and laundering the proceeds of such illicit activities. The "Drug Task Force," as it is known colloquially, is comprised
of prosecutors and law enforcement personnel from a variety of federal, state and local agencies.

The Drug Task Force places a priority upon countering those narcotics organizations which routinely rely upon violence to perpetuate their operations of intimidation, enforcement and retaliation. The investigations of such organizations are typically multi-year, multi-defendant complex endeavors which commonly demand sophisticated electronic and undercover techniques, and which require considerable prosecutorial involvement from their inception.

In addition to the Drug Task Force cases, the U.S. Attorney's Office routinely prosecutes narcotics cases which otherwise do not fall within the guidelines established for task force attention. These cases involve drug seizures occasioned by automobile stops or airport encounters, as well as the more aggravated drug-trafficking found at the local level, including the illegal use of prescriptions. The successes of the OCDETF program and other narcotics prosecutions are a direct product of the professionalism and enthusiastic cooperation of the investigators assigned to the cases from various agencies, and those assigned to support them.

Temp,

No, I am actually southeast of Tucson, but here is what I've heard personally:

Freq Channel Who

164.55 - Alpha-2 This has been a while since I've heard traffic here.
164.60 - Alpha-6 CS: Sector with Alpha-1xxx and Alpha-2xxx ground units, Lima-XXX (Aircraft), and Charlie-xx (tech/comm)
169.45 - Charlie-2 CS: Sector with Alpha-2xxx ground units, Lima-XXX (Aircraft),
Charlie-xx (tech/comm) and Fish and Wildlife
282.425 - Blue-1 CS: Hammer (US Customs C3I at March AFB, CA) with Omaha-XXX (Aircraft),
Lima-2000 (Tucson) with Lima-xxx (Aircraft),
Lima-2200 (Phoenix)
NOTE: Lots of good aircraft border activity on this one, almost every day.

I haven't listened to the following, since my portable can't handle the specific freqs:
164.2875
165.2375
165.5875
165.6375
165.6875
165.7375
166.4625

Some day I'll punch them in my PRO-2006, when I'm done with UHF capability of the radio :)

Customs uses the same frequency in different parts of the country so I've also got these
in there as well:
120.325 - Victor CS: Lima-1400 with Omaha-XXX (Aircraft)
120.825 - Victor
123.775
132.95 - Air-to-Air Ops
413.45

That enuff?
John

1469. Traffic Control Division

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-03 19:18:01 UTC
From: AdamH
Topic: 1469 Message: 1469

Hello to the Group!
Yesterday I was waiting at an intersection in west Phoenix when an unmarked Chevy Blazer II came screaming into the intersection with lights and siren going! Atop the front windshield was the moniker "Traffic Control Division" No other markings. Out jumps this big dude dressed like a DPS officer, even had the hat!, and he stops all the traffic! A few seconds later along comes a funeral.
It just happened to be for the little girl murdered in the west valley last week.

What Im wondering about is I noticed they had uhf antennas on the vehicles, which consisted of the blazer and several white chevy caprices, looked like old police cars, does anyone have an idea what frequencies these funeral escort operators operate on? I noticed the big dude had a sholder mic also and was using it so Im assuming they must coordinate intersection control somehow.
I always seen the motorcycle escorts but this is the first time Ive seen 4 wheel vehicles...did they decide to get air conditioning? Adam

From: FLANO
Topic: 1455 Message: 1472

Temp,

Your welcome.

Here is a good page with Customs, DEA, and JTF freqs and an explanation about the COTHEN network. http://www.lcblanton.com/cothen/

I have yet to hear any of the COTHEN comms, but I'm listening....

As far as all of the other "Blue" freqs listed on the above page, I haven't heard even a peep on them.

The only other Feds that I've heard down here are the US Marshall guys on 163.20 C/S Tucson-Control with Mike-XX and
163.81 C/S Tucson-Control with Arizona-XX

I did put the the Customs freqs that I mentioned earlier that I hadn't yet heard from and can add that 165.7375 is Voice Privacy, no clear voice heard.

Happy Hunting,
John

1474. More Federal Frequencies Active Tonight

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-04 04:21:17 UTC
From: N7DJR@hotmail.com
Topic: 1474 Message: 1474

After monitoring 164.550 I started searching the rest of the Gov. VHF band and found these ti be very active tonight in fact they are active now as I post this
173.300
167.6625
172.750
165.2375-DES
169.400-Talking about a fire
163.775
169.125-Strange tones
168.975

1475. RE: [ArizonaScanner] More Federal Frequencies Active Tonight

I did a search on the frequencies you listed, using the Southwest Frequency Directory on CD-ROM (www.scannerstuff.com).
All but 169.125 were identified.

173.3000 Southwest Gas (there are a handful of utility freqs mix into the fed band, mostly in 173's)
167.6625 is used by the FBI in the Salt Lake City area. Perhaps they use it here too?
172.7500 is the INPUT to the 168.225 repeater operated by the Bureau of Land Management
165.2375 is Customs Alpha-2 operations repeater
169.4000 Casa Grande National Monument (National Park Service)
163.7750 U.S. Border Patrol, Pinal County operations repeater. Also, Oatman Mtn. repeater site.
169.1250 No Idea
168.9750 U.S. Border Patrol "Lemon-2" repeater, which is on Mount Lemon and is the primary ops repeater for the Tucson area.

Dan

From: John H. Guetherman
Topic: 1455 Message: 1478

I'm listening to this right now. (1:50am Monday). It sounds like Border Patrol. I say this because it seems as if they're watching people on the move, and I also heard a comment about a number of hits, which is just like the reports of hits on the ground sensors the USBP uses along the border.

It wouldn't be too unusual for federal agents to borrow another agency's radio channel if it isn't otherwise being used in a particular area. And it may be possible that all the Federal law enforcement channels are now available to any agency, just like the former seperate Public Safety channels are now in one pool, instead of being divided up among fire, police, local goverment, etc.

John,

They could very well be checking out Comm in this area. From what I have heard, the Feds are building up in the area but I have no idea why nor could I care why. They are just making scanner listening more interesting :)

From all that I can tell, they are more then likely Costumes officers doing a stake out. I heard a few guys talking about the number of people in a group and saying they should just do a tour, so it could also be USBP using the freq. with the permission of Customs. Remember the illegals that died in the dessert last week, they are stepping up patrols so that doesn't happen again.

Like I said, I could care less what Federal Agency is using it, but it do make for good listening don't it? :)

Keith,

I carry this freq as a US Customs frequency. On another Customs
frequency, 164.60mhz, I've heard callsigns Charlie-XX testing out radio
equipment and measuring the signal strengh and quality. Are these guys
acting like tech/comm guys?

John

Adam,

From what I understand, DPS offered their services for the funeral. The Blazer you saw may have been one of their undercover vehicles they get with the thanks of the drug dealers in the area that get caught. State never has enough money to pay for all the new cars and repairs they run up at DPS so you see some interesting cars out there making traffic stops. I saw one several months ago that was a Chevy Malibu and boy did it look cool. They love to use them when they do their aggressive driver details.

Subject: [ArizonaScanner] Traffic Control Division

Hello to the Group!
Yesterday I was waiting at an intersection in west Phoenix when an unmarked Chevy Blazer II came screaming into the intersection with lights and siren going! Atop the front windshield was the moniker "Traffic Control Division" No other markings. Out jumps this big dude dressed like a DPS officer, even had the hat!, and he stops all the traffic! A few seconds later along comes a funeral.
It just happened to be for the little girl murdered in the west valley last week.

What Im wondering about is I noticed they had uhf antennas on the vehicles, which consisted of the blazer and several white chevy caprices, looked like old police cars, does anyone have an idea what frequencies these funeral escort operators operate on? I noticed the big dude had a sholder mic also and was using it so Im assuming they must coordinate intersection control somehow.
I always seen the motorcycle escorts but this is the first time Ive seen 4 wheel vehicles...did they decide to get air conditioning? Adam

Hey Donnie,

You should do real well with the US Customs UHF freq 282.425mhz, aka "Blue-1". The boys in khaki? play down in your area a lot and often wonder if Huachuca restricted areas are free to traverz. Many times their comms need to be relayed by another aircraft back up here in Tucson.

Don:
I might be late with this one but OCDETE stands for
Organized Crime-Drug Enforcement Task Force. In the
early 1990s 164.550 was listed as US Customs Service
Simplex. I do not show it as a tactical frequency even
then. It does occasionally come out to mystify all of
us. It certainly sounds like a joint task force
operation. I would think all of you in Southern Az.
are going to have fun with this interesting frequency.
Keep me posted.

From what I've seen on their websites, Customs Inspectors wear a dark blue uniform, and their trackers wear camoflague. Border Patrol agents wear green uniforms.

http://www.customs.ustreas.gov/ Check out the photo gallery and the careers links.

http://www.ins.usdoj.gov/graphics/lawenfor/bpatrol/index.htm Only small pictures. There is/was another unofficial site, http://usbp.com but I can't get the site to open right now.

I understand that the Border Patrol has jurisdiction over state and local laws as well? They have the same authority as a Sheriff's deputy? Is that automatic, or do they go through a Sheriff's academy?

John in Peoria

Adam -
Highly unlikely that was DPS you saw; more likely the "funeral cops", I remember used to escort funerals in the Valley. The used to ride H/D motorcyles, complete with red lights, dressed in White shirts and Black riding breeches, and tall motorcycle boots, white half helmets with silver badges. These were civilians, not DPS. They used to operate VHF radios, 154.600 Mhz I remember, but had a very short range. I would not think DPS would used a U/C vehicle with "Traffic Control Division" emblazoned across the top, perhaps an unmarked 4WD. Did they display Red & Blue lights or just Red? Did you see the uniform up close(Patch, badge, etc)or from a distance? Also, if they were DPS, why wouldn't they use a marked vehicle for traffic control. Just a few random thoughts to ponder...

73's to all,
BD

A newspaper article about the funeral said that a funeral escort company, I forget the name, had volunteered to provide free escort service for the funeral of the little girl.

I suspect these were the Traffic Control Division cars that were spotted.

From: drr1@home.com
Topic: 1495 Message: 1495

Does anyone have an up-to-date list of the Flagstaff Fire Dept.
channels and their corresponding frequencies? All of the lists I've
seen seem to be out of date. I think I have all of the frequencies,
but I can't figure out which channel goes with which frequency.
Every now and then they switch to a different channel (for example
from ch. 1 to ch. 3) and I lose the traffic (I can't hear them on any
other frequency.) I'm currently using the frequencies from SWFD 6.0.

Thanks,
Dennis

1496. RE: [ArizonaScanner] Flagstaff, AZ Fire Dept channels

Topic: 1496 Message: 1496

Hi Dennis,

Flagstaff FD re-did their radio channel plan, including a couple new frequencies, late last year. It reflects a "master plan" for the other agencies Flagstaff dispatches for (Highlands FD, Doney Park FD, Timberline Fernwood FD, etc.) on one organized radio system.

The changes and new radio plan are included in the newer 6.1 UPDATE booklet (a 60-page update printed 2 months ago, which brings the 6th edition printed last year, even more up to date, available at www.scannerstuff.com). This update booklet has tons of updates for Arizona, particularly, so scanner listeners in Arizona who like having the most current info may want a copy of this booklet. It also includes a "metro guide" for the Phoenix area, which is an easy quick reference to public safety frequencies in the Phoenix valley (perhaps for the glove box in your car?).

This is in addition to the "updates" to the 6th edition book, which are included for the whole state. Along with Flagstaff FD, major changes are shown for Phoenix FD (with a new tactical channel assignment MAP); Arizona DPS designators, abbreviations, and offices; massive Border Patrol repeater listing, updates and additions to fire apparatus and station locations statewide; a new massive Maricopa County Trunked System talkgroup list; America West Airlines and Southwest Airlines trunked systems; and hundreds of smaller updates.

The most critical (it is a 16 channel plan) of the Flagstaff FD updates shown on Page 47 of this newer book are:
(R=Repeater, S=Simplex, 2nd to last column like 100.0 is PL Tone)

Ch1 153.935 R 100.0 Areawide Dispatches
Ch2 154.175 R 100.0 Responses - Highlands FD
Ch3 154.160 R 91.5 Responses - Doney Park FD
Ch4 154.220 S 123.0 Tactical - Flagstaff FD
Ch5 155.790 R 131.8 Areawide EMS
Ch6 155.745 R 91.5 Operations - Flagstaff FD
Ch7 153.950 R 110.9 Responses - Timberline Fernwood FD

Flagstaff FD also has several new training and alternate channels (Ch14, 15, 16) shown in the update.

Again, these updates come from the new SWFD Metro Guide 6.1 / UPDATE booklet published by Scannerstuff (www.scannerstuff.com), available at our website. Since the SWFD 7th Edition is not going to be printed until well into 2002 (not until after major changes to Phoenix, Mesa, and other radio systems take place), we published this "update" booklet in April, 2001 to bring your SWFD-6 up to date. Our customers told us they'd prefer a small "update" booklet that costs a lot less than a whole new big book (or nothing at all),

in the time while we are collecting new and updated information for 2002's SWFD-7.

You can check out the new update book at www.scannerstuff.com

1498. Scanner Frequencies offer

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-06 16:38:48 UTC
From: Dan Rollman
Topic: 1498 Message: 1498

Scannerstuff is currently offerring a special on orders of the Southwest Frequency Directory 6th Edition CD-ROM placed by Monday, June 11, 2001. All orders for the SWFD6 CD-ROM placed at www.scannerstuff.com will receive a FREE Phoenix Metro Guide 6.1/UPDATE BOOKLET. To receive this offer, simply order the SWFD6 CD-ROM at www.scannerstuff.com as normal before June 11, and your order will be shipped with both the SWFD6 CD-ROM and 6.1 Update Booklet.

The Southwest Frequency Directory 6th Edition on CD-ROM includes the April, 2000 (most current full book) SWFD in Adobe Acrobat (.pdf) format for on screen viewing, searching, printing, etc. Search by frequency to find out who is using a particular frequency; Search for a specific company or agency; Search for a radio code; Print only certain pages or sections.

The Phoenix Metro Guide 6.1/UPDATE booklet was released two months ago, and brings SWFD6 even more up to date.
With this offer, receive a computerized, searchable / printable version of SWFD6 (4/2000), and a printed update booklet and Metro Guide (4/2001) for $30 plus shipping. You save $18.50! Order yours now at www.scannerstuff.com

For information on this offer or other Scannerstuff products and offers, please email sales@...

Hey Dan this is August, W8MIA with a question please. (I have your Version 6 "6.02 to be exact")

I live About 12 miles north of Kingman of US Hyw 93 on th way to Hoover dam. At this location I often travel across the river into Nevada, Hwy 95 north or over the dam into Boulder city, Henderson and Las Vegas.

The CD seems to not be as accurate as I would hope. Is there an update coming that will change this listing? Here are the listings I have for the NHP, about 6 to 8 weeks old", I would love any updates from any source.

NHP for Zone 1 (Southern NV)

Ch..#	RX Freq.	DCS/pl	TX Freq.	DCS/pl	Description
1	151.1225		161.1225		Rio Primary
2	151.3625		161.3625		Rio Secondary/TAC
3	151.1075		161.1075		Apex Primary
4	151.2875		161.2875		Apex Secondary/TAC
5	151.0925		161.0925		Arden Primary
6	151.2725		161.2725		Arden Secondary/TAC
7	151.0175		161.0025		Indian Springs Primary
8	151.2275		161.2125		Indian Springs Secondary/TAC
9	151.0025		161.0025		Potosi Primary
10	151.2125	125	161.2125		Potosi Secondary/TAC
11	151.2800	115	161.0025		Laughlin Primary
12	151.1000		161.2125		Laughlin Secondary/TAC
13	155.6775		155.6775		Amargosa
14	151.0025		161.0175		Beatty Primary
15	151.2125		161.2275		Beatty Secondary
16	151.3625		161.3625		Rio Tac
17	151.2875		161.2875		Apex Tac
18	151.2725		161.2725		Arden Tac
19	153.7850		160.7850		Rio "3"

154.6800 MULTINET (Apex & Potosi) 155.1450
EMS/Mutual Aid
155.6550 NV Mutual Aid 155.4750 U.S.
Mutual Aid

Please note the NHP units on Hwy 95 (Laughlin to LV) were using Ch-11 151.28 for
some time and now all I hear on this frequency is a steady carrier all the time???

Help,
August

That is true! Radio service was testing it yesterday, not sure if they use DES all the time. AJ PD is stronger then Wickenburg PD so it knocks the signal of Wickenburg out but can hear most of the conversations. This is the way of the future. My Saber is being upgraded tomorrow with DES-XL encryption.

Joe,

Are you saying that you have discovered a way to defeat DES encryption using only a Saber radio, without information from the agency or their radio programmer, to monitor encrypted (not digital, but encrypted) communications?

If so, you stand to make quite a bit of money (not to mention end up in court). Jim Cassidy (Uniden's Sr. scanner designer) would likely be interested in hearing from you.

I'm very interested in what you are saying.

And for the record, you'd get a pretty good argument on your statement that DES is the way of the future. While most acknowledge that the future holds digital communications, DES if far different than mere digital modes. I'd be curious about your reasoning for the belief that DES is the way of the future for local law enforcement agencies primary operations.

Dan

Hi Dan,

Yes have access to a key loaded for DES and possibly the encryption codes.. But not interested in the codes for other agencies. Just being able to use the DES on other freqs. Yes you are right, Digital is the way of the future. What I ment is encryption is the way of the future.. in the terms of making scanner listeners unable to listen. With the different two versions of digital IMBE & Avil <-? out there as well as encryption it is impossible to listen to without the codes as well as agencies to talk to each other without using clear transmissions.

Hi August,

If you're talking about the accuracy of the CD (and book, for that matter, since they have the same info) for Nevada, this is the first edition we've ever covered Nevada, so obviously it won't be as complete as it could be after several editions of development, like Arizona has gone through. Regardless, The SWFD6 book and CD were published in 4/00, which was before the VHF repeaters you list below. This new radio system was quickly discivered after SWFD6 was printed, as soon as it went into use, and the list IS included in the 6.1 UPDATE booklet that was published two months ago.

Now, if you are talking in general about the accuracy of the book as a whole (including Arizona) and your dissapointment in that, you'd be the first ever to mention that, so I'd be very interested in talking to you more via private email to update all the innaccuracies, particularly in Arizona, for SWFD7.

Anyway, yes the list you post was included in the Update 6.1 booklet.

All the more reason why the update booklet comes free with orders of the CD-ROM placed by Monday, June 11.

Dan

Hi Glen!

Yes, SWFD6 included for the first time the metro Las Vegas area. I do have the newer VHF conventional frequencies, which are the same as those posted by August. That list was included in the 6.1 Update booklet. As for the narrowband trunked system, my info was that it was not yet in use by officers, but I will ask a few of my guys up there for a complete list and do some research and let you know.

Dan

Dan,
Will there be a 6.1 Floppy or??? up date of the 6.1 changes available for us that have the 6.0 version in our possession at this time? Could you afford to post the additions and changes on your web site for your current users?

I just purchased my CD (ver 6.02) last month and don't have the cash to buy again so soon. Perhaps there others in this same situation. Let us know please. I would be glad to buy the added info for a small fee.

I would also like to pay an annual fee for your product that would include "Free" (included in the basic cost of course) updates via the web as they become available during the year.

Just a thought,
August

Dan,
I just posted a request for info from you reference an update to the 6.1 updates and changes for those of us that just purchased 6.0. Perhaps on a floppy (if the changes are no to big from a data point of view) or a listing on your web site for a small fee as you see best. Please read it when you can.

I also suggested you provide an annual service in addition to your normal sales of 6.1 that would include free monthly???? updates during the course of the year via your web site!

As an example the annual Fee would be $39.95 (40 bucks). You could also offer a subscriber only download service on your site and save the CD expense as well.

If a person buys just the CD ver 6.1 there could be a $12 coupon inside to allow them to send in the funds (cash, check, PayPal,??) to upgrade them selves to an annual user status???

Just a marketing thought that has a lot of benefits for you as well as your customers. Thanks for reading. Let's see if any others respond to you from the email I posted. I may be the only one in the US that thinks this is a good idea!!! (:-D

I just got a Email from the City of Phoenix website reporting that the restaurant at the Deer Valley Airport has reopened. I don't know what their policy is regarding people with noisy scanners, but it seemed like something worth mentioning to the list.

And I thought I was the only one who went to airport restaurants to monitor air traffic. The 94th Aero Squaderon restaurant at Van Nuys Airport (The busiest non-commercial airport in the US) has head phones in the booths that monitor ATIS. Oxnard and Camarillo both have restaurants with clear views of the runways also.

On a side note. I was flying United out of San Fran and they were broadcasting the pilots radio over the head phones. This was neat because even if they allowed you to turn your scanner on during flight you would only be able to pick up the pilots end of the conversations.

I've compiled a guide to monitoring air traffic at my web site. Here's a direct URL to the page.

Yes you can. I'm on a hot air balloon crew, and we used to go to breakfast there on a regular basis. (Went Saturday morning, really nice place with the remodel, and great food.) I used to take a scanner with me and quietly monitor until my food was served. With a discreet earphone, it would be a lot easier. Also, with Air Evac, and Lifenet up there, you may find yourself a few tables away from one of the crews. (I think I've seen a Native Air helo there also.)

The pilots I crew for are friends with the owner of the resturant. We, and several other balloon crews are well known up there. You'll also see a lot of bicyclists there in the mornings.

1516. The Wild, Wild, West... Part 4

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-10 17:41:48 UTC
From: Temp Berdan
Topic: 1516 Message: 1516

Had an interesting afternoon yesterday, when a crazy, drugged up guy, started threatening people with a large kitchen knife.
His roommate was so scared that the SO sent a deputy to guard him/her until the suspect was captured.

The Yavapai County Sheriff's' Office (154.740) tried to catch him (even had SWAT team member bring up a bean bag gun).

They were up on rooftops searching to no avail.

Two hours later, my scanners lit up again and they finally spotted him again and he flashed his BIG knife at the deputy.

The chase began again, started to get close by, and finally the deputy said code 4; 10-15 and send an ambulance, code 2 (Sedona fire District 154.400).

Jopie says to me, what is the fire engine and ambulance doing at the corner??

I walk outside and there they all are, with the rather bruised up knife wielding suspect right by the corner of our house.

He had been hiding in the brush covered vacant lot right across the street from our house !!!

They got the guy without the bean bag or "suicide by police", and hauled him off to jail.
A good arrest.

Glad he didn't decide to visit us personally.

Only in the Wild, Wild, West !!

1523. Military Air Activity in Srn Arizona

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-15 00:10:19 UTC
From: FLANO
Topic: 1522 Message: 1523

Hello,

Anyone listening to the F-15/F-16 activity in the Sells, Ruby, and Fuzzy MOA's?

According to the Western AD C3I, CS: Hammer, Ruby/Fuzzy MOA's primary frequency is 264.80mhz. That'll be AM modulation. Anybody have any other active freqs?

BTW, I did not here any military aircraft on the frequency, but the US Customs aircraft working the area called in to Ruby.

I just got back from Texas, but my wife tells me that there is a major air excercise happening. Anyone have any details and freqs?

Thanks,
John

1524. Sells MOA active

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-15 01:29:13 UTC
From: FLANO
Topic: 1524 Message: 1524

Sells A MOA is active with flight of 4 unid fighters, Air-intercept activity, Missile locks and Chaff deployment,

Found these freqs on the Internet:

Sells A MOA 276.90mhz
Sells B MOA 301.40mhz
Sells C MOA 308.90mhz
Sells D MOA 381.30mhz

All are AM modulation.

Callsigns: Tinto-XX

Acft switched to 305.60mhz after completing a couple of passes against each other.

John

p.s. According to my wife, they are supposed to be active from 05:30 to 00:00.

Hi John,

Ruby / Fuzzy is down near Arivaca and has a primary of 264.8 and a secondary of 300.7. It hasn't had the activity level recently that was seen a couple of years ago, but it is still routinely used. Other ranges in this area are the Outlaw, Jackal, Morenci, and Tombstone MOAs and of course the various complexes out in the BMGoldwater Range/Sells MOA area. There are well over 100 frequencies that are used for the various activities including VHF-FM, VHF-AM, and UHF-AM. The farther out they are or the lower they are, reception is impacted considerably. Let me know what you are interested in, I may be able to help. I have no info on any local exercise taking place but can provide you with the BMGR schedule for the week. Take care...

Wayne :)

I'm interested in the Air-to-Air intercept activity. I've got over 50 different
VHF/UHF Mil Air freqs punched in now. If you see my next e-mail about Sells MOA,
I picked up a flght of 4 unid fighters on 276.9mhz for a couple of missile passes
then they switched to 305.6mhz to complete the training.

I don't expect to hear any Air-to-Ground activity due to the location of the range
from my house, but......

Perhaps, we should compare notes.....

I'll try to get something worked up here.

Thanks,
John

295.90mhz was active then pushed to 272.10mhz with at least 3 aircraft. I think they changed again, though.

Also had 379.40mhz active for a short transmission, didn't catch it though.

AZ DPS "STATE VHF"

Mobile TX 155.910, Mobile RX 154.935

What area? Radio Sites are:

South Mtn
Telegraph Pass
White Tanks
Mt Ord
Greens Peak
Brookbank
Hualapai Mtn
Mt Elden
Piney Hill
Jacob Lake
Navajo Mtn

154.935 is the VHF statewide channel for DPS. It doesn't get used very
often and as they normally use the UHF statewide channel 460.225. I know a
couple of our dispatchers have heard DPS & MCSO using it during a pursuit a
few years ago. Other than that I don't know of anything it has been used for.

Also FYI, the FCC and PerCon no longer list police frequencies under the service code PP. All police are now included in service code PW, Public Safety Pool, Conventional. Makes it very difficult to sort the police from other agencies.

In addition to what Charles has said below the reason they sometimes go
to this freq. is it allows the DPS cars that have VHF radios in addition
to their UHF radios to speak directly from car to car if the County,
using VHF channels, is involved.

I notice here in the Kingman, AZ area that fewer DPS cars sport the VHF
antenna any more. Many only have the UHF gain antenna?

John, Is Procon still charging an annual membership fee?? I was using
their data base for several months and about a week or 2 ago I could no
longer get in to it without paying I think $25 for 6 months!! Is there
another way to get into this site?? Or did they just change their
policy??

Yes, it is a repeater?. But one that is in trunk of the DPS car.

Called an ?extender? frequency, it takes the officers handheld freq. and repeats it to the 460. xxx main repeater.

This is used universally by the CHP .

Lets the officer have a lower powered handheld transmitter that has longer battery life, and because of the in trunk and more powerful repeater, much better access to the main repeater.

I program it into my portables, as it tells me when I am in the vicinity of a DPS unit.

The extenders? range appears to be approx. two miles.

154.905 is another extender freq. used in CA as well.

I looked this up a few months ago on the fcc data base search and it came back state of AZ DPS?? now it doesn't come back at all.
Does anyone know who all the user's are of this frequency or what page in SWFD? I herd a Base and mobile operations last night it is a repeater.

Hi all,
Just in case you haven?t heard about Russell the cop, who writes frequent accounts of his patrol adventures, here is his last posting. This is a good read and I thought that some of you might _not_ have seen the long time ago posting about the list.
Sub. Info. Is at end of page.
FYI.

Temp
In SEZ, AZ
P.S. I wish Russell would I?D? his department, but I can understand why he doesn?t.
None the less, it would be neat if he would put up a live feed of his activities. :-)

Subject:

As I begin I want to get a matter of business out of the way. I encourage you all to visit the "Ask-a-cop" message board available from my site at www.lifeonthebeat.com It was down for a while and we got it back up and running. After a bit of testing we have now made it better than ever.

If you have a question or comment, the message board is a great place to post and get tons of feedback. Please drop in and give your comments.

At about 2100 hrs last night my Sgt. called me on the radio and asked to "25" (meet) with him. As a patrol officer it always sucks to have the Sgt. want to 25 with you. It always seems like an eternity as you drive across town, sweating bullets, trying to remember what you did wrong this time.

When I pulled up next to his car, window to window, he explained the reason for meeting. He asked if I wanted to assist another agency on a search warrant in our city. Of course I jumped at the chance. It's always a lot of fun to get involved with a new experience. I have been on a few search warrants, but not many.

We first met in a training room and discussed all the details. They went over all of the intelligence that had been obtained. I won't really get into the details of what we had or how we got it, but let me way it was

obvious that there was a lot of illegal drug and weapon activity in the house. The undercover guys were all there dressed in black and wearing their masks up in the top of their heads. There was a diagram of the house drawn in red marker upon the white board at the front of the room. Several copies of the search warrant were circulated throughout the room. As soon as the meeting began, all of the joking was done. Everyone was paying attention to every detail.

When briefing was over, we all went outside and ran through a mock drill. My job was to sprint to the rear of the house and catch anyone trying to leave. Another officer was also assigned the same detail.

After a few minutes, they all loaded up in a van while we followed in two marked patrol cars. About 2-3 blocks away, my heart was pounding. I turned off the stereo in my patrol car, shut the lid on the laptop and killed the headlights. As we rolled up to the house we could see that there were several people standing in the driveway. This was something we expected. I knew my job, so I sprinted along with another officer to the rear of the house. Just as we rounded the corner of the house, we could hear the officers inside yelling "Police!! SEARCH WARRANT". Just then a huge marijuana bong came flying out an open window upstairs. Seconds later I could see the officers enter that room and make it secure.

At that point the K9 officer came in and performed a search of the house. There was a marijuana in just about every room. There was even some cultivation in an upstairs room.

As the officers entered one bedroom there was an adult male sitting on the bed smoking marijuana from a large bong. It was no surprise to find 2 small children playing in the room just a few feet away.

When it was all said and done, several people were arrested, a whole lot of marijuana, paraphernalia and other items were booked into evidence. I must say that I saw a whole lot of things that were new to me. It was a thrilling experience.

I loved that feeling of my heart pounding, the adrenaline rushing and my thoughts racing. That feeling is why cops put up with all the stuff we do.

In regards to the FCC and PerCon websites, I went into the site awhile ago and had no problems. I could surf through the site and go anywhere. I tried going in last week and it took me to a sign-in page.

Do they require you to pay for it now? If not where do I need to go to get the same information?

Sorry about so many posts. When I wrote the reply and
hit send, it told me that I had an error so I kept
trying it. Apparantly it went through didn't it?

By the way, hey group, been lurking for about a month
and love all the freq info that I am seeing. I have
been scanning for about six years now strictly with
portables, though. I live in Apache Junction and seem
to be the only dispatcher for IPN in the metro area.
Been doing that for about 2 months now.

Anyhoos, the mod on this group is doing a great job.
See ya all.

1556. Lone Dispatcher for IPN? Check out www.incidentcommandpage.com

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-16 19:40:21 UTC
From: Dan Rollman
Topic: 1534 Message: 1556

Hi Steve,

Glad you are enjoying the list!

I'm kind of shocked to hear that you seem to be the only active dispatcher for IPN in the Phoenix area, but I guess I had heard they didn't have many members here. You may want to check out Incident Command Page. In fact the former Arizona administrator for IPN has been an ICP dispatcher for almost a year now and loves it. I am a member and dispatcher with ICP myself and it's great. ICP is a LOCAL club, which charges a subscription to fund its expenses but all profit at the end of the year is cycled back into the club. No one makes money off it. We currrently have about 12 active dispatchers in the Phoenix area and a couple in Tucson. I'd say ICP catches "almost" every major incident in and around Phoenix. ICP dispatchers use our own custom ICPage paging software to send incidents to our members via alphanumeric pager. The club has been around since 1995, and has all local TV news stations (Spanish and all), all local newspapers, the AM radio stations, the AP, and even the local rep of the British Broadcasting Corp (BBC) as subscribers to the service. Because we're local, we're able to have monthly meetings for all members at local restaurants, and occassional gatherings just for dispatchers.

Check out ICP's website at www.incidentcommandpage.com for more info! Steve (ICP247) designed a really great website for us!

Thanks for the info, Dan. I actually did search into the ICP but did not like the fact that I had to buy a new pager when I already have a motorola talkabout.

I even emailed the link regarding questions and had asked if there was any way I could use my own pager but kept getting my emails back "return to sender."

Yeah, I would love to get pages other than my own (I am getting some from an ARI007, however, if you are on this list. But that dispatcher is up North somewhere.) But because they are throwing me free months for being an active dispatcher, I am hanging around.

So, is there any way to get around buying a pager?

Wickenburg Police Dept. is using analog voice inversion on selected conversations. I think they are using other frequencies other than 155.625 for the conversations though.

1560. Digital Trunk Scanner?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-17 16:47:25 UTC
From: David C. McCarthy
Topic: 1560 Message: 1560

Is there a scanner available to scanner the new MCSO digital trunked system, or is there a mod or add-on interface for existing scanners that will do the job. I have a BC235XLT trunking scanner. Anyway to help this unit do the job?

From: Charles Simmont
Topic: 1560 Message: 1561

There are currently no scanners capable of scanning digital communications. Rumor (and nothing more) has it that there will be an add on board for the BC780xlt to monitor digital. Uniden also plans to release a handheld version of the BC780xlt, and that may also be digital capable. As for the older trunk trackers, I don't belive there will be anyway to modify them for digital communications.

CS: Smack-01 (EC-130/41st ECS) has declared and IFE due to a probable failure of one of its tires. It took of this morning knowing that there was possibly a problem, i.e. 8 feet of rubber left on the runway.

In approach at this time, waiting for the ABCCC to take-off at 10:30am. They'll slip in between the E-3 take-off sked for 11:00am for the afternoon roll.

327.70 SOF
304.80 Scorpion Ops (41st ECS)
253.50 DMAFB Tower

ABCCC is airborne, CS: Bookshelf active with Axe-Ops on 304.80mhz
Visually sighted flying out from DMAFB.

Axis-43 calling Axe-ops stating he'll be on the ground in 5 minutes
at DMAFB.

Axis-43 asked by Bookshelf-2 if he copied the emergency landing
of Compass Call. Runway was not closed, they landed ok.

Now Axe-Ops thinks it was Axis-43 that left tire behind, since it
wasn't the Comapss Call aircraft. He is currently in a low
approach requesting visual look at his landing gear.

1573. Phoenix FD freqs

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-18 00:25:02 UTC
From: John LaBua
Topic: 1573 Message: 1573

Does anyone know how the Phoenix FD freqs are allocated?

I live in Glendale and am mainly interested in monitoring the area around here. In a list obtained from somewhere else, it had a Glendale North and a Glendale South frequency listed so I programmed those two in. The alarm channel has too much traffic on it and the scanner never seems to leave so I only want what is somewhat close to home so to speak. The freqs I have have had calls from east of I-17 to way out west to the Goodyear/Avondale area.

I know that there is only one dispatch freq for most of the valley and had hoped that maybe they used tone (CTCSS/DCS) to dispatch but it doesn't seem so.

Can anyone give me a hand with this?

Thanks!

The Fire 1 channel is used for all dispatches. Only outlying areas, and airport calls use the tones. You can get to know what tone is for what unit once you listen for a while. Yes, this will be busy. It is a "Regional Dispatch Center" and dispatches for most of Maricopa County.

The rest of the channels are used for various areas of the valley, but can be reassigned in the case of major or much traffic on a certain channel.
2- Back Up Channel (Old Tactical Channel)
3- Back Up Channel (Old Tactical Channel), Commonly used for staging and aircraft landing com)
4- Mutual Aid
5- Northeast Valley Area
6- Northwest Valley Area
7- Southeast Valley Area
8- Central Valley Area
9- Southwest Valley Area
10- Far North Area
Blue 1 and 2- Chandler Area
Blue 12- Far West Area

The problem with listening to the Tactical Channels is that the system in not a repeated at a higher output so you do not usually hear the units talking to the Alarm Room unless you are relatively close to them. Another problem is that most of the communication to and from the field units is done on the via the MDT's.

Hope this helps, and Good Listening.

From: Dan Rollman
Topic: 1573 Message: 1575

John,

Another problem with monitoring only the Tac channels is that the address and call information is not given there.

Incidents are dispatched on Ch1. Units respond by hitting their "enroute" button on their MDT. They advise they are onscene by hitting their onscene button on their MDT. Alarm rarely gives an address or other info again on the Tac channel. The units have it on their MDTs, ad alarm already gave it on the dispatch on Fire1.

Most of the communication you hear on the Tac chanels is unit to unit coordination and requests to Alarm. If you didn't hear the dispatches, you would likely not know where or what exactly they are working just by hearing the Tac channel.

Dan

Hi Dave,

Not sure where you got the usage descriptions listed below for Phoenix fire, but they are not really correct.

Ch2 is a primary tactical channel for Violent Incidents where the FD is responding with PD units (Shootings, etc.), and a staging channel in some areas in the case of multiple alarms.

Ch3 is the primary tactical channel for incidents on I-10 in and around the tunnel, since there is a remote for Ch3 inside the tunnel. Ch3 is also the primary Landing Zone channel for helicopter requests.

Ch5 is used in Central Phoenix (north of downtown).

Ch7 is used in the City of Tempe only. It is only used for incidets outside the City of Tempe in fairly rare cases where Ch8 or Ch5 is tied up with high call load and a major incident. SE Valley is not the best description since areas like Sun Lakes (way further South and East than Tempe) and Ahwautukee are on Ch8, not Ch7.

Ch8 is for Downtown / South Phoeix / Ahwautukee / Sun Lakes. Ch5 is actually for Central Phoenix.

Blue-12 is for far SW, not West. It is the Buckeye repeater. Traffic in other West areas further North than Buckeye (like El Mirage and Surprise) are on 6.

Hope this helps!

The new SWFD 6 update booklet (www.scannerstuff.com) includes a MAP that shows the "general" boundaries of each tactical channel (the boundaries flex as needed in some cases).

Phoenix dispatches all assignments on Ch1 154.190 and assigns a tactical channel to an assignment depending on its location, not the department. Glendale calls will sometimes be assigned Ch9 which is the West tactical channel, & other times they will be assigned Ch6 which is Northwest. Avondale & Goodyear are usually assigned Ch9, but sometimes depending on how far south the call is they will be assigned Ch8 South.

I used to monitor Buckeye Fire & Buckeye Valley Fire on 154.980 when they were dispatched by Buckeye PD. Now that they are dispatched by Phoenix, I have to monitor Ch1 and then switch to Ch B12 for the tactical channel.

Temp,

I do not know any MOA information for UT and NV, but thanks to Wayne, I can point you in the direction of a Luke AFB official document that outlines the Sells MOA, coordinates, frequencies, types of targets, policy and procedure, etc......

It is a 6MB file, but well worth the download, if you are interested in Military Air stuff.....

http://www.luke.af.mil/rmo/aros/lukesup1.html

I believe the document also answers your question about the Feds and transiting through the area, 272.10mhz.

John

p.s. My latest spat of military air information is directly related to the fact that there are many aircraft deployed to DMAFB and are using it as a staging area to participate in the Roving Sands 01 Joint Exercise taking place at the White Sands Missile Range in NM, as well as Western Texas.

Normally, I'd be quiet except it is one of those few times when you get to hear everything, from ground attack at the range, to aerial intercepts - dogfighting, to aerial refueling, just to name a few. Yes, you can hear these normally, one event at time, but during this exercise, it's all happening at the same time. It's really fun for me, since I am doing it all on one scanner with UHF capability. I'm having fun, my wife is dreading it :)

1579. Roving Sands and Civilian Freqs

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-18 04:36:36 UTC
From: FLANO
Topic: 1579 Message: 1579

Hello all,

I've received some good feedback on the information that I was able to provide today. One of the things that I included was civilian ATC and local airport freqs. Using the civilian freqs is a good way to clean-up those nasty sounding callsigns on the military frequencies. I found that the military controllers know who they should be talking to, so the pilots can be sloppy with the pronunciation with their callsigns. But with the civilian controllers, they need to be clear. I've even heard them spell the callsign for the civilian controller, and a good number of the times, they'll even tell the controller, what type of aircraft they are flying.

Plus, monitoring the civilian freqs gives you an idea how far away the military aircraft are away from their play areas.

So, if you were wondering why I had civilian freqs mixed with the military freqs, now you know my reasoning.

Hopefully this helps you,
Thanks,
John

p.s. I'll be back to my lurking mode, as I have to work and won't be glued to the scanner :<

Topic: 1573 Message: 1581

I've also noticed, that unless an incident command requests it, most of the time Alarm will run the channels in groups of 3. Ch's. 5-7-9 and ch's. 6-8-10 will be handled by one dispatcher each. (That seems to be the common arrangement.) So, we'll hear communications from the other channel's area's even if we're not listening to that channel.

Another way I've found to catch the dispatch info, at least as far as location goes, is to switch over to 460.550 for AMT/Southwest ambulance responses to an incident. They get dispatched on 155.235, but come up on 460.550 in the West Valley, and 462.975 in the East Valley for their response, and the info gets repeated. Obviously this won't work for the departments that have their own ambo's/rescue's (Phoenix/Sun City West/Daisy Mtn./Sun Lakes), but it'll work for the other's who contract with AMT/Southwest ambo's. And I've heard/seen them at structure fire calls as well as medical incidents.

1585. RE: [ArizonaScanner] Radio Shack Trunk Tracker 800mhz

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-18 18:37:41 UTC
From: Dan Rollman
Topic: 1583 Message: 1585

Hi Anne,
Are you referring to a trunked system down there, or just public safety systems in general?

Green Valley Fire is on 154.325.
Tubac Fire is on 154.160.

Pima County Sheriff is on a trunked system that cannot currently be tracked with a trunktracker frequency and their transmissions sip around among 20 or so different frequencies.

Let us know what specifically you are looking for (if GVFD above was not what you wanted) and I'm sure we can help.

Also, check out the Southwest Frequency Directory. 400 pages of frequencies, codes, fire station resources for Green Valley and the rest of the state, written and edited by local scanner experts, not just a database without the details like other national books. See www.scannerstuff.com for details on the Southwest Freqency Directory.

Dan

--- Original Message ---

HI,
I know ya'all have much more advanced systems than this one, but
does anyone have a list of frequencies that I can use on this system
for the Tucson/Green Valley area?

Thanks,

Anne

1586. RE: [ArizonaScanner]

From: Temp Berdan
Topic: 1567 Message: 1586

Thanks John,
I just spent an hour going through the document.

First time I have seen details like that for a MOA.
Complicated and fascinating, and as I understand that newbies use the range, there is no way I would ever even consider being a resident of Ajo !!!
I?ll bet the scanning there (and where you are) is something to behold.

Unfortunately, I?m just too far north to enjoy any of the Sells or BMGR activity.

Today, my mystery AWAC on 316.700 (Dragnet) has returned and was directing activities of Mai Tai for an hour or so. I can only hear Dragnet?? and have absolutely no idea as to where he is?. which is why I inquired about the Sells MOA.

Other freqs. That are getting activity are;
272.100
308.900
381.300

Thanks again for the lead on Sells. Very interesting.

Temp

Temp,

I do not know any MOA information for UT and NV, but thanks to Wayne, I
can point you in the direction of a Luke AFB official document that outlines
the Sells MOA, coordinates, frequencies, types of targets, policy and procedure, etc......

It is a 6MB file, but well worth the download, if you are interested in
Military Air stuff.....

http://www.luke.af.mil/rmo/aros/lukesup1.html

I believe the document also answers your question about the Feds and transiting through the area, 272.10mhz.

John

p.s. My latest spat of military air information is directly related to the
fact that there are many aircraft deployed to DMAFB and are using it as a
staging area to participate in the Roving Sands 01 Joint Exercise taking place at the White Sands Missile Range in NM, as well as Western Texas.

Normally, I'd be quiet except it is one of those few times when you get to
hear everything, from ground attack at the range, to aerial intercepts - dogfighting, to aerial refueling, just to name a few. Yes, you can hear these normally, one event at time, but during this exercise, it's all happening at the same time. It's really fun for me, since I am doing it all
on one scanner with UHF capability. I'm having fun, my wife is dreading it
:)

1587. Re: [ArizonaScanner]

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-19 00:33:23 UTC
From: Wayne Cummings
Topic: 1587 Message: 1587

Hi Temp,

I am going to try to pass on all that I have related to Mil-Air in and around southern Arizona. First I would like to point you and the group to several web sites where very specific and current info came be gathered.

BMGR Operational Procedures - http://www.luke.af.mil/rmo/aros/lukesup1.html
***contains detailed range info and frequencies

Luke AFB Airfield Operations - http://www.luke.af.mil/lukeafbpublish/Publications/Luke%20Instructions/
***contains detailed info on flight operations in and out of Luke, with frequencies
***download the 11-203 & 21-110 documents

Luke AFB F-16 Procedures - http://www.luke.af.mil/lukeafbpublish/Publications/Luke%20Supplements/Luke%20Sups%20to%20AF/default.htm
***contains frequencies
***download the 11-2 document

Yuma Range - http://www.yuma.usmc.mil/Services/RANGE/Rangeweb.htm#Information%20for%20Military
***contains detailed range info and a complete table of frequencies

Digital Flight Information - http://164.214.2.62/products/digitalaero/dafifindex.html
***download the following documents
AP/1A - Special Use Airspace (MOA locations)
AP/1B - Military Training Routes (MOA frequencies) / Aerial Refueling (complete AR frequencies)
US VFR - Visual Flight Rules > lots of airfield info and frequencies - Mil & Civ
US IFR - Instrument Flight Rules > lots of airfield info and frequencies - Mil & Civ
***periodically re-download these as they are on a 56-day update cycle
***also download the AP1 , GP , & FIH which has good HF info

AMARC - http://www.dm.af.mil/amarc/33series.htm
***contains most of those callsigns heard on the DMAFB ground frequencies
***download the 33-201 document

Be warned that these sites may involve very large file downloads. I also strongly advised those interested in stopping by their local airport fixed base operator (pilot shop) and picking up the latest sectional chart for the area of interest. These are usually just a few dollars per chart. These

charts clearly outline the boundaries of all airspace including MOA,
Restricted Ranges such as BMGR and Military VR and IR routes.

Take care...

Wayne Cummings

1589. Roving Sands 01 - DMAFB Deployed Aircraft - 18 June

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-19 02:41:05 UTC
From: FLANO
Topic: 1589 Message: 1589

I took a drive on base today to see who is deployed there.
It was after the afternoon run, so should give a pretty good idea of the players:

# of Acft / Type / Base
11 F-15 Langley AFB, VA
8 F-16 Shaw AFB, NC - one had a bright orange tiger on the tail
16 F-16 Hill AFB, UT
3 B-1 Mt Home AFB, ID
1 C-130 Moody AFB, GA
2 AWACS Tinker AFB, OK
11+ F-15 Couldn't see tails

Active freqs today spotted by my wife on scanner(18 June):
276.90mhz
295.90mhz
327.70mhz
364.20mhz
272.10mhz
304.80mhz

Callsigns derived from review of my recordings today, only 40 minutes of 3 1/2 hours of voice activated recording, specific freqs unknown, suspect not all are part of the Roving Sands Exercise:

Roving Sands:
Tiger-35
Bengal-31,33,34
Actor-1,2
Zapper-13
Count- KC-135
Ram-13
Snake-15
Torch-51 (flight of four F-15's, ID'd by Tower)
Spike
Deerhunter
Dragnet (AWACS) with Gambler (F-16's deployed to DMAFB from Shaw AFB)

Other Military Air Acty:
Rappel-01,02,03 Luke AFB/F-15E, Self-identifed, left Sells MOA due to oil leak back to Luke

Photon
Scamp

From: Russell Adams
Topic: 1590 Message: 1590

I'm glad to find an Arizona Scan yahoo group. I'm taking a road trip in a couple of weeks and will be staying in the Flagstaff/Grand Canyon area. Does anybody have any PD or FD freqs for this area. I'm particularly interested in PD, Sheriff's Offices and the Arizona Highway Patrol/State Police. Will I be able to monitor Phoenix from Flagstaff? I'm also interested in good Federal and Military stuff. I joined your list a couple of weeks ago and y'all have some great info. I'm armed with a brand new Bearcat 780XLT. I like conventional and trunked monitoring, so talkgroups would be great, too. Now if I can just convince my family this is a scanning trip and not a family vacation I'll have it made (fat chance).

Thanks,
Russell

Hi Russel,

I'm assuming you're going to drive over I-40, correct? If so, here's
the main frequencies you could listen for, in order from east to west:

Apache County: 460.300 DPS District 3 (Rptr.)
460.225 DPS Statewide (Rptr.)
154.995 Sheriff Ch. 1 (Rptr.)
155.895 Sheriff Alternate (Rptr.)
453.550 Puerco Fire District (Sanders) (Rptr.)
154.130 Puerco Fire District (Sanders) (Simplex)

Navajo Nation: 154.950 Police Ch. 1 (and Fire Ops) (Rptr.)
154.980 Rangers (PD Ch. 32, aka LG-1) (Rptr.)
155.760 Rangers (Rptr.)
154.430 Fire Dispatch and Ops (Rptr.)
154.325 Fireground (Simplex)

Petrified Forest/Painted Desert: 170.050 (Rptr.)

Navajo County: 460.300 DPS District 3 (Rptr.)
460.225 DPS Statewide (Rptr.)
155.700 Sheriff Ch. 1 (Rptr.)
157.150 Sheriff Ch. 2 (Rptr.)
157.325 Sheriff Ch. 3 (Rptr.)
154.770 Sheriff Alternate (Rptr.)
155.580 Sheriff Alternate (Simplex)
158.970 Sheriff Alternate (Rptr.)
155.415 Holbrook Police Ch. 1 (Rptr.)
155.790 Holbrook Police Ch. 2 (Simplex)
154.445 Holbrook Fire Ch. 1 (Rptr.)/Ch. 2 (Simplex)
154.250 Joseph City Fire District (Simplex)
154.875 Winslow Police Ch. 1 (Rptr.)
155.520 Winslow Police Ch. 2 (Simplex)
154.415 Winslow Fire (Simplex)

Coconino County: 460.025 DPS District 2 (Rptr.)
460.225 DPS Statewide (Rptr.)
460.275 DPS CID (Rptr.)
460.500 DPS CID (Rptr.)
155.490 Sheriff Ch. 1 (Rptr.)
155.835 Sheriff Ch. 2 (Rptr.)
155.130 Sheriff Ch. 3 (Simplex)
158.775 Sheriff Tactical/Alternate (Rptr.)
154.725 Sheriff Tactical/Alternate (Simplex)
155.370 Sheriff Detectives/Surveillance (Simplex)

155.160 Search and Rescue (Simplex)
156.210 Flagstaff Police Ch. 1 (Rptr.)
156.030 Flagstaff Police Ch. 2 (Rptr.)
155.475 Flagstaff Police Ch. 3 (Simplex)
Ch. 1 153.935 Flagstaff Fire Areawide Dispatch (Rptr.)
Ch. 2 154.175 Highlands Fire Response (Rptr.)
Ch. 3 154.160 Doney Park Fire Response (Rptr.)
Ch. 4 154.220 Flagstaff Fire Tactical (Simplex)
Ch. 5 155.790 Areawide EMS Response (Rptr.)
Ch. 6 155.745 Flagstaff Fire Operations (Rptr.)
Ch. 7 153.950 Timberline-Fernwood Fire Response (Rptr.)
Ch. 8 171.550 Coconino Forest Ch. 1 South (Rptr.)
Ch. 9 168.600 Coconino Forest Tac 3 (Rptr.)
Ch. 10 154.280 Fire Mutual Aid (Simplex)
Ch. 11 169.150 Coconino Forest Air-Ground (Simplex)
Ch. 12 168.050 Coconino Forest Tac 1 (Simplex)
Ch. 13 168.200 Coconino forest Tac 2 (Simplex)
Ch. 14 154.220 Flagstaff Fire Command Repeater
Ch. 15 155.325 Flagstaff Fire Tactical (Simplex)
Ch. 16 154.040 Flagstaff Fire Training/Drills (Simplex)
Type II TG 1616 NAU Police (855.-857.2125 + 857.-858.9875)

Other State: 151.385 Game and Fish-Pinetop District (NE) (Rptr.)
151.445 Game and Fish-Flagstaff District (NC) (Rptr.)
151.460 Game and Fish-Statewide (Rptr.)
151.160 Game and Fish (Simplex)
151.190 Game and Fish (Simplex)
151.220 Game and Fish (Simplex)
151.235 Game and Fish (Simplex)
151.400 State Land Department (Rptr.)
151.415 State Land Department (Rptr.)
159.330 State Land Department Tac 1 (Simplex)
159.450 State Land Department Tac 2 (Simplex)
159.240 State Land Department Tac 3 (Simplex)
151.175 State Land Department (Simplex)
159.285 State Land Department (Simplex)
159.345 State Land Department (Simplex)

Coconino National Forest: 171.550 Ch. 1 Operations South (Rptr.)
172.300 Ch. 2 Operations North (Rptr.)
169.900 Administration (Simplex)
168.625 Air Guard (Simplex)

Meteor Crater: Unknown (Hint, hint *grin*)

Sunset Crater Volcano/: 166.350 Ops Ch. 1 (Simplex)/Ch. 2 (Rptr.)
Wupatki National Monument

Walnut Canyon National Monument: 166.300 (Simplex)

That's all I can think of and find that may be of use to you. I'm
sure the other's will add more/make corrections if needed.

John,

The only problem with assuming this, is that it would not be an efficient route from the Dallas area. Since I-20 goes through the Metroplex, I would assume that Russell and his family would take I-20 to I-10, across to Phoenix, then up I-17 to Flagstaff. So, it sounds to me like he would need Cochise County, Pima County, Pinal County, Maricopa County, and Yavapai County frequencies, in addition to the Coconino County frequencies you already gave.

Glen,

I am actually taking the northern route. I plotted both routes on three different software packages and Dallas to Amarillo to Flagstaff will only take 15 hours where the southern route down I20 to I10, through southern New Mexico and Arizona will take 22 - 24 hours. I'm still considering coming back that way, but may not have the time. Y'all have a great list with lots of good info.

Thanks,
Russell

Since I-20 goes through the Metroplex, I would assume that Russell and his family would take I-20 to I-10, across to Phoenix, then up I-17 to Flagstaff. So, it sounds to me like he would need Cochise County, Pima County, Pinal County, Maricopa County, and Yavapai County frequencies, in addition to the Coconino County frequencies you already gave.

73,

Glen N7GOT
Las Vegas, NV
(a former Flagstaff resident)

Hi Russel,

I'm assuming you're going to drive over I-40, correct? If so, here's
the main frequencies you could listen for, in order from east to west:

John has provided a great list for you below. One point I wanted to make, that was a real puzzle for me when I first moved here, is "what is DPS"??

In case you don't know it's what AZ calls its Highway Patrol!!! Thought you may not know about this. I think "AHP" (AZ Hwy Patrol) would sound much bettr but they wount listen to me!

Have a good trip and a safe one, P. S. DON'T SPEED in AZ!!! They will get ya! The speed limit is 75 on I-40 and other interstates which they feel is fast enough. They use Radar and are quite good at it as well. At 79 MPH your pushing your luck! (:-O

1597. RE: [ArizonaScanner] Re: Dallas to Arizona

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-19 16:35:06 UTC
From: Dan Rollman
Topic: 1590 Message: 1597

Actually, Arizona Highway Patrol is another valid name for the makred cars you see on the highway...

DPS is Department of Public Safety. Within that "department" are several "Divisions", including the Highway Patrol Division, Criminal Justice Support Division, Criminal Investigations Division... etc.

DPS is a large umbrella organization that has under it each of those divisions, only one of which has the responsibility to patrol highways. Many states that have a specific department just called Highway Patrol has many other large state law enforcement agencies responsible for criminal justice support, etc. that DPS does in Arizona. That's why it's called DPS and not Highway Patrol. The larger agency (DPS) that the Highway Patrol Division is one member of is responsible for much much more than just patrolling highways.

From: Glen Tubbesing
Topic: 1590 Message: 1598

I stand corrected. I just ran a Dallas to Flagstaff route on Streets & Trips and it took me up to Amarillo, then across I-40. Looks like I was assuming also! And you know that when you assume, you make an ass of you and me! ;-)

Hey, Russell, I hope you have a safe trip. The northern route should be a very pleasant one. And, if you get a chance, make a stop at Petrified Forest, too.

Glen N7GOT
Las Vegas, NV

Subject: Re: [ArizonaScanner] Re: Dallas to Arizona

Glen,

I am actually taking the northern route. I plotted both routes on three different software packages and Dallas to Amarillo to Flagstaff will only take 15 hours where the southern route down I20 to I10, through southern New Mexico and Arizona will take 22 - 24 hours. I'm still considering coming back that way, but may not have the time. Y'all have a great list with lots of good info.

Thanks,
Russell

John,

The only problem with assuming this, is that it would not be an efficient route from the Dallas area. Since I-20 goes through the Metroplex, I would assume that Russell and his family would take I-20 to I-10, across to Phoenix, then up I-17 to Flagstaff. So, it sounds to me like he would need Cochise County, Pima County, Pinal County, Maricopa County, and Yavapai County frequencies, in addition to the Coconino County frequencies you already gave.

73,

Glen N7GOT

1599. RE: [ArizonaScanner] Re: Dallas to Arizona

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-19 17:36:05 UTC
From: Jim Hagedon
Topic: 1590 Message: 1599

As a new Arizona resident, I'm curious about the Arizona Highway Patrol. Does their jurisdiction extend only to roadways and motor vehicle laws (as was the case with the Ohio Highway Patrol, where I most recently hail from), or do their police powers extend to crimes on private property (as was the case with the Michigan State Police, another of my past residences-used to get real interesting around the time of the annual Ohio State/Michigan game!)

Given their name, I would expect their powers are like the former than the latter, but I've been wrong before - really.

Just wondering -

JH

1600. RE: [ArizonaScanner] Re: Dallas to Arizona

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-19 17:54:29 UTC
From: Dan Rollman
Topic: 1590 Message: 1600

In Arizona, all "police officers" who graduate from a POST-sanctioned (that's Police Officer Standards and Training board) law enforcement accademy are certified peace officers with powers throughout the state of Arizona. DPS officers, like any local cops, have the same law enforcement powers anywhere in the state. DPS officers are not merely "traffic enforcement officers" like those you mention who may only be able to address motor vehicle laws (Title 28), but rather are both certified and authorized to enforce all state criminal laws anywhere in the state, on or off the highway.

It is much more common in more rural districts, but DPS (as in the Highway Patrol Division OF DPS) often responds as back-up, and in many cases as primary, to law enforcement matters at residences and other locations well off the highway in Arizona.

Now, don't get me wrong. DPS is not the "State Police" in the sense of the Rhode Island State Police or Massachussetts State Police whereby the County Sheriff is only responsible for warrant and court services and the State Police is responsible for emergency law enforcement outside city limits. In Arizona, the County Sheriff has the primary law enforcement power anywhere in his county. The Sheriff authorizes municipalities who elect to run their own PD to take that responsibility in most "city limits" in the state. But outside the city limits, the county sheriff is the primary law enforcer (off highways, of course. We're talking the run-of-the-mill DV call at a house on Main street). Especially in rural areas, DPS and County S.O.s work together to respond to some incidents. DPS when dispatched to a highway wreck they are quite some distance from may ask the County sheriff to check it out for them if they are closer. Likewise, if a sheriff's deputy is responding to a shooting from 120 miles away (don't laugh, it happens more than you think in a few of Arizona's counties!), he may ask if DPS has units closer that can head that way.

Hope that helps.

Dan

Subject: RE: [ArizonaScanner] Re: Dallas to Arizona

As a new Arizona resident, I'm curious about the Arizona Highway Patrol. Does their jurisdiction extend only to roadways and motor vehicle laws (as was the case with the Ohio Highway Patrol, where I most recently hail from),
or do their police powers extend to crimes on private property (as was the

case with the Michigan State Police, another of my past residences-used to get real interesting around the time of the annual Ohio State/Michigan game!)

Given their name, I would expect their powers are like the former than the latter, but I've been wrong before - really.

Just wondering -

JH

Subject: RE: [ArizonaScanner] Re: Dallas to Arizona

Actually, Arizona Highway Patrol is another valid name for the makred cars you see on the highway...

DPS is Department of Public Safety. Within that "department" are several "Divisions", including the Highway Patrol Division, Criminal Justice Support
Division, Criminal Investigations Division... etc.

DPS is a large umbrella organization that has under it each of those divisions, only one of which has the responsibility to patrol highways. Many
states that have a specific department just called Highway Patrol has many other large state law enforcement agencies responsible for criminal justice
support, etc. that DPS does in Arizona. That's why it's called DPS and not Highway Patrol. The larger agency (DPS) that the Highway Patrol Division is
one member of is responsible for much much more than just patrolling highways.

Subject: Re: [ArizonaScanner] Re: Dallas to Arizona

John has provided a great list for you below. One point I wanted to make, that was a real puzzle for me when I first moved here, is "what is DPS"??

In case you don't know it's what AZ calls its Highway Patrol!!! Thought you may not know about this. I think "AHP" (AZ Hwy Patrol) would sound much bettr but they wount listen to me!

Have a good trip and a safe one, P. S. DON'T SPEED in AZ!!! They will
get ya! The speed limit is 75 on I-40 and other interstates which they
feel is fast enough. They use Radar and are quite good at it as well. At
79 MPH your pushing your luck! (:-O

From: Glen Tubbesing
Topic: 1590 Message: 1601

Hey, Dan, don't forget one other important duty of the DPS. If I remember my Arizona Government class correctly from high school, isn't the DPS also responsible for the safety of the governor?

Just checking...

Glen N7GOT

Actually, Arizona Highway Patrol is another valid name for the makred cars you see on the highway...

DPS is Department of Public Safety. Within that "department" are several "Divisions", including the Highway Patrol Division, Criminal Justice Support
Division, Criminal Investigations Division... etc.

DPS is a large umbrella organization that has under it each of those divisions, only one of which has the responsibility to patrol highways. Many
states that have a specific department just called Highway Patrol has many other large state law enforcement agencies responsible for criminal justice
support, etc. that DPS does in Arizona. That's why it's called DPS and not Highway Patrol. The larger agency (DPS) that the Highway Patrol Division is
one member of is responsible for much much more than just patrolling highways.

1602. RE: [ArizonaScanner] Re: Dallas to Arizona

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-19 18:06:18 UTC
From: Dan Rollman
Topic: 1590 Message: 1602

Yep they sure are! Good point, Glen. I believe there are 4 or 5 officers assigned to the governor's protection detail.
Protection of members of the state legislature, I believe but am not positive, lies in the hands of Arizona State Capital Police.

Dan

Hey, Dan, don't forget one other important duty of the DPS. If I remember my Arizona Government class correctly from high school, isn't the DPS also responsible for the safety of the governor?

Just checking...

1603. New poll for ArizonaScanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-19 18:15:57 UTC
From: ArizonaScanner@yahoogroups.com
Topic: 1603 Message: 1603

Enter your vote today! A new poll has been created for the
ArizonaScanner group:

Recently Scannerstuff has received many
suggestions that we start an online
subscription-based Scanner frequency &
information "update and news" service.
This service would likely be updated
monthly, and include updates to the
Southwest Frequency Directory product,
as well as a few radio news items,
special features, brief scanner tips,
and other items. It would function much
like a scanner magazine, with a more
local Arizona focus. To sample the
response to a system like this as well
as collect valuable customer input to
use in the creation of future
Scannerstuff products, including SWFD's
7th Edition (2002) Scannerstuff will be
posting several polls on ArizonaScanner
this week. Your responses are valuable
and appreciated. Today's poll concerns
the subscription-based online scanner
information updates/news service.
Please select one of the following
responses.

o I would be interested in the service and I would be willing to pay a small monthly fee for password-protected access to it
o A service like that would not interest me; Or, I would NOT be willing to pay for a subscription

To vote, please visit the following web page:

http://groups.yahoo.com/group/ArizonaScanner/polls

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

1604. RE: [ArizonaScanner] New poll for ArizonaScanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-19 18:22:54 UTC
From: Dan Rollman
Topic: 1603 Message: 1604

I would just like to say once again that I very much appreciate the participation of the members of the ArizonaScanner community and thank all of you in advance for your input in this and the other polls that will be coming this week. I also thank those that have sent us suggestions, particularly about the online service, in the past few weeks! Scannerstuff is working harder than ever to serve the radio hobby community and alter our products and services to match what our customers most want.

To vote in this poll, go to:
http://groups.yahoo.com/group/ArizonaScanner/polls

Your vote is confidential and your identity and email address are not kept by the poll or even released to me.
Thanks again for voting in this poll!

Sincerely,
Dan Rollman
Scannerstuff, owner

1605. RE: [ArizonaScanner] Re: Dallas to Arizona

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-19 18:37:34 UTC
From: Jim Hagedon
Topic: 1590 Message: 1605

Dan:

Dan:

I appreciate the fill-in.

At the risk of getting off-topic, the situation you describe for AHP is very similar to that with the OHP (actually referred to as the Ohio State Patrol, or OSP). OSP officers have arrest powers throughout the state, provide backup for local law enforcement, are charged with investigating all crimes occurring on state property and, I almost forgot, respond to all aircraft accidents (in support of the FAA/NTSB-securing scene, identifying possible witnesses, etc.). Other than that, their job is on the highways.

The sheriff's powers are very similar (I graduated from the Montgomery County (Dayton, OH) Sheriff's law enforcement academy many moons ago). His/her authority is spelled out in the Ohio Revised Code, and supercedes city and township law enforcement. In Ohio, the sheriff is charged with operating a jail, providing court security and a civil section (serving court papers) but, interestingly, is not charged by statute with the responsibility of providing a road patrol. The sheriff is (almost) the highest law enforcement officer in the county and can only be arrested/served by the county coroner - THE highest ranking law enforcement officer in Ohio, as well as many other states, I believe (as a former coroner's investigator, I know. I actually served papers on the sheriff, my former boss, on one occasion.).

Michigan is sort of a cross between Arizona and the New England states. A more rural state than Ohio, MSP is charged with investigating crimes on private property throughout the state. Practically-speaking, I believe they do this primarily in the less-populated, unincorporated areas. I'm not sure how this works vis a vis the county sheriffs as I really wasn't that close to the situation when I lived there.

Lot's more probably boring stuff, but I'll stop here. If you are interested, we can take it off-line.

JH

To: ArizonaScanner@yahoogroups.com
Subject: RE: [ArizonaScanner] Re: Dallas to Arizona

In Arizona, all "police officers" who graduate from a POST-sanctioned (that's Police Officer Standards and Training board) law enforcement

accademy are certified peace officers with powers throughout the state of Arizona. DPS officers, like any local cops, have the same law enforcement powers anywhere in the state. DPS officers are not merely "traffic enforcement officers" like those you mention who may only be able to address motor vehicle laws (Title 28), but rather are both certified and authorized to enforce all state criminal laws anywhere in the state, on or off the highway.

It is much more common in more rural districts, but DPS (as in the Highway Patrol Division OF DPS) often responds as back-up, and in many cases as primary, to law enforcement matters at residences and other locations well off the highway in Arizona.

Now, don't get me wrong. DPS is not the "State Police" in the sense of the Rhode Island State Police or Massachussetts State Police whereby the County Sheriff is only responsible for warrant and court services and the State Police is responsible for emergency law enforcement outside city limits. In Arizona, the County Sheriff has the primary law enforcement power anywhere in his county. The Sheriff authorizes municipalities who elect to run their own PD to take that responsibility in most "city limits" in the state. But outside the city limits, the county sheriff is the primary law enforcer (off highways, of course. We're talking the run-of-the-mill DV call at a house on Main street). Especially in rural areas, DPS and County S.O.s work together to respond to some incidents. DPS when dispatched to a highway wreck they are quite some distance from may ask the County sheriff to check it out for them if they are closer. Likewise, if a sheriff's deputy is responding to a shooting from 120 miles away (don't laugh, it happens more than you think in a few of Arizona's counties!), he may ask if DPS has units closer that can head that way.

Hope that helps.

Dan

Subject: RE: [ArizonaScanner] Re: Dallas to Arizona

As a new Arizona resident, I'm curious about the Arizona Highway Patrol. Does their jurisdiction extend only to roadways and motor vehicle laws (as was the case with the Ohio Highway Patrol, where I most recently hail from),
or do their police powers extend to crimes on private property (as was the case with the Michigan State Police, another of my past residences-used to get real interesting around the time of the annual Ohio State/Michigan game!)

Given their name, I would expect their powers are like the former than the latter, but I've been wrong before - really.

Just wondering -

JH

1606. Re: [ArizonaScanner] New poll for ArizonaScanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-19 19:46:01 UTC
From: August Hoecker
Topic: 1606 Message: 1606

Hey what a great idea, sign me up! If the annual fee is reasonable I would love to know that I am never more than 30 days away from being 100% up to date.

As fast as new radio systems are hitting the air waves, with constant frequency changes and additions this is the way to "Keep UP"!

Perhaps I'm Internet spoiled but in this day and age I don't want to wait a year or even 6 months for new frequency info. Once a month sounds great. The additional articles and other items of interest to we scanner types seems like icing on the cake!

I would like to see what others have to say as well as my 2 cents worth!

Thanks ScannerStuff
August

Dan -
One more comment about DPS; they are also responsible for maintenance of the state radio system (as I'm sure our friend Walter would be quick to point out) in their Telecommunications division, or TCD. Also, the Gang Intervention Tactical Enforcement Model or GITEM, is responsible for identifying and apprehending gang members statewide. For further info, please visit their website at http://www.dps.state.az.us/classic.htm.
The DPS mission is far ranging and impacts every citizen of the state of Arizona. I'm sure the only contact most citizens ever have with DPS is through the Highway Patrol. Perhaps they are unaware of the DPS mission, and it's enforcement powers, but it's your tax dollars at work, folks. As a former employee of this department, I am proud to remind all of the citizens of Arizona of AZDPS, and AHP, and how they serve each of us. Monitoring DPS communications is a never ending source of law enforcement officers in action. I recommend it highly.

73's to all

Bob

To All,

I would like to apologize for an oversight on my part. The info that I posted for the Dallas to Arizona post should have included a note that I had gotten the info from the SWFD book. By not including that notice, it could have been seen as a copyright infringement, which was not my intent. I was solely trying to respond to a request for the information.

Again I apologize to Dan and everyone else who has spent countless hours of their own time, and money, compiling the SWFD, and I thank them for their efforts.

John,

I have heard of this directory and been to the web site. I was considering getting one, but didn't want to put down $30 just for one trip. Does it cover more than Arizona? From what I have seen, it sounds like a great directory. I'll be in the area in a couple weeks ... it there a retail outlet in the Flagstaff area that I can get a good look at one?

Thanks for responding to my initial request, it was exactly what I was looking for. Y'all have a great list and are a wealth of information. I appreciate all the responses I have received.

Thanks,
Russell

1612. Re: [ArizonaScanner] Re: Dallas to Arizona: Texas DPS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-21 01:08:56 UTC
From: Russell Adams
Topic: 1612 Message: 1612

It sounds like Arizona DPS is a lot like Texas DPS. Texas DPS has several divisions including Traffic Enforcement, which includes the Highway Patrol and the License and Weights Division; Criminal Law Enforcement Division; and the Texas Rangers. They are also responsible for the protection of the Governor and Lieutenant Governor and the Capitol Police in Austin.

Texas Law Enforcement officers require certification from the Texas Commision on Law Enforcement Officers and Security Officers (TCLEOS). They have enforcement powers anywhere in the state of Texas, regardless of the jurisdiction.

DPS has very broad authority. Made up mostly of State Troopers (Highway Patrol) they patrol the highways and provide law enforcement coverage much like Arizona's DPS. They work closely with county Sheriff's swapping calls, operating on Sheriff's Office frequencies much of the time. More than just traffic enforcement they answer all types of calls, especially in the less urban areas. Since they operate on the county's frequencies as well their own, you will hear them answering any type of call. Additionally, they are responsible for investigating air crashes, train crashes, boating accidents, etc. and secure the scenes if the NTSB is to get involved. They have the best chases and the deal with them without messing around.

Texas DPS also issues Driver's Licenses and Concealed Handgun Licenses. License and Weight Division is also repsonsible for weighing trucks on the highways, etc. (a trucker's nightmare).

Texas DPS also has Metro Divisions, Aircraft Divisions, and they operate the state communications system for multiple agencies under the States control. Most state university police officers are DPS officers.

Texas DPS is authorized for around 3000 sworn officers and all of them are very well trained and very professional.

Texas DPS maintains a very nice website at http://www.txdps.state.tx.us.

Dan:

Dan:

I appreciate the fill-in.

At the risk of getting off-topic, the situation you describe for AHP is very similar to that with the OHP (actually referred to as the Ohio State Patrol, or OSP). OSP officers have arrest powers throughout the state, provide backup for local law enforcement, are charged with investigating all crimes occurring on state property and, I almost forgot, respond to all aircraft accidents (in support of the FAA/NTSB-securing scene, identifying possible witnesses, etc.). Other than that, their job is on the highways.

The sheriff's powers are very similar (I graduated from the Montgomery County (Dayton, OH) Sheriff's law enforcement academy many moons ago). His/her authority is spelled out in the Ohio Revised Code, and supercedes city and township law enforcement. In Ohio, the sheriff is charged with operating a jail, providing court security and a civil section (serving court papers) but, interestingly, is not charged by statute with the responsibility of providing a road patrol. The sheriff is (almost) the highest law enforcement officer in the county and can only be arrested/served by the county coroner - THE highest ranking law enforcement officer in Ohio, as well as many other states, I believe (as a former coroner's investigator, I know. I actually served papers on the sheriff, my former boss, on one occasion.).

Michigan is sort of a cross between Arizona and the New England states. A more rural state than Ohio, MSP is charged with investigating crimes on private property throughout the state. Practically-speaking, I believe they do this primarily in the less-populated, unincorporated areas. I'm not sure how this works vis a vis the county sheriffs as I really wasn't that close to the situation when I lived there.

Lot's more probably boring stuff, but I'll stop here. If you are interested, we can take it off-line.

JH

From: Dan Rollman [mailto:danrollman@...]
Sent: Tuesday, June 19, 2001 10:54 AM
To: ArizonaScanner@yahoogroups.com
Subject: RE: [ArizonaScanner] Re: Dallas to Arizona

In Arizona, all "police officers" who graduate from a POST-sanctioned (that's Police Officer Standards and Training board) law enforcement accademy are certified peace officers with powers throughout the state of Arizona. DPS officers, like any local cops, have the same law enforcement powers anywhere in the state. DPS officers are not merely "traffic enforcement officers" like those you mention who may only be able to address motor vehicle laws (Title 28), but rather are both certified and authorized to enforce all state criminal laws anywhere in the state, on or off the highway.

It is much more common in more rural districts, but DPS (as in the Highway Patrol Division OF DPS) often responds as back-up, and in many cases as primary, to law enforcement matters at residences and other locations well off the highway in Arizona.

Now, don't get me wrong. DPS is not the "State Police" in the sense of the Rhode Island State Police or Massachussetts State Police whereby the County Sheriff is only responsible for warrant and court services and the State Police is responsible for emergency law enforcement outside city limits. In Arizona, the County Sheriff has the primary law enforcement power anywhere in his county. The Sheriff authorizes municipalities who elect to run their own PD to take that responsibility in most "city limits" in the state. But outside the city limits, the county sheriff is the primary law enforcer (off highways, of course. We're talking the run-of-the-mill DV call at a house on Main street). Especially in rural areas, DPS and County S.O.s work together to respond to some incidents. DPS when dispatched to a highway wreck they are quite some distance from may ask the County sheriff to check it out for them if they are closer. Likewise, if a sheriff's deputy is responding to a shooting from 120 miles away (don't laugh, it happens more than you think in a few of Arizona's counties!), he may ask if DPS has units closer that can head that way.

Hope that helps.

Dan

Subject: RE: [ArizonaScanner] Re: Dallas to Arizona

As a new Arizona resident, I'm curious about the Arizona Highway Patrol. Does their jurisdiction extend only to roadways and motor vehicle laws (as was the case with the Ohio Highway Patrol, where I most recently hail from),
or do their police powers extend to crimes on private property (as was the case with the Michigan State Police, another of my past residences-used to get real interesting around the time of the annual Ohio State/Michigan game!)

Given their name, I would expect their powers are like the former than the latter, but I've been wrong before - really.

Just wondering -

JH

To: ArizonaScanner@yahoogroups.com
Subject: RE: [ArizonaScanner] Re: Dallas to Arizona

Actually, Arizona Highway Patrol is another valid name for the makred cars you see on the highway...

DPS is Department of Public Safety. Within that "department" are several "Divisions", including the Highway Patrol Division, Criminal Justice

Support
Division, Criminal Investigations Division... etc.

DPS is a large umbrella organization that has under it each of those
divisions, only one of which has the responsibility to patrol highways.
Many
states that have a specific department just called Highway Patrol has many
other large state law enforcement agencies responsible for criminal
justice
support, etc. that DPS does in Arizona. That's why it's called DPS and not
Highway Patrol. The larger agency (DPS) that the Highway Patrol Division
is
one member of is responsible for much much more than just patrolling
highways.

John has provided a great list for you below. One point I wanted to
make, that was a real puzzle for me when I first moved here, is "what is
DPS"??

In case you don't know it's what AZ calls its Highway Patrol!!! Thought
you may not know about this. I think "AHP" (AZ Hwy Patrol) would sound
much bettr but they wount listen to me!

Have a good trip and a safe one, P. S. DON'T SPEED in AZ!!! They will
get ya! The speed limit is 75 on I-40 and other interstates which they
feel is fast enough. They use Radar and are quite good at it as well. At
79 MPH your pushing your luck! (:-O

1613. Re: [ArizonaScanner] Re: Dallas to Arizona: Texas DPS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-21 01:18:19 UTC
From: August Hoecker
Topic: 1612 Message: 1613

Hey Russell thanks for the info. I have one question that has been bugging me for years and perhaps you can help? Just who are the Texas Rangers??? What authority do they have??? Are they like a state police agency or???

Do you know their history? I would sure be interested in knowing.

BTW, my spouse watches "Walker TX Ranger" each week and I almost get sick! I go hide in the den but I can still hear 'em!

Thanks in advance,
August
W8MIA

1614. Re: [ArizonaScanner] Re: Dallas to Arizona: Texas DPS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-21 02:34:35 UTC
From: Russell Adams
Topic: 1612 Message: 1614

The Texas Rangers are 107 "Special Agents" of the Texas Department of Public Safety. They are the best of the best. They receive additional training in investigative techniques, etc. The are basically the Special Investigations division. While they are Texas law enforcement officers, it is not unusual for them to travel outside the state of Texas while investigating crimes or in pursuit of fugitives. If you have committed a crime and a Ranger is after you, he will get you. This is not pride or arrogance, these guys are just very, very good at what they do, they have a lot of character, a very powerful presence, and they are no bull.
If you remember the "Texas Seven" who escaped from a high security Texas Prison (Texas Department of Corrections (TDC) is not part of DPS), Texas Rangers were involved in their pursuit and capture even though they were in Colorado. The Rangers also transported the ones that lived back to Texas.

They have a page on the DPS web site at
http://www.txdps.state.tx.us/director_staff/texas_rangers/index.htm.

Russell

Hey Russell thanks for the info. I have one question that has been
bugging me for years and perhaps you can help? Just who are the Texas
Rangers??? What authority do they have??? Are they like a state police
agency or???

Do you know their history? I would sure be interested in knowing.

BTW, my spouse watches "Walker TX Ranger" each week and I almost get
sick! I go hide in the den but I can still hear 'em!

Thanks in advance,
August

1615. Re: Dallas to Arizona: Texas DPS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-21 03:47:05 UTC
From: BD18PACKER@aol.com
Topic: 1612 Message: 1615

Russell
Thanks for the info on the Texes Rangers. Your comments are right on, and accurate. The Texas Rangers are the oldest law enforcement agency in Texas; legendary exploits abound. As a relative of a former Texas Ranger, I will say that I concur, they are "The best of the best".

BD
--- In ArizonaScanner@y..., Russell Adams <rwadams@t...> wrote:
> The Texas Rangers are 107 "Special Agents" of the Texas Department of Public Safety. They are the best of the best. They receive additional training in investigative techniques, etc. The are basically the Special Investigations division. While they are Texas law enforcement officers, it is not unusual for them to travel outside the state of Texas while investigating crimes or in pursuit of fugitives. If you have committed a crime and a Ranger is after you, he will get you. This is not pride or arrogance, these guys are just very, very good at what they do, they have a lot of character, a very powerful presence, and they are no bull.
> If you remember the "Texas Seven" who escaped from a high security Texas Prison (Texas Department of Corrections (TDC) is not part of DPS), Texas Rangers were involved in their pursuit and capture even though they were in Colorado. The Rangers also transported the ones that lived back to Texas.
>
> They have a page on the DPS web site at http://www.txdps.state.tx.us/director_staff/texas_rangers/index.htm.

How come when Walker Texas Ranger shoots his gun (about once in every 10
shows) and fires about 3 clips worth there is never a hole in anything
and no one ever bleeds on that show??? (:-O

1618. Unusual Trunk ID

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-21 07:44:44 UTC
From: Nick
Topic: 1618 Message: 1618

I'm out in Fountain Hills, and I listen in on Scottsdale PD. The FH Marshalls share the same system, but with different trunk ID's. The past couple of days, I noticed a new ID come up for what sounds like FH traffic - 1456.
Anyone know if this is just the Marshalls, or possibly Scottsdale PD using an odd freq, or could it be the MCSO (which provides most of the enforcement services for FH) now using the system? BTW, the ID comes up the same on both of my trunktracker scanners.

Also, how are the other local law enforcement agencies and MCSO communicating (aside from what I heard someone at Ham Radio Outlet say - "not well")? I figure there must be an interagency freq, but the ones in the book never seem to have much traffic.

Thanks,

Nick
FH, AZ

1619. Re: [ArizonaScanner] Unusual Trunk ID

Yahoo group: ArizonaScanner (1999 — 2002)

From: Charles Simmont
Topic: 1618 Message: 1619

The person at HRO is about right. Other agencies are not able to talk on the radio with MCSO very well at all. MCSO only has an 800mhz digital radio and a few of them have the VHF radio for 159.090 (old Ch8). I believe the UHF radios are gone since they no longer own the frequencies. Many times what I have heard happens is that messages are relayed through the dispatchers. PhxPD unit radio's his dispatcher and gives them a message for MCSO. The Phx dispatcher gets on the phone and calls the SO and their dispatcher then relays the message over the 800mhz radio. Being as most agencies don't have 800Mhz capability and thats about the only thing MCSO has, kinda leaves a gap!

1620. RE: [ArizonaScanner] Unusual Trunk ID

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-21 16:19:06 UTC
From: Steven Gibbs - SHERIFFX
Topic: 1618 Message: 1620

Mr. Simmont, I am the Radio System Support Tech for MCSO. To answer some of your
concerns on interoperability with other agencies MCSO had left the Spectra UHF mobile
radio install in field patrol vehicles. This in fact does give us direct communication
with other valley agencies that are not currently working on the 800MHz band. MCSO does
monitor the UHF/VHF interagency frequency 24/7 along with 800MHz interagency USA-1. So we
in fact can talk to other agencies via our radio consoles and directly in patrol vehicles.
We also have the capability to patch the Interagency frequency to an 800 Talkgroup if necessary.

Of course using the phone has always been the most common method of relating information
between agencies, it has been done this way the past 22 years I have been with MCSO.

Hope this helped answer some of you concerns/questions.

Steven Gibbs
System Support Technician
MCSO

Concerns & questions, I had neither. I was simply stating some of the facts I had acquired from the scanner. The radio waves don't lie. I have on more than one occasion heard departments express their frustration at not being able to communicate with MCSO ground and air units due to the different radio systems.

1622. New poll for ArizonaScanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-21 20:12:17 UTC
From: ArizonaScanner@yahoogroups.com
Topic: 1603 Message: 1622

Enter your vote today! A new poll has been created for the
ArizonaScanner group:

This poll is for current owners of the
Southwest Frequency Directory 6th
Edition. Please select one option for
EACH of the "sections" of responses
(i.e. Fire Station Resources) to
indicate your preferences on the
material to be included in the future
SWFD 7th Edition (2002). Your responses
will indicate to Scannerstuff what
material people value and should be
strengthened and what material people
do not value and could be condensed or
removed. We encourage you to send
detailed feedback to us at
info@...! THANK YOU for
your input!

o FIRE STATION LOCATIONS & RESOURCES - I highly value this information
o FIRE STATION LOCATIONS & RESOURCES - I somewhat value this information
o FIRE STATION LOCATIONS & RESOURCES - I do not value this information
o POLICE RADIO CODES / UNIT DESIGNATORS - I highly value this information
o POLICE RADIO CODES / UNIT DESIGNATORS - I somewhat value this information
o POLICE RADIO CODES / UNIT DESIGNATORS - I do not value this information
o NON-PUBLIC-SAFETY LOCAL GOVERNMENT FREQUENCIES - I highly value this information
o NON-PUBLIC-SAFETY LOCAL GOVERNMENT FREQUENCIES - I somewhat value this information
o NON-PUBLIC-SAFETY LOCAL GOVERNMENT FREQUENCIES - I do not value this information
o AIRPORT FREQUENCIES - I highly value this information
o AIRPORT FREQUENCIES - I somewhat value this information
o AIRPORT FREQUENCIES - I do not value this information
o SPECIFIC AIRLINE COMPANY FREQUENCIES - I highly value this information
o SPECIFIC AIRLINE COMPANY FREQUENCIES - I somewhat value this information
o SPECIFIC AIRLINE COMPANY FREQUENCIES - I do not value this information
o NOAA WEATHER RADIO - I highly value this information
o NOAA WEATHER RADIO - I somewhat value this information
o NOAA WEATHER RADIO - I do not value this information
o MILITARY FREQUENCIES - I highly value this information
o MILITARY FREQUENCIES - I somewhat value this information
o MILITARY FREQUENCIES - I do not value this information
o DISTRICT / PRECINCT / COVERAGE MAPS - I highly value this information
o DISTRICT / PRECINCT / COVERAGE MAPS - I somewhat value this information
o DISTRICT / PRECINCT / COVERAGE MAPS - I do not value this information

To vote, please visit the following web page:

http://groups.yahoo.com/group/ArizonaScanner/polls

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

1623. RE: [ArizonaScanner] New poll for ArizonaScanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-21 21:01:13 UTC
From: Temp Berdan

1624. New poll for ArizonaScanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-21 21:09:42 UTC
From: ArizonaScanner@yahoogroups.com
Topic: 1603 Message: 1624

Enter your vote today! A new poll has been created for the
ArizonaScanner group:

This poll is for owners of Southwest
Frequency Directory products or those
who plan to purchase SWFD-7 next year.
Please select any of the following you
would VERY MUCH like to see ADDED to
SWFD-7. Please send your suggestions
not listed here to
info@.... Thanks for your
input!

o Information on Repeater LOCATIONS
o Additional sub-audible CTCSS (PL) tones
o Expanded Scanner User's Guide
o Detailed discussions of public safety agency operations
o More radio terms / abbreviations / acronyms explained
o More detailed information on the operations of police & medical helicopters
o County map at start of each county section
o More detailed airport information (runway titles, elevation, etc.)
o Weather Alert FIPS Codes for use with advanced scanners like the Uniden BC780
o AM/FM Radio Stations / Location / Format
o More cities covered by 1-page Travel frequency lists
o Section Tabs with section name protruding from side of book
o Several "Fold Out" pages to make maps larger than 8" by 5"
o More detailed amateur radio repeater coverage
o PLEASE SEND OTHER SUGGESTIONS TO INFO@... !

Hi Temp,

If you go directly to:

http://groups.yahoo.com/group/ArizonaScanner/polls

You should be able to click each of the 3 polls that are currently open.
I just tried, and it does have each poll listed.

Thanks to everyone for your participation in these polls!

Dan

1626. New Tolleson Engine

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-22 14:05:06 UTC
From: John H. Guetherman
Topic: 1626 Message: 1626

Sorry this is kinda last minute. In Wednesday's Arizona Republic, there was a notice that Tolleson FD wil be showcasing it's new pumper this morning at 10:00am in front of the Boys and Girls Club, 9251 W. Washington, in Tolleson.

Just thought ya'll might like to go down to see it if you have the time to do so. Again, sorry I didn't post it Wednesday like I was going to.

John.

1634. MilAir #8 - UHF tac frequencies...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-22 17:16:41 UTC
From: Wayne Cummings
Topic: 1634 Message: 1634

Confirmed list of UHF air-to-air tactical frequencies for SE Arizona:

229.0500 Air to Air Tactical
233.4750 Air to Air Tactical
235.6500 Air to Air Tactical
236.0750 Air to Air Tactical
238.3500 Air to Air Tactical
238.6000 Air to Air Tactical
240.1000 Air to Air Tactical
242.4000 Air to Air Tactical
245.5000 Air to Air Tactical
251.9750 Air to Air Tactical
257.5000 Air to Air Tactical
260.2750 Air to Air Tactical
267.1500 Air to Air Tactical
268.1000 Air to Air Tactical
279.2000 Air to Air Tactical
299.5000 Air to Air Tactical
303.0000 Air to Air Tactical
311.1000 Air to Air Tactical
333.3000 Air to Air Tactical
357.0000 Air to Air Tactical

All frequencies are AM. Some of these are quite interesting and will give you an idea of what goes on in the backend of those AWACS & EC-130's flying around all the time...

Wayne,
Thanks for the great freqs.
Darkstar is up on 279.200 doing his thing @ 10:43 AM.

Can only hear Darkstar? who is IDing targets ?5 miles north of the
border?.

Temp,

Your welcome. I have been promising Dan R. that I would get him the MilAir info that I have for a long time, maybe even years. I thought I would use this forum as a way to get it to everyone interested. I do not know very many listeners in Southern Arizona who are interested in the MilCom or MilAir hobby, so maybe this will bring out the lurkers like myself. I have several more posts to the group with the rest of the frequencies still to come. The data is having to be cut and pasted out of the radio control programs. I am trying to send only the info that has been personally verified. I have a lot of stuff that gets periodic short traffic that is unidentified or has not been backed up by other sources, that I will keep out of these posts.

The following link is on topic and interesting:
http://www.azstarnet.com/star/thu/10621JTF6.html

Take care...
Wayne

Brian,

Keep in mind that Surprise PD uses the Maricopa County Trunked system on White Tanks Mountain. There are far too many users on the system to list here. See the new SWFD "Update Booklet" (www.scannerstuff.com) for a new massive listing of Maricopa County TRS talkgroups and users including MCSO, Transportation, Parks, Animal Control, Probation, and many many more.

Dan Rollman

Wayne :)

Wow! I thought that I had a fair amount of air traffic captured,
but, I bow to you :) Thanks for the updates. Looks like I'll need
a couple more scanners, just to be sure.

Please let me know if you'd like to coordinate capturing an event.
Or specific freqs needing to be watched. I will be happy to sit on
the freq and record it.

Many Thanks for your help with frequencies and websites,
John

1646. Other Ideas for SWFD 7

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-24 11:06:52 UTC
From: John H. Guetherman
Topic: 1646 Message: 1646

Just a couple of ideas that have come to mind:

Wildland fire: USFS/NPS/BLM/etc. resources list(s); fire tower locations. (Maybe a seperate section for the forests/parks/BLM lands/etc.?)

General firefighting: Definition of engine types [Type 1-to-Type 6 (higher?)]. Which department has which types and their apparatus numbers. Definitions/explanations of other, perhaps specialized, apparatus.

Web sites: URL's for official (and good unofficial) federal/state/county/municipal websites, and the agencies/departments within them. Maybe the website's related to other sections, such as media, Amateur radio, and NOAA/NWS offices.

Travel areas: New Mexico. At least along Interstates 10, 25, and 40. (Meaning Santa Fe, Albuquerque, and Las Cruces at least.) The websites I've seen for Albuquerque only show the raw data basically. Not much more than a cut-and-paste of FCC info, possibly from Police Call, it looks like. Very few channel numbers, no talk groups. I realise of course, you'd need contributers who actually live there in order to get the info, which may explain why you don't have it. Perhaps the El Paso, Texas area, also?

I wanted the other's to be able to comment on these ideas, which is why I posted them here, instead of just by email.

Hi,

I am a Michigander who is soon to be an Arizonian (?)... Coming from Michigan I have one question (so far). Here it is illegal to have a scanner in your vehicle. This law does not apply to amateurs or people of law enforcement. In Arizona is it illegal to have a scanner in the car? I have gone through every posting on this list and could not find a single discussion about an Arizona scanner law. As always, thanks in advance for the info and I look forward to chatting with everyone on the list...

Hi John,

All of those ideas sound great. We'll be working to implement them. The NIFC Engine Type List (1-6) was intended to be in SWFD6 but didn't make it. The others are good ideas as well.

I appreciate everyone's participation in the polls and all the ideas I've received at info@... as well! Please continue to send them along as we finish up the plans for SWFD7 and begin writing and editing!

Hi Kevin,
I have read at least one other answer to your request and that is basically the answer NO!!! AZ and its people don't play a lot of silly games out here! I lived in CA for 20+ years, that's "Game Land", USA!!!

Having lived in Grand Rapids myself for a time I know you will feel like a free person out here in our desert and mountains! AZ folks seem to have a great respect for their neighbors and their privacy.

You will also find the folks out there are very friendly, have a good sense of humor and will be very helpful in a time of need. YES, we have a few Yo-Yo's here and there but very few.

BTW, where in AZ are you moving to?? Are you going to work for a new company out here? Also let us know how your coming to AZ if your driving i.e.: I-40 to I-17 or I-70 to I-15 to Las Vegas, etc.. We ould then give you any frequency info you may need.

I hope this helps. P.S I filled up my gas tank yesterday at $141.9 for regular. How does that compare with MI prices??

Hi August,

I see you☐ve got a region 8 call. :-) I won☐t be alone! I will be moving to Phoenix, AZ in August. I will be making several trips between now and then, my first one being tomorrow for a few days to go ☐exploring☐. My company offered to relocate me so I said sure. The new office will be in Ahwatukee (sp?). I will be working for the same company, Global Crossing. I only have a few apprehensions about the move, the first one being heat I think anything over 80 is hot. :-) My other concern is with the ☐wildlife☐ you guys have. Snakes, lizards, scorpions, huge cockroaches and tarantulas I am interested to see what kind of skywarn programs are out there and how it differs from ours here in Michigan. And let☐s just say, I☐ll be saving a lot of money on gas it☐s on average $1.81 per gallon of regular, premium is well over $2.00 I appreciate your offer for frequencies! I have noticed that the counties in Arizona are MUCH larger than the ones here. How does the sheriff office dispatch deputies to the different parts of the county? How do they manage to cover the whole county? I guess that is a big mystery to me! Anyways, I☐m gonna say 73☐s and start packing.

Kevin ☐ KC8QBS
Westland, MI

Steve,
It was at the local ARCO station in Kingman, AZ (about 10 miles from my house off interstate 40 at exit 51. Most stations are priced some what higher from 145.9 to 154.9. This is 87 octane, regular unleaded fuel. I do not know if Regular-Regular "Leaded" gas is around any more. Usually 3 grades all unleaded: 87, 91 & 93.

I use 87 in all of my cars even my new Honda Accord. The book says that's what to use.

BTW, when are you coming this way and where are you going to at the end of the trip out?
August

OK Kevin,
I changed from a "0" call to the "8" call when I lived in Grand Rapids in the late 70's. The FCC had a special short term deal to replace your old call with a new call of the same format. For example my first call was "K1FHZ" MA and I had changed it to a "2" call in NY then later to a "0" call in Colorado.

The FCC then issued me my W8MIA call to replace my old K1 call of the same format! This story is not over yet. When I left GR I moved to the Los Angels area and had always wanted a "6" call and I got one "N6LQK" which I never liked, hat was about 1978 or so. I then changed it back to W8MIA several years ago under the new "Pay as U go License Rip Off" for only $30! Aren't you sorry you asked!

OK on Phoenix. It is much warmer in Phoenix than it is in the northern part of AZ. About 10 to 12 degrees cooler here. In Kingman a hot day is about 103 or so. The record high for this area is 113 back about 30 years ago. In Phoenix on the other hand 103 is a cool day in the summer months. Summer in AZ is between May 1st and October first or later!! August is the hottest month. 120 degree temps in Phoenix are not unusual at all.

Yes we do have creepy crawlers here and the further south you go (like Phoenix) the bigger the seem to get. In most urban areas there are not that many snakes but the desert is right in your back yard!

I have yet to see a large scorpions or a rattle snake but I have only lived here for 1.5 years! Other snakes (bull snakes), lizards and huge cockroaches abound! Tarantulas are also here some where but I haven't gone looking for them!! (:-)

You quickly learn to keep looking around as you go. You never go into your shed without making lots of noise and you don't reach around into "Blind Corners" with your fingers. That could be trouble city! There is no "Hang Up" in AZ when it comes to firearms. Whenever you are in the field just take your 9 mm or 10 mm Gloch with you. It is quite straight forward to get a concealed weapon permit in AZ so you can carry it under your shirt and not look like "Walker Tx Ranger" as you go! I usually load the first 3 rounds with snake shot then the "good stuff" for the balance of the clip.

Kevin, who is Global Crossing (new to me) what do they do and what is your job?
I have little knowledge of "SkyWarn" but I am sure others who may read this can help you out.

You will find out that the gas prices in Phoenix tend to be more expensive than up north along the I-40 corridor but cheap compared to MI. You will also discover that auto insurance, license plates, home insurance and labor intensive work will cost less than where you are. When I moved from CA to AZ (ca is super high priced of course) my auto insurance dropped from $1350 a year, 2 cars to $644 for more coverage, lower deductibles!!! My home owners insurance did about the same thing.

Yes Kev our counties are quite large in size. I think we only have about 13 counties in the state, could be more?? As far as law enforcement coverage goes Phoenix has its own rather large PD. At the county level through out the state it is not that unusual to hear ETA's of 15 to 30 minutes on the radio. The AZ Hyw Patrol also cooperates a great deal in many of the wide open counties. The Forest Rangers will even get involved. In some areas there is a lot of cooperation between mutual counties that will at least cover the scene until the right sheriff gets there. Lots of helicopters as well.

Just remember Phoenix is a very up to date rather Hi Tech city with lots of great restaurants and places to go but it also has most of the problems of any large city.
Good luck on your visit trips. Don't forget, when your ready to move, this list is here to give you any frequency help you'll ever need.
Have a good trip,
August

August:

I agreed with almost everything in your note to Kevin, but license plates? Yikes!! I've also lived in Michigan, as well as Ohio. In Ohio, I paid $35 per car for tags -- $5 more if I my wife and I wanted our ham calls. In Arizona, I'll be paying close to $1, 000 per year for a 1998 sedan and a 2001 SUV. Michigan was a bit higher than Ohio when I lived there about ten years ago, and I believe they do base their fees on vehicle valuation, but Arizona was a real shock.

Insurance may be a better deal in Phoenix, but it nearly doubled for us in Tucson. They told us that was due to our proximity to the border. Stolen vehicles can be in Mexico in an hour, which doesn't say much for our law enforcement on the border (like I should be shocked).

Still, Michigan or Ohio, I'd rather be in Arizona!

JH

Without turning this into a tax lesson, you can deduct MOST of what you pay for Arizona license plates off your Federal taxes if
you can itemize.

John

Folks, let's do our best to keep this list on topic.

This thread started out just fine, and for the most part has been fine (nothing wrong with helping a hobbyist moving to the area) but make sure your posts address the scanner / public safety topic in addition to the off-topic type stuff. I doubt anyone has a problem with chatting about weather, gun laws, rattlesnakes, ham radio callsigns, gas prices, and taxes, as long as they are all just a small sidenote in your message to the primary conversation of scanning and public safety operations. If your post includes off-topic subjects like those listed above without any substantial radio-hobby-related talk, no problem... Just send it to the individuals involved in the conversation, not to the whole list.

Shouldn't take more than 60 seconds to put the private email addresses of August, Stephen, Kevin, Ed, Jim, and John in the to: line of a message, rather than including the other 250+ members of the list as well. Again, if your post includes useful, informative material directly related to scanning and public safety (even if it has a little off-topic chatter along with it), than by all means post it right here.

Thanks everyone for your cooperation!

Dan Rollman / KC7ANQ
List Operator

Hi folks,

I'm going to conclude the three open scanner-related polls tomorrow, Tuesday, June 26th. If you have not already filled out the surveys for the next edition of the Southwest Frequency Directory (due in mid 2002) I'd appreciate your input!

Just go to http://groups.yahoo.com/group/ArizonaScanner/polls and click on each poll to place your preferences.

Additionally, you can send other suggestions to info@...

We're also continuing to collect reader updates. If you have updates, additions, corrections, etc. to the 6th Edition SWFD, please send your material to us at updates@... for inclusion in SWFD-7. In your email, please state whether I can use your name in the "contributors" section of SWFD. As I have always done since the beginning of SWFD, those who contribute large amounts of useful material (i.e. that we didn't already have) that is used in SWFD7 may be entitled to a discounted or complimentary copy of the book next year... on a case by case basis.

Again, please participate in the polls at http://groups.yahoo.com/group/ArizonaScanner/polls and send your SWFD updates to updates@....

Thanks everyone for your help!

Regards,

Dan Rollman
SWFD Editor

1663. Tucson FD F-4 & F-5...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-27 03:43:36 UTC
From: Wayne Cummings
Topic: 1663 Message: 1663

Effective July 2 @ 0800 the following changes will occur w/ TFDs channels:

F-1 EMS incidents north of the centerline of Broadway Blvd
F-4 EMS incidents south of the centerline of Broadway Blvd
F-5 Code Administration

The rest of the assigned channels will stay the same. F-5 can also be used in the repeat disabled mode for the relaying of sensitive messages as needed or requested. Call loads may dictate changes to the assigned response frequency.

Here are a few frequencies that i have confirmed active that i didn't see in Waynes very impressive list.

265.700 apache control
226.300 apache flight test
293.100 pilot to pilot
288.200 air combat
238.400 air combat
379.200 air combat
281.000 raider base
314.750 pilot to pilot
286.200 pilot to pilot
352.300 air combat
347.850 active no id
371.100 air combat
391.800 air refueling
237.850 air combat
293.100 pilot to pilot
308.750 frequency hopping
267.550 air combat
261.200 air combat
382.925 pilot to pilot

1665. Re: [ArizonaScanner] military frequencies

In regards to the list that "djr718@..." (I'm sorry, I cant recal the name) posted, I have checked it against my database, which has been suplemented by Waynes most recent posting, and have the following results:

?? = I dont have it
!! = I got it
(name) = corrected name

265.700 apache control..... ??
226.300 apache flight test....!!
293.100 pilot to pilot..... ??
288.200 air combat..... NORAD
238.400 air combat..... NORAD
379.200 air combat..... ??
281.000 raider base..... !!
314.750 pilot to pilot..... ??
286.200 pilot to pilot..... AR-603 O'Grady Sec / AR-658H Pri
352.300 air combat..... ??
347.850 active no id..... ??
371.100 air combat..... ??
391.800 air refueling..... AR-658L Pri
237.850 air combat..... ??
293.100 pilot to pilot..... ?? (repeated from above)
308.750 frequency hopping..... ??
267.550 air combat..... ??
261.200 air combat..... ??
382.925 pilot to pilot..... ??

I am curious as to where "djr718@..." is located, I am assuming the greater Phx area. Maybe someone else out there can possibly help ID some of the freqs and their use!

1670. Glendale police activity???

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-28 17:37:01 UTC
From: Tim Weaver
Topic: 1670 Message: 1670

Hey all,

Yesterday I went to the emissions station at 59 Avenue just n/o Paradise. In the field across 59th Ave, Glendale PD had their mobile command Winnebago and about a dozen cop cars. When I left emissions, a Channel 12 news truck was there, but I saw nothing on the 5pm news about it...didn't get to watch 6 & 10pm.

When I got home, I listened to my BC245 TrunkTracker and heard....nothing. Well, nothing apparently relating to the action. Lots of David and Frank units, but most traffic was on Channel one. Even then, traffic was much lighter than I would have expected for that time of day.

Anyone know what was going on??

Tim

1671. Steamboat fire Sedona

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-29 00:01:24 UTC
From: Temp Berdan
Topic: 1671 Message: 1671

Fire started just above uptown and has now jumped Oak Creek and it
trying to run up the NE canyon wall.

So far crews are arriving (number unk.) and three tankers have dropped
their initial loads as directed by air attack and lead plane.
The tanker will return to Winslow and Prescott bases and be on standby
as the fire is burning in a very tight area.

Meanwhile three choppers are on scene.

Initially the Sedona Fire District responded to fire which started and
West side of creek very near to the Uptown area.

HYW 89 A and Schnebley Hill Road are closed and local Coconino SO is
going up Schenbley to get hikers out, that have been spotted by choppers
and air boss.

Currently, air boss is going back to base (?) and lead plane will take
over until he returns, in the event that the tankers are put back into
action.

TV coverage: Ch 3 is on way up here.

Coconino Forest service: 171.550 dispatch/coordination
169.150 Air boss
Sedona Fire District: 154.400 Dispatch
154.010 field
154.130 fireground

More later if things heat up.
Right now, reception from VOC is poor due to mesas between me and
fireground.
Smoke is white (meaning few structures have been on fire, if any) and
has deminished substantially.

Date: 2001-06-29 20:55:38 UTC
From: Temp Berdan
Topic: 1671 Message: 1676

Rapid response by all units prevented the fire from spreading..... and
recent monsoon rains played a part as well.

By throwing a lot of resources (a la Calif.), at the beginning the fire
was held to only 25 acres.

Fortunately, the prevailing winds blew it to the other side of Oak Creek
and those commercial structures that were threatened, escaped damage.

Today, they are using grunts and a couple of choppers to snuff out any
remaining embers and flare-ups.

Cause: Two transients reported that they had seen an unknown guy set the
fire.
My guess is that it was the two transients and that "the other guy" does
not exist.
Unfortunately, a lot of transients come up to the high country from
metro PHX in the summer and cause a lot of problems.

Nothing like heading for the mountains to cool off !!!
BTW, today it is 100F here in SEZ.

I am assuming (here we go!) that those freqs refer to the D.P.S. MDT system, because the freq's for Tucson were reported (by Wayne) to be 859.150, 859.075 (TPD) and 858.150 (TFD)... let me know, because I'm a blonde!, and it's friday evening (t.g.i.f.!), and I am very easy to confuse under these circumstances!!

And as a bit of trivia (turn about is fair play!) there are 4 DPS units that use the SVPD MDT system (857.000) down here in my neck of the woods!

1680. Overnight questions

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-30 10:52:25 UTC
From: John H. Guetherman
Topic: 1680 Message: 1680

Over the past few hours, (I can't sleep), I've been hearing bits and pieces on the Fish and Wildlife Service 164.625 channel, regarding some incident down around Dateland, on I-8 between Gila Bend and Yuma, in Yuma County. I've heard some FWS (agents/rangers/wardens?) discussing some residents temporarily staying with neighbors "untill this incident can be dealt with", and that they (FWS) were going back to Dateland to wait for (what sounded like) the "MCS TOU". Later, another FWS was trying to confirm with his dispatcher a location on the highway between two mile markers, eastbound. He had no contact. Anybody know what is/was going on? And what is their proper title, and do they have any authority beyond federal fish and game laws? (See the Border Patrol question below.)

And I could hear 2 MCSO deputies using 159.090 simplex in District 2, regarding some incident in the Goodyear area. I could hear that they were responding Code 3, their sirens were in the background. There was also some later simplex activity on 159.090. I guess they didn't want to go to the car-to-car or tactical channel on the trunked system. Do any deputies still have the former UHF radios in their vehicles? (Maybe a portable?) I'm wondering if they're still using UHF simplex as well.

I know the county's Park Rangers still use their 159.390 channel. Do they also have capability on 159.090? What about 159.240? Is it still used by flood control? It seems to me the Park Rangers could use all three.

Lastly, does the Border Patrol have authority outside of federal immigration laws? I heard one time that they went through a local academy, and had all the powers of the sheriff to enforce all local and state laws in Arizona as well.

Okay, enough for now.

John H. Guetherman

Yes the MDT's can be monitored, but from what I understand it is highly illegal.
I dont think you are missing anything by not knowing what is being sent over the MDT's (except for maybe some time in the cross bar hotel)

I think Dan will have more specifics as to the legalities of all this.

Just got back from Europe.
The GP-68 is the big radio over there. If its not the GP-69 then its the MT1000.
Saw a few sabers, but not many

I was under the impression scanners were not the most legal thing to have in Europe but saw many people with them at the Paris Air Show.

1683. Re: Border Patrol

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-06-30 18:46:45 UTC
From: ravenfalls@aol.com
Topic: 1683 Message: 1683

Hi John,

Border Patrol basically has the ability to enforce immigration laws. If they become state post certified they can enforce state laws. But what BP mainly does is if they are on the highway and see a violation they warrant to pull over a US Citizen they will and "can" (Like excessive speed, drunk driving etc) but what they do is lawfully detain the driver and passengers until local law enforcement arrives to take over and BP is then secondary. DPS or other agencies sometimes uses BP for backup on a call or vehicle stop that involves US Citizens. The BP office in Blythe covers from the La Paz County line to Desert Center to about Kingman then halfway to Mexico so there is a big area there within a few states.

1685. Phoenix PD Chief Hurtt article

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-01 02:35:01 UTC
From: John H. Guetherman
Topic: 1685 Message: 1685

There was an article in the magazine "Mobile Radio Technology", back in March. In it, Chief Harold Hurtt of the Phoenix police department, discusses their plans for moving to 800 or 700 MHz. He also asks for our assistance in contacting our Congressmen and the FCC to ensure that their move won't be plagued with interference problems, such as Nextel is currently causing with some department's systems elsewhere.

Here's the link to the article:

From: Wayne Cummings
Topic: 1686 Message: 1686

To Donnie and the group:

The latest IFR flight supplement shows some drastic changes for the Libby AAF frequencies. You will notice the UHF Tower, Ground, and A/D freqs are different. Here is the cut and pasted text:

COMMUNICATIONS - UNICOM - 122.95 ATIS - 134.75 ASOS - 119.675 REMARKS: C520-459-7316. LIBBY APP/DEP - Opr 1400-2300Z Mon-Fri exc hol, OT ctc ALBUQUERQUE CENTER 134.45 327.15. (R) (E) 127.05 254.35 LIBBY TWR - Opr 1400-2300Z Mon-Fri exc hol. (E) 124.95 284.75 LIBBY GND - 121.7 268.7 PMSV METRO - 375.2 REMARKS: Remote briefing fr Davis-Monthan AFB DSN 228-3254, 239.8, full svc 1200-0300Z wkd; 1400-2100Z wkend; ltd svc OT and hol. LIBBY OPS - 122.95 FSS-PRESCOTT PRC-DL-NOTAM FHU

Also, I passed a frequency (263.125) out that I thought was from the Sierra Vista area but has now been positively identified as being A/D for Gila Bend Aux out of Luke. No chance on you hearing it Donnie! Take care...

Dan

From Harold Hurtt, chief of police, Phoenix

Mobile Radio Technology, Mar 1, 2001

If police officers were asked to rank the importance of the tools we provide them to do their jobs, a functional police radio would be at or near the top of most lists. Our police radios function as lifelines for our officers and the public we are sworn to protect.
The 800MHz spectrum that my department and several others have converted to has, unfortunately, been seriously compromised by commercial carrier interference, the largest being Nextel. The City of Phoenix has spent nearly $500,000 on additional infrastructure and other improvements without regaining an acceptable level of performance.
Due to the continuing 800MHz interference problems and our need to obtain additional bandwidth for future applications, we have been anxiously awaiting the availability of the 700MHz spectrum that has been allocated for public safety. We did not anticipate interference being a problem in the 700MHz spectrum because the Balanced Budget Act of 1997 and the accompanying conference report clearly state that “public safety service licensees will operate free of interference from any new commercial licensee.”
Recent engineering studies indicate that the emission protection rules currently established by the FCC are inadequate to protect public safety users from commercial carrier interference. The FCC standards established will not be sufficient to protect public safety from third- and fourth-generation commercial digital technologies, including time-division duplex (TDD) applications. Current FCC plans call for auctioning the 700MHz spectrum to commercial services on March 6, 2001.
The National League of Cities' Local State Government Advisory Committee (LSGAC) has summarized the 700MHz issue as follows:
“With the greater and accelerating use of spectrum it is absolutely essential that the 700MHz portion of the spectrum that has been set aside specifically for public safety uses have its complete functionality protected from the beginning. Attempting to fix problems after they occur will impose needless costs on the public and private sectors for litigation and less-than satisfactory retrofits. Public safety needs deserve the highest possible priorities from the commission.”
The LSGAC has made the following recommendations:

The FCC should remove the TDD digital transmitters from the commercial (CMRS) band adjacent to public safety base station receivers.
The out-of-band-emission standard should be reduced from 246 dBm to a lower value of 280 dBm. Trapping noise before it is transmitted benefits all users by keeping the “noise

floor” lower in this spectrum.

Please join the City of Phoenix, the Phoenix Police Department and myself in supporting the LSGAC recommendations. Support should be expressed by calling your elected representatives in Washington and by writing the FCC. Since the FCC's rulemaking process for the 700MHz spectrum seems to have run its course, we believe it will take an expression of concern from Congress to get anything changed. We believe it will also be valuable to let the FCC know that we are dealing with an issue of extreme concern to public safety. Please expedite your calls and letters. We must modify the FCC's current position on the 700 spectrum prior to the auction on March 6, 2001.
In my many years in law enforcement, I cannot recall a single issue with greater impact on our ability to do our job. Please lend your support!
Write to:
The Honorable Michael Powell, ChairmanFederal Communications Commission445 12th Street, SWWashington, D.C. 20554

Editor's note: On Jan. 31, the FCC acted to postpone the auction that Chief Hurtt mentions until Sept. 12, 2001. Related information appears on page 20.

Topic: 1688 Message: 1689

I suggested to John a few days ago that he just paste the link to it rather
than pasting the whole article since theoretically magazine articles are
copyrighted and can't be redistributed by anyone but the magazine itself.
But since I found an "email this to your friends" kind of link on the MRT
website (and the link to the article itself no longer works) I just let MRT
email the article to the list. :)

I know Dan has already posted the article online, but the problem you were having is because the mail reader you used wrapped
the line with the link in it and you didn't get it all.

> > Here's the link to the article:
> >
> > http://www.telecomclick.com//magazinearticle.asp?magazinearticleid=728
> > 07&mode=print

If you cut and paste the characters on the second line to the end of the first, you will be able to get to the article at it's
origin.

freqs are different. Here is the cut and pasted text:

****
Morning to Wayne and the group... after seeing the above post, I
decided to listen to the morning "radio roll call"... every morning, the
tower does a radio check of all of their transmitters just prior to
opening up "the tower".... here is the results of the roll call:

121.7 (ground)
248.2 (ground)
124.95 (tower/catf)
229.6 (tower)
127.05 (radar a/d)
234.4 (radar a/d)
237.5 (discrete radar)
299.1 (discrete radar)
374.1 (discrete radar)
124.55 (discrete radar)
120.65 (discrete radar)

I didnt hear anything on the "new" uhf freqs mentioned in Waynes
post... so... I aint too sure what's supposed to be correct at this
time.... I will continue to monitor and let everyone know if/when changes
occur!

73's Donnie

1695. Maricopa County Parks

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-04 03:56:01 UTC
From: John H. Guetherman
Topic: 1695 Message: 1695

Since I don't have a trunk tracker anymore, I can't listen to the trunked system. However, I do listen to 159.390 on a regular basis. It seems to be limited to use up at Lake Pleasant, which is fine by me, since I live in Peoria. (Fireworks got canceled, by the way, shells got soaked by the rainstorm.)

They refer to this as the "Parks" channel. Does anyone have a complete listing of their frequencies/channel designators/talk groups and unit id's? I heard reference to "Lakes 2", when one ranger couldn't copy another on "Parks". I have TG's:

496-East

560-North

624-Car to Car
656-West
688-Main

What parks are covered by East/North/West? Is there a South? Are there any other TG's? 464 or lower, 528, 592, or 720 and up?

Do they have a website by chance?

John H. Guetherman

Peoria, AZ.

1696. RE: [ArizonaScanner] Maricopa County Parks

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-05 17:14:38 UTC
From: Danz, Dan
Topic: 1695 Message: 1696

The analog talk groups 496, 528, and 560 that you mentioned are not significantly used by Maricopa County Park Police (not Park Rangers) anymore. Although we monitor them on our Info channel console, where we used to dispatch Park Rangers on nights and weekends, now we seldom hear anything on them.

The Park Police are dispatched by the MCSO dispatcher working Lake Patrol -- main channel is talkgroup Lakes-1 (digital, 43440), along with all the other Lake Patrol units county-wide. Most of the time, Lake Patrol is handled by the Eastside dispatcher, and you might find the East and Lakes-1 talkgroups multi-selected, which changes the talkgroup IDs in the low-order 4 bits of the number.

If there's car-to-car traffic between Lake Patrol units and Park Police officers, it will be on Lakes-2 (43472,digital). But Park units also have an analog talkgroup (don't know the TG id), called Parks car-to-car that deputies don't have on their radios nor do we have it on our consoles, and the Parks guys use it to talk car-to-car.

There is also a parks repeater on VHF (159.390) that is used in simplex mode for quick car-to-car traffic (without going through a dispatcher and getting the other unit to switch talk groups). If the reception is not good in simplex mode, they'll switch to using the repeater. However, this frequency does not appear on MCSO consoles, so they can't use it as an alternative frequency to talk to a dispatcher.

This repeater actually has better coverage in some areas on the northwest side, especially notorious dead spots for the 800-MHz system, like the back side of Lake Pleasant on the Table Mesa road side. Back there, you might even hear units get on the Peoria PD repeater because it's the only one with a decent signal. There's a new 800-MHz tower on a mountainside north of Castle Hot Springs and west of Bumblebee that SHOULD improve comm in the Lake Pleasant, Anthem, and behind Black Mountain in Carefree/Cavcreek.

Some of the units also use MCSO Search 8 (159.090) in direct mode for car to car, or in duplex mode to reach an MCSO dispatcher when reception is bad, or when handling an LZ for a helicopter.

Here's some Park Police callsigns you might come across: the prefix P used to be pronounced "Parks" on MCSO channels when we only did dispatch on nights and weekends, but now that they are dispatched full time by MCSO, the prefix is pronounced "Paul". The conflict between this and posse callsigns (also Paul) is usually obvious, since we don't have Posse callsigns less than 1000.

P600 - Park Police Chief
P605 - Park Police Lieutenant

P606 - Park Police Lieutenant
P610 - Park Police Sgt - West
p611 Estrella Park
p612 White Tanks Park
p613 White Tanks Park
P620 - Park Police Sgt - North
p621-p626 - Lake Pleasant
P630 - Park Police Sgt - (not currently in use)
p631 Usery Park
p632-p623 McDowell Mtn Park
p646 - San Tan Park Manager

The park police also (recently started to) use OPnnn (pronounced Ocean Paul) followed by their serial number when they are working off-duty jobs.

Any "Tom-5xx" callsigns are MCSO Lake Patrol deputies.
500-series: Command staff and Detectives
510-series: Apache/Canyon Lakes
520-series: Salt River and Saguaro Lake
530-series: Bartlett Lake / Needle Rock
540-series: Lake Pleasant

I've recently done some ride-alongs with a Lake Patrol deputy and taught MCSO radio procedures to some of the Park Police officers. With this closeup view came an increased level of respect for the Park Police officers -- they're full-fledged AZPOST-certified peace officers, with all the same powers and training of other law enforcement officers in the state. They can, and do, get into all of the things that any LEO gets into.

Since you can't scan the digital talk groups, sometimes the Park Police channels might be your only clue that something's going on.

If you're interested in Lake Pleasant traffic, you might also monitor Phoenix Fire-1 and Peoria Fire channels for traffic for Station 195, especially Brush-195, who hangs around Lake Pleasant when things are busy. The backup Rescue comes from Daisy Mountain. The marina on the east side of the lake is in the city of Peoria, and traffic there is handled by Peoria PD, but most everything else on land and anything on the water is MCSO Lake Patrol and the Park Police. Both have boats that can quickly get on the water. Deputies and Parks officers use their regualr call sign, but you'll hear them say that they're aboard "LPnn" (Lake Patrol boat) or "PBnn" (Parks Boat). You might also hear the Dive Posse units (callsign Diver-nn) and some Executive Posse units and Jail Wagons(callsign Executive) on Search 8. (No, that's NOT the same as MCSO command staff, whose callsigns are "Car-nn").

Happy listening....

L. W. "Dan" Danz Radio Dispatcher/9-1-1 Operator
Maricopa County Sheriff's Office (MCSO)

1697. Need some help...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-05 22:49:51 UTC
From: John LaBua
Topic: 1697 Message: 1697

Hi all,

Try as I might to figure it out on my own, I need some help to get what I want.

I've got the Phoenix FD freqs programmed in. Now, suppose a squad is dispatched to the scene of a traffic accident. The
injuries are bad enough to require AirEvac to the hospital. What frequencies need to be in there to listen in to:

1.) The helicopter being dispatched
2.) landing at the LZ
3.) and the trip to the hospital?

I know that a couple of these would depend on several factors (I.E. where the accident was, what hospital they were going to,
agencies involved, etc...) but with 500 channels available, there *should* be room, right? ;-)

I live in Glendale so am primarily concerned with the west side, but with an outdoor antenna, anywhere in the valley would be
ok.

Thanks!

John

Depends on where the helicopter is responding to:

Departments dispatched by phx fire typically use channel 2 as the LZ
Channel.
Everyone else typically uses Mutual Aid 154.280

AirEvac is dispatched on 155.325
Lifenet is on 463.200
Native Air is on a 900 mhz ltr trunked system.
DPS Ranger is typically dispatched via telephone but communicates with
Emscomm Med Channel 5 for most of its activities.

Hope this helps

Mike

One last thought: You most likely wont hear much radio traffic enroute to
the hospitals. Typically the flight crews all work under standing orders
and dont have to patch very often. Usually the helicopter dispatch will
notify the trauma center via phone that they are enroute their way.

You can however monitor the Emscomm Channels 1-10 and hope to hear something
from time to time.

John,

Mikes comments below are all very good pieces of info with one exception: Phoenix FD LZ's (Landing Zones) are on Fire Ch3 (154.070) not Ch2. Fire Ch2 (154.250 is used for Violent Incidents in the City of Phoenix, generally where fire units must hold off until cleared into the scene by Phx PD. On very rare occassions where Ch3 is already in use for something else in the area, a helicopter LZ might be on Fire Ch2, but this is the exception. 95% of the time, on Fire 3.

Other than that, Mike summed everything up real well! Phx Fire Ch3 (154.070) for agencies dispatched by Phoenix FD, and Mutual Aid 154.280 for those agencies NOT dispatched by Phoenix FD (Mesa, Gilbert, Rural/Metro, etc.)

Dan

1701. A LITTLE HELP PLEASE.....

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-06 03:52:49 UTC
From: Don Armstrong
Topic: 1701 Message: 1701

OK folks, put on your thinking caps! I have managed to get a hold
of a programing list from a local federal park ranger (the names are
being withheld to protect the guilty!!) and there are a few freqs that I
find very odd. Perhaps this is some really old stuff, and some of it no
longer apply's, or perhaps this is some "secrect squirrel" stuff.... who
knows!
Here goes:

NAME: RX/TX REMARKS:

SAGU 166.350/167.150 several different tx pl's
CNF LE 168.025 simplex
BLMA 168.300 simplex
FEDTAC 168.500 simplex
DOI LE 172.600 simplex
BLM 168.225/168.225 110.9/103.5
168.225/168.225 103.5/110.9
168.225/172.750 167.9/131.8
168.225/172.750 131.8/167.9

SAGU, I have no clue as to what that is, CNF LE (Coronado Law
Enforcement) 168.025 is a new one (?) to me, BLMA (??), FEDTAC- new one
to me, DOI LE (Dept of Interior Law Enforcement) again.. it's a new one
to me!!!
As to the 4 BLM freqs (actually only 2!) thats a bit spooky...
the 2 simplex pair has reversed and split pl's, as does the 2 repeated
channels... now split pl's are not uncommon, but thats a bit extreme! As
some (most?) of you know, the Dept of Interior uses a system of low split
uhf links throughout the southeastern portion of this state, I know for a
fact that they have a link on Heliograph Peak (10,100') that is
417.825/408.625 (tx/rx) and it has 2 vhf radios linked (hardwired) to
it.... can you guess what the 2 freqs might be.....168.225 and 172.750!!
Can anyone explain or verify whats going on here????

All right folks... it's time for me to hit the sack.... enjoy
this little request!

1702. RE: [ArizonaScanner] A LITTLE HELP PLEASE.....

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-06 04:32:38 UTC
From: Dan Rollman
Topic: 1701 Message: 1702

Hey Donnie,

I do know that the 166.350/167.150 pair is the repeaters for Saguaro National Monument (which is to the East and West of Tucson in 2 separate chunks). They do have various PL's. 127.3 is the Mt. Lemon Repeater (used mostly for Saguaro East), PL 156.7 is on Tucson Mtn. (used for Saguaro West), etc. The last time I was in the "FM Engineering" building atop Tucson Mtn. (that's what they call it) I did see that the Saguaro Nat'l Monument repeater is still in there, and was labeled just as I expected, with the TX/RX and PL pair noted.

SWFD does have 168.025 as Forest Service law enforcement, and I know the Coronado Nat'l Forest radios have this listed as CNF LE as well (I've seen a similar print-out from one of their radios). 168.025 is used at MANY national forests as a law enforcement frequency.

The BLM has a Repeater on Mount Lemon on 168.300 (169.225 input with a 167.9 PL) . For some reason this radio that the programming list you found originated from must have the simplex side of that repeater pair in it.

As for the four other BLM frequencies. It appears the two repeater pairs (same TX/RX, different PLs) would be two separate repeater sites on the same frequencies. Opposite PLs hit the other repeater. As for the two simplex frequencies. They could be used as simplex operations (like tactical) without having to listen to the repeater traffic. It could very well be that this radio setup was a radio programmers way of giving the guys a couple extra simplex channels without having to work to get a couple additional separate frequencies. Just my thoughts...

Anyone else have any ideas?

Dan

1703. Need advice on buying an outdoor antenna

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-06 05:38:22 UTC
From: s a
Topic: 1703 Message: 1703

Hello Everyone,

Like the subject says I would like some advice on buying an outdoor antenna so I can recieve better signals. I have a pro-91 handheld 800mhz Trunking scanner. Is there a PLace in mesa that sells antennas for scanners. And what do I need to look for in antennas Ex..(Length)(Size)(Cord Length) any help would be greatly appreciated.
Thanks,
Steve

Hello,

Dont know what to make of the 168.225 as an input? It is an output and was given to me a few years ago by BLM. I hear LE traffic on it from Blythe not sure which tower to White Tanks & Mt Lemmon. Many fed agencies use 1 pl tone or no pl tone for receive with 9 different encode (transmit) pl's to access different sites on a system with the same input frequency. The general radio plan is ch1 simplex of 2, channel 3 simplex of 4 and so on with 5 and up being simplex, repeaters of the agency or outside agencies.

Joe

Thanks, Dan. It figures that they would have gone to the digital Lakes channels.....*sigh* Analog TG 624 is what I have for Car-to-Car. Never heard anything on 528 or 592. Have heard 496-East, 560-North, 624-Car to Car, not sure about 656-West, have heard 688-Main. This was all prior to about October of last year when I lost my BC-235. (Also possible it was stolen.) So I haven't listened since except for one week when I borrowed my sisters' BC-235.

I do listen to 159.090 and 159.390. (Lots of repeatered stuff on 159.390.) Also, since I live in Peoria, I listen to their PD and the fire channels. Am primarily interested in Lake Pleasant and White Tanks, being the closest to me.

I did hear one Executive posse callsign, Executive 51, I believe, on the 3rd, when the fireworks show got canceled. Don't recall which VHF channel it was on. Do you know how the VHF radios are channeled? How are/were the analog groups channeled? Is/was 688-Main on channel 1 for example? I tend to like to program my scanners as close as possible to the way the agency I monitor channels their radios.

I did know that the Park Police were fully certified as peace officers. Didn't know they were Park Police, not Park Rangers. Thanks for the correction. Do they have a website?

Thanks for your help.

Park police web page:

http://www.maricopa.gov/rec_svc/park_police.asp
<http://www.maricopa.gov/rec_svc/park_police.asp>

I don't know how their radios are programmed.

I've never heard 624 or 688 but they're good bets for Parks channels ... one of them is probably C/C and the other might be used by park hosts or the folks at the contact stations. I don't know.

The posse guy you heard probably has his own VHF radio, and was more than likely using MCSO Search 8. I doubt that any of them have Park Police VHF channels programmed in.

BTW -- you guys monitoring helicopters should know that MCSO, doing LZ's for helos, uses Search 8 (159.090) because most of the helicopters don't (yet) have 800 MHz capability.

And the ones that do (like MCSO Fox 1) can only dialup one TRS at a time -- i.e., they have to pick the control channel and then can only use that TRS until they pick another control channel.

Fox 1-4 use a home channel of MCSO East (digital 43248) when they're not on a mission; they're dispatched mostly by phone, and will come up on the talkgroup that needs them, then revert to East for the trip home to the hangar at Deer Valley. If they launch for another agency, they'll usually keep their 800 radio monitoring East and use their other omni-frequency sets for UHF and VHF contact with the other agency, unless they have to use the 800 MHz set for the other agency (e.g., Tempe or Scottsdale) ....

I have a extensive listings of Federal Frequencies .. you might check
out these two first.

http://www.freqofnature.com/51random.txt
This is a listing in order of Frequency but not all have been
confirmed by me personally.

http://www.freqofnature.com/gov_doi_blm.html
BLM Confirmed

http://www.freqofnature.com
Many many others listed here by agency then department.

Morning Charlie, and the group.... I too have a listing (in a long forgotten database), showing 172.600 as "NIFC AIRCRAFT SAFETY "COMMON" ... I think I am getting too many databases! Anyway... 168.500, Montezuma Castle National Monument, that makes sense! the list came from a federal parks person.... Thanks for id'ing those last 2 freqs!

Hi all,

I'm going to Great Britain and Scotland tomorrow afternoon and was planning to take along my handheld scanner in order to listen
to Civilian Air frequencies while waiting in airports.

What I was wondering, does anyone know if I will be hassled at Immigrations/Customs when I bring the scanner into Great Britain?

I don't want it to be confiscated when I get there.

You may reply direct to my email if you wish.

Thanks!

Hey Dan, I have heard 160.110 used by the MCDoT in the past. It was a repeater output, I believe. Didn't do much monitoring of it. Just listened enough to confirm that it was being used, since it is not/was not a regular highway maintenance channel.

And thanks again for the Park Police info.

From: BD18PACKER@aol.com
Topic: 1716 Message: 1716

The answer is Yes, you will get hassled. For the most part, unless you have permittted use (from the government), scanning is unlawful in England. The airwaves are not free, there, and the government charges it's own citizens for owning a TV or radio. There are web sites you can look up specific laws regarding scanner usage in GB, but, as far as I know, foreign visitors with scanners, or other unauthorized receivers are prohibited. World band radios, Shortwave and the like are okay. British customs can be a bear; remember, the live with terrorist acts on their soil everyday. Makes them a bit skittish, 'ey?

From: Charles Simmont
Topic: 1718 Message: 1718

I am listening to a rather interesting call in the Northwest valley (185th Ave & Happy Valley Rd) where they are looking for a sniper who has shot at least 1 victim.

Anyway, to the point.... Once again MCSO and another agency on 800Mhz (Surprise PD) are not able to communicate directly! MCSO is using their old VHF freq Search 8 159.090 and Surprise is using talkgroup 52336 on their TRS. Why is USA-1 not being used instead of messages being relayed from the officers through the dispatchers? Why do these agencies keep spending millions of our dollars on systems that are obviously ineffective?

That's what happens when you have politicians making decisions about technology. Now the Phoenix Police Chief wants to scrap their system and go to a 700MHz system because of the amount of interference they are getting in the 800MHz band from business radios.

"It should be interesting to see this new limit work, since thermal noise in a 25-kHz bandwidth is about -130 dBm. I guess now the laws of physics are subject to political review (grin)"

From Harold Hurtt,
chief of police,

Phoenix Mobile Radio Technology, Mar 1, 2001

If police officers were asked to rank the importance of the tools we provide them to do their jobs, a functional police radio would be at or near the top of most lists. Our police radios function as lifelines for our officers and the public we are sworn to protect.

The 800MHz spectrum that my department and several others have converted to has, unfortunately, been seriously compromised by commercial carrier interference, the largest being Nextel. The City of Phoenix has spent nearly $500,000 on additional infrastructure and other improvements without regaining an acceptable level of performance.

Due to the continuing 800MHz interference problems and our need to obtain additional bandwidth for future applications, we have been anxiously awaiting the availability of the 700MHz spectrum that has been allocated for public safety. We did not anticipate interference being a problem in the 700MHz spectrum because the Balanced Budget Act of 1997 and the accompanying conference report clearly state that "public safety service licensees will operate free of interference from any new commercial licensee."

Recent engineering studies indicate that the emission protection rules currently established by the FCC are inadequate to protect public safety users from commercial carrier interference. The FCC standards established will not be sufficient to protect public safety from third- and fourth-generation commercial digital technologies, including time-division duplex (TDD) applications. Current FCC plans call for auctioning the 700MHz spectrum to commercial services on March 6, 2001.

The National League of Cities' Local State Government Advisory Committee (LSGAC) has summarized the 700MHz issue as follows:

"With the greater and accelerating use of spectrum it is absolutely essential that the 700MHz portion of the spectrum that has been set aside specifically for public safety uses have its complete functionality protected from the beginning. Attempting to fix problems after they occur will impose needless costs on the public and private sectors for litigation and less-than satisfactory retrofits. Public safety needs deserve the highest possible priorities from the commission."

The LSGAC has made the following recommendations:

The FCC should remove the TDD digital transmitters from the commercial (CMRS) band adjacent to public safety base station receivers. The out-of-band-emission standard should be reduced from 246 dBm to a lower value of 280 dBm. Trapping noise before it is transmitted benefits all users by keeping the "noise floor" lower in this spectrum. Please join the City of Phoenix, the Phoenix Police Department and myself in supporting the LSGAC recommendations. Support should be expressed by calling your elected representatives in Washington and by writing the FCC. Since the FCC's rulemaking process for the 700MHz spectrum seems to have run its course, we believe it will take an expression of concern from Congress to get anything changed. We believe it will also be valuable to let the FCC know that we are dealing with an issue of extreme concern to public safety. Please expedite your calls and letters. We must modify the FCC's current position on the 700 spectrum prior to the auction on March 6, 2001.

In my many years in law enforcement, I cannot recall a single issue with greater impact on our ability to do our job. Please lend your support!

Write to: The Honorable Michael Powell, ChairmanFederal Communications Commission445 12th Street, SWWashington, D.C. 20554

Editor's note: On Jan. 31, the FCC acted to postpone the auction that Chief Hurtt mentions until Sept. 12, 2001.

LOL, yep that's common sense for you. Spend a ton of money on a radio system that won't be able to communicate with any other system in the state. So much for interagency channels, guess they will become a thing of the past. I seem to remember Phx having about 60 800Mhz freq's and testing on them a while back. I would assume that it costs something to license those frequencies and setup transmitters to test the reception. Oh well its only taxpayer money and the safety of a few police officers and firefighters. :-(

I had asked about mutual-aid/interagency communications some time ago. The response was that the agencies don't want their officers going to a radio system that the agency has no control over. That's why you rarely hear 155.475/460.375 used in the Valley. MCSO controls it. (That's not a dig against MCSO.) With the exception of air support and maybe a K-9 officer, you will rarely ever hear an officer from one agency come up on any other agency's radio channels. It's territorial jealousy.

My guess is, if you were to ask any of the high ranking people in an agency, they'd probably tell you that there isn't any problem with the officers relaying comms through their respective dispatchers. Even if direct comms would be more efficient.

DPS was also working it on 460.300. Only Firebird 5 and Ranger 38 (up from Tucson) were communicating on both 159.090 and 460.300. As well as between each other on 123.025.

It did sound like 159.090 was possibly patched into a digital talkgroup. Most of the deputies on the ground had a "watery-sounding" effect on their audio. Similar to what I've read about regarding LAPD's patching of their analog and digital channels together on the socalscan group. And the audio from the dispatcher and the helo's varied in quality. Sometimes solid copy, sometimes with interference.

Well I don't think they were using or patching to the VHF frequency for the helo's. I know that more than once I have heard Firebird talking to Glendale PD on USA-1 and I am sure Ranger has a 800Mhz radio up in their bird also. Maybe one of the MCSO guys on the list will be able to shed some light on whatever the problem was with their state of the art radio system.

It is probably the same problem that forces deputies to stand on one foot and hold a coat hanger up in the air to talk on their portables. In my humble opinion, MCSO needs to back away from the digital modulation format, because if I remember correctly, analog worked a lot better (safer) for the beat deputies out here in heavens half acre.

again, just my opinion (based upon actual observations)

Kevin,
Speaking of MCSO, have they taken up residency at the Buckeye
Valley Fire Dist's main station outside of Buckeye? I know they moved out
of the bldg next to the Buckeye PD and every time I drive by the Fire
Station I always see a couple of their cars there.

That would be a mighty big list. Try the Southwest Frequency Directory at
www.scannerstuff.com

1727. Traffic Control

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-11 22:39:07 UTC
From: foresigt@hotmail.com
Topic: 1727 Message: 1727

I certainly hope this is enough on topic!

A while back there was a conversation about a car with a funeral with "Traffic Control" on the windshield and there was some discussion whethere it was law enforecement.

The other day, I saw a mid '90's white Ford Tarus fitting that description. The light bar was covered with an "Out of Service: cover but the "Traffic Control" was on the windshield. The car only had passenger car plates on it.

Yesterday, I went by a funeral home and there was a truck with "Traffic Control" on the doors blocking the road. I must admit it was commical to watch the keystone cops.

Their form of communications seems to be hand signals. There were no antennas on either vehile nor did the one guy seem to have any radio non his person when he got out.

The one pick up had a red rotating light in the front window and would pull into an intersection, leave his siren on, jump out and try a feeble attempt to direct traffic. The lead truck had some cheap 2 rotator magnetic light on the roof and the procession consistently got caught in the traffic stopped for the other vehicle.

I'd sure be upset if I was paying money for that funeral escort.

Can anyone tell me what frequency you can monitor hand signals on?

Dennis

~~~~~~

Yeah, the helo's and MCSO dispatch were operating directly on Search-8. I heard Firebird 5 give Ranger 38 both the input and output along with the PL tone. The deputies on the ground, however, may have been patched from either one of the SWAT or Westside channels to Search-8. Their audio sounded "watery". I think I get some interference from a pager on 158.700 which is located a mile north of me at 91st Ave. and Cactus Rd. which may have been the cause of the audio from Search-8 going from solid copy to scratchy at random intervals.

Back when the Peoria PD showcased their new command van, I asked the lieutenant there why they hadn't installed a Glendale trunked radio, or any other radios in it. He said they didn't need to, they just relay everything through their dispatchers.

I don't know why they just can't add one of the interagency channels to a console at every police agency. That way, if one of their officers had a need to talk to another agency's officer, they could monitor them, and at least have some semblance of "control" over them still, if that "control" is what is stopping them from allowing their officers from using the interagency channels. The SO could be the agency that "owns" the channels, and patches all 3 together.

Of course, I'm just a simple taxpayer. Heaven forbid that a chief actually consider a suggestion from one of "us".....

John

1730. LIBBY ARMY AIRFIELD...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-12 14:41:49 UTC
From: Don Armstrong
Topic: 1730 Message: 1730

Morning group... as some (most) of you may remember, Wayne had
posted a note a week or so ago, regarding changes to freqs here at Libby
Army Airfield / Sierra Vista Municipal.. those changes were to take
affect as of this morning (7-12-01)... Well, I listened to the daily
morning radio "roll call" and here is the results:

229.6 (old tower)
268.7 (new ground)**
284.75 (new tower)**
124.95 (tower)
121.7 (ground)
124.55 (discrete radar)
120.65 (discrete radar)
254.35 (new app/dep radar)**
237.5 (discrete radar)
299.1 (discrete radar)
374.1 (discrete radar)
127.05 (radar app/dep)
375.2 (pmsv metro)???? I have no clue as to what this is!

Notably absent was the "old" freqs for military Ground (248.2)
and the "old" military App/Dep Radar (234.4). I did notice yesterday
morning, that during the "radio roll call", all freqs (new and old) were
tested.The ATIS (134.75/265.7) remains unchanged, as well as the Auto.
Wx. (119.675) and Unicom (122.95).
As of this time (0745) there has been no military traffic, as the
morning progresses I figure we will get some military traffic, and I will
be able to note the use of the "new" freqs!

I just heard (0815) the tower do a radio check on 127.050 and
they were testing 257.2... 127.050 is the App/Dep Radar, and this 257.2
is a new freq to me!... I am assuming (at this time) that it is something
of a discrete radar freq.

1732. 462.2875 ???

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-12 18:24:48 UTC
From: ahoecker@citlink.net
Topic: 1732 Message: 1732

I have tripped across voice data being transmitted on 462.2875 in the Kingman, AZ area (about 85% quieting) no ID last 30 min, but repeated broadcasts as follows:

Wet Barometer:
Air Temp:
Road Temp:
Wind Speed:
Wind Dir:
Humid:

Each repeated announcement seems to have different temps, wind speed, etc. as though they were from different sites. Anyone have any ideas as to what I am listening to???
Tanks,
August

The MCSO Deputies all have the Surprise PD channel in their radios. The problem may be department policy not the radio system. Its easy to second guess how the officers choose to use the different radio channels available to them. We all are wishing for a day when everyone will be able to talk to everyone else. Because of Politics, this will probably never happen, but it is great to dream about it.

Hello,

Yes, it does work and is possible. I do that to save space in my scanner. I have Thompson Peak, White Tanks, 2 downtown sites, My Ord, Yarnell & Smith Peak in 1 back for the county system. That way I can use the same talkgroups at 1 time and just unlock the system you want to listen to or are closest to. Tempe & Scottsdale each have their own banks but since the county system uses the same talkgroups I put them all in 1 bank. I have found it doesnt work for Edacs systems but is great for Motorola Systems.

~~~~~~

Hmm, the FCC webpage gives me two callsigns for the Boeing Company and one for Volkswagen of America in Maricopa County, and one callsign for BHP Copper in Pinal County. Nothing up in Mohave County. In California, the closest licensee would be the Eastern Municipal Water District in Perris, Riverside County. There are two users in Las Vegas, Clark County. One is WPPA727, a YG licensee, and WPRM 344, an IG licensee. Wonder if you're hearing an image? Although, for a typical IF of 10.7 MHz, 462.2875 + 21.4 = 483.6875. 462.2875 - 21.4 = 440.8875. Not likely.

Wish I could be of more help. Sounds interesting, though.

1742. "Phoenix Metro Traffic"...Police?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-15 20:50:30 UTC
From: Brian G. Bowling
Topic: 1742 Message: 1742

Hello All,
I figured that the members of this list would be privy to the answer to my question as it deals with a subject related to the scanning hobby. Well, here it is: Does anyone know anything about a law enforcement agency in the East Valley that labels their vehicles with the moniker "PHOENIX Metro Traffic"?

Several times this summer I have seen an early model Ford Taurus on SR 101 or in the Chandler area displaying the aformentioned title. They were white in color with blue and yellow striping in a very similar style to the new Phoenix PD pattern. Nowhere on them did I see the word "police, sheriff, marshal, DPS, ect." yet they had red and blue overhead lightbars and were driven by uniformed personnel.

A UHF or cellular antenna was trunk mounted but I cannot find anything about them in the SWFD nor on the Internet. Any ideas about who they are, what freq.s they use or if they are in fact a municipal agency? Maybe they are the "funeral cops" that was discussed earlier,
as I guess the state permits them the use of law enforecement emergency lights? Or they may be some adjunct of the Phoenix PD used for traffic control? I simply do not know and these car(s) struck me as odd! Thank you for your time.

Perhaps the next time you see them you should look at the plates.
I think I saw one of the cars last week and it has pasenger car
plates on it.

Usually if it is a "marked" law enforecement vehicle, it should have
a "G" plate on it.

1747. Re:Phoenix Metro Traffic (Digest Number 402)

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-16 22:15:24 UTC
From: BD18PACKER@aol.com
Topic: 1747 Message: 1747

As discussed here before, Phoenix Metro Traffic ARE the funeral cops...they're granted the use of red and blue lights through an exemption to state uniform Traffic laws, regarding the use of red lights displayed to the front of vehicles, I don't recallthe statute, but I believe if they are designated as an emergency vehicle, by the granting authority (Sheriff, DOT, Etc.?) they are permitted use of such lights. They are not designated peace officers, and have no traffic authority on public highways. How do they stop traffic for funerals, you ask? I believe this is also covered in the State Uniform Traffic laws, which state (I'm paraphrasing here) " funeral processions may proceed through signalized intersections, and uniform traffic control devices (stop signs, yield signs, etc.), to continue the procession without regard for these devices...." The only exception I know of, is they must yield to official emergency vehicles, (LE, Fire/EMS, Ambulances, etc.) displaying lights and sirens. I have noticed that these "funeral cops" do not carry and LE equipment (Sam brownes, guns, etc.) save the occasional whistle or traffic wand. And, I might also state that traffic must yield to these processions, even to the extent of allowing them to proceed against traffic signals. It may also be unlawful for you or I, to join a funeral procession, to avoid obeying traffic control devices along the funeral procession route. Perhaps, our LE community on line can refresh our memories about any ARS statutes or sections of the Uniform Traffic Laws which cover these points more thoroughly
73's to all,
BD

Pretty sure you will get a big hastle.
They dont like radio and scanner type items over there very well.
you can try it, but if they dont like it they will confiscate it and you
will no longer be the proud owner of that piece of equipment.

Hi all,

I'm going to Great Britain and Scotland tomorrow afternoon and was planning
to take along my handheld scanner in order to listen
to Civilian Air frequencies while waiting in airports.

What I was wondering, does anyone know if I will be hassled at
Immigrations/Customs when I bring the scanner into Great Britain?

I don't want it to be confiscated when I get there.

You may reply direct to my email if you wish.

Thanks!

John

1749. Tucson's New Radio System

Yahoo group: ArizonaScanner (1999 — 2002)

City's $78M upgrade paves way to interagency talk

Public-safety communication

By M. Scot Skinner
ARIZONA DAILY STAR

A federal program that studies how public-safety agencies communicate with each other rates Arizona and 27 other states as "developing," but Tucson is actually ahead of the curve, a city technology official and a national expert agreed.

That's because Tucson is planning a $78 million upgrade of its communication systems and facilities that should be fully operational within five years.

One goal is seamless radio communication between Tucson public-safety agencies and neighboring agencies. This becomes important in major situations or vehicle pursuits that go in and out of jurisdictions, authorities said.

While it's too early to say whether agencies such as the Pima County Sheriff's Department will sign on as partners in communication efforts, the upgrade is being approached with the inter-agency ability in mind, said Jim Perry, the city's administrator for technical planning and research.

Currently, public-safety agencies in the Tucson area cannot effectively communicate with each other because of the different radio systems and frequencies they each use. Personnel in the field needing to contact another agency must ask dispatchers to call the other agency and relay information.

A new "report card" by the Public Safety Wireless Network categorizes each of the 50 states as either Mature, Established, Developing or New. The 4-year-old public-safety program, which works with agencies at all levels of government to improve radio communication between agencies, is a joint project of the Departments of Justice and the Treasury.

Only Michigan and Delaware are rated as Mature, meaning they have achieved the ability for agencies to communicate with each other on a statewide basis. Using common standards, the system allows officers and paramedics to communicate via radio with other jurisdictions.

The widespread inability of agencies to efficiently communicate with each other was highlighted during the 1995 bombing of the federal

building in Oklahoma City, Perry said.

More than 100 runners were used to relay messages between agencies, a method described by Perry as "Civil War" technology. "That really opened people's eyes and was a catalyst to getting these studies moving,'' he said.

"This is really a nationwide problem,'' said Rick Murphy, the co-program manager of the Public Safety Wireless Network. "But Tucson is definitely ahead of the game in terms of planning and preparation.''

Even though they're limited in how they communicate with each other, Tucson-area public-safety agencies have the ability to turn on a signal repeater called "tri-band."

The tri-band allows for the limited connection of the different VHF, UHF and 800megahertz bands that are used by public-safety agencies.

Perry said the tri-band is a stopgap measure that has to be turned on at a communications center and then officers in the field must turn to that frequency.

Tucson's analog communication system has parts that are hitting the 20-year mark, Perry said. It's becoming increasingly difficult to buy parts for it, and when it breaks down, it must be repaired immediately by city employees.

The importance, after all, can scarcely be overstated, Perry said. "We're not talking about a taxicab communication system,'' he said. "This is a lifeline.''

Lt. Mike Sacco, in charge of technical support for the Sheriff's Department, said the county bought a communication system in 1999, replacing a 10-year-oldsystem that was not Y2K-compliant.

"The problem is that because of proprietary technology, you buy a system and it's not compatible with other systems,'' he said.

When the county bought the new system, officials intended to use it for many years, Sacco said. That could complicate efforts to join with Tucson's upgraded, digital system. "The stumbling blocks are the cost and timing,'' he said.

The state leaders in terms of communicating with each other are Phoenix and Mesa, which will begin operating on common frequencies by the end of 2002,Sacco said.

The Tucson upgrade will include a new communications facility and "whatever it takes to move information through the city, such as microwave and fiber-optics hardware, plus the transmitters and receivers,'' Perry said.

In addition to the Fire and Police departments, the system will integrate communication with other city departments, including solid-waste management, water and transportation.

Tim,
Hmmmm, do you have attic access?
If so, it should work there, unless you have a metal roof.

If you do have roof access, there is an antenna carried by HRO that is a broadband stealth antenna which fits right over roof vent pipes?.. meaning that the only thing you landlord would see might be the lead-in.
Other than that, how about your clothes closet?
BTW, do use RS QUAD shield RG6 lead in.

Hope this helps.

Temp
In SEZ
P.S. One word of caution,
If your apt. building is sheathed with aluminum siding, you are in the middle of a quasi faraday shield?? meaning that reception is most likely going to be really poor or non existent.
Best fix for this problem is to move.

Hi Donnie,

The 166.375 freqs are for BLM. The sites you have listed should be for California Southern BLM. Also the input is correct for 166.375. Also the tones match up for standard BLM tones, ie.. 131.8 Blk for Black Mountain north of Glamis Tone 4.

1757. New poll for ArizonaScanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-19 06:20:34 UTC
From: ArizonaScanner@yahoogroups.com
Topic: 1603 Message: 1757

Enter your vote today! A new poll has been created for the
ArizonaScanner group:

Please help Scannerstuff determine what
format you would like to see for future
Southwest Frequency Directory editions
(Summer 2002 release). Keeping the 8.5"
by 5.5" size may make the book easier
to carrier, while increase to full-size
8.5" by 11" pages would make maps
larger and more clear, and allow
entries like code lists to fit on a
single page. An 8.5" by 11" size would
also mean fewer total pages, so the
book would not be as thick. Either size
option would include all the same
information.

Another option is whether other areas
(like Las Vegas, Portland, and Salt
Lake City) should all be in a single
large book with Arizona, or make room
for more Arizona information by putting
the other states in their own booklets.
Please select one option each for both
the "size" and "Arizona" category
below. Thanks for your input!

o SIZE: Keep current 8.5" by 5.5" "half page" size for SWFD-7
o SIZE: Increase size to full 8.5" by 11", meaning fewer but larger pages in SWFD-7
o ARIZONA: Keep detailed Las Vegas, Portland, Salt Lake City sections in same book with
Arizona
o ARIZONA: Remove Vegas, Portland, SLC to their own separate booklets and make room for
additional Arizona info in more compact book

To vote, please visit the following web page:

http://groups.yahoo.com/group/ArizonaScanner/polls

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

1759. RE: [ArizonaScanner] New poll for ArizonaScanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-19 06:35:54 UTC
From: Dan Rollman
Topic: 1603 Message: 1759

Also FYI,

If we do decide to switch to the 8.5" by 11" full page size format, it is highly likely that we will release a small booklet style "Metro Guide" (60 or so pages at the current 8.5" by 5.5" size) at the same time as the big book, so that those (particularly in Phoenix) have a smaller quick-reference guide for the glove box or wherever else, in addition to the larger book with the full size maps and all. So take that into consideration when stating your size preference in the poll.

Thanks,
Dan

1763. Legally monitoring digital now.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-19 11:16:14 UTC
From: John H. Guetherman
Topic: 1763 Message: 1763

Hey all,

There's a multiple-thread discussion going on over on the SoCalScan list, regarding, among other things, legally purchasing digital-capable radios, and getting them programmed for an agency such as LAPD, or in our case, the MCSO, (recieve only, of course), and monitoring them.

Other than the cost of buying a digital radio, there doesn't appear to be any legal reason we can't do just this. We could monitor the MCSO if we really wanted to, according to several posters on the SoCalScan list. I'd like to know what the thoughts are of those here.

If you want to check out some of the posts, I had one at #12161. The two most relevant replies are at 12162, and 12199.

http://groups.yahoo.com/group/socalscan/message/12161

http://groups.yahoo.com/group/socalscan/message/12162

http://groups.yahoo.com/group/socalscan/message/12199

The poster at 12162 is quite, shall we say, vocal. *grin*

Like I said, I'm looking for opinions from those of you here.

Subject: [ArizonaScanner] Police Codes

I was curious what "ir" means ex.. "Can I get a new IR"
and also "RO" ex.. "I'll notify the RO"

Thanks,
STeve

Hey Tim... I have been in your position a time or two, and I have resorted to using a small dual band antenna (Comet, I believe) on a mag mount, and have found it to be very successful for me!... Matter of fact, it's what I have been using for over 4 years now!... It's not worth a hoot for low band (30-50 mhz), but 100-800 mhz it works pretty darned well for me!
Just another $.02 worth for you!

Topic: 1763 Message: 1766

Well I am sure there aren't any legal reasons you can't have a digital radio programmed to just receive a local agency. However once you finally take out a loan on your house to buy the radio and finally get them to program it for you, who knows what you will wind up with. The whole reason they went digital was to keep the public from hearing what they were doing. I would bet that you wouldn't get half of the talkgroups that you wanted to monitor, probably just a couple of "media" and other useless channels. MCSO currently has a Media channel on their trunk system which transmits in Analog, I don't think I have ever heard anything on it though. So yes you may be able to buy the radio, and get it programmed, but still may not be able to hear what is going on.

There is no rule against monitoring digital communications
UNLESS they are encrypted! Then it's a no-no! Sort of hard
to control this rule. Even harder to get the encryption
codes!!!

From: August Hoecker
Topic: 1752 Message: 1768

Tim, I have done the same thing with the radio shack mobile mag mount scanner antenna mounted atop my refrigerator and then on a metal shelving unit as a ground plane. It worked OK and I still use it on one of my cars. It must have a metal base under it. Again, as the previous writer said, low band reception (30 to 50 MHz) is poor unless they are close by.

You can also make your own multi band dipole antenna from about $1 worth of wire, a short length of coax and a connector. A few thumb tacks to hold the wires to the wall and your on the air!!

1770. RE: [ArizonaScanner] Legally monitoring digital now.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-20 01:05:16 UTC
From: Dan Rollman
Topic: 1763 Message: 1770

Kevin,

It would depend on the system. If the system is encrypted, it's not going to happen.

But a non-encrypted digital system like what MCSO "currently" uses, and Scottsdale PD will soon be on, (notice I say currently, because they "could" encrypt their talkgroups) you should need little more than what you need to program a TrunkTracker. It will likely require just one more step: to specify APCO-25 digital (as opposed to regular analog). If you've never tried, you can trunk track MCSO on their system, monitoring and following their talkgroups just like any other system. Only difference from it and any other valley trunked system is that the audio is digital, not analog. So while you can track the MCSO talkgroups without any trouble at all on a TrunkTracker scanner, all you audibly hear is the noise a digital transmission makes when it's being monitored on an analog-only scanner.

Future digital scanners will just need to translate the digital audio into intelligible voice. The "trunking" portion is no different that what current trunktrackers already do.

When you hear people referring to "keys" or other special codes beyond talkgroups, they are most likely referring to encryption information. Consumers scanners will never have the ability to decrypt DES or other encryption schemes, so it's important to make the distinction between simple digital systems, and encrypted systems.

1772. RE: [ArizonaScanner] Legally monitoring digital now.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-20 07:01:10 UTC
From: Dan Rollman
Topic: 1763 Message: 1772

True but we do understand the technology of a digital trunked system (particularly those APCO compatible) better than we understood trunking in general 8 years ago.
A digital trunked system is much more similar to an analog trunked system, than an analog trunked system is to a conventional repeater (current change vs.. the change we dealt with in the 235).

You are right, Charles, in that only time will tell. But the majority of the issues in programming a TrunkTracker today (i.e. fleet maps, etc.) has to do with the fact that there are so many variations of how the system can be set up. From my understanding of the Project 25 protocol, there's not nearly as much complexity with regard to variation from one system to the next. So most likely a digital TrunkTracker will retain relatively complex programming issues that relate to the trunked nature of the system (as we currently deal with), but the fact that the system uses a digital modulation scheme really shouldn't add too much to it. We'll see. Course maybe not with MCSO if they are set on keeping the public out using encryption (and degrading their already poor coverage) but we'll certainly get to test non-encrypted digital trunked monitoring on some agency some day. Maybe Mesa or some portions of the future Phoenix system? :)

Dan

1773. The truth about digital radio

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-20 07:30:39 UTC
From: tracy@freqofnature.com
Topic: 1773 Message: 1773

Digital radio AKA APCO-25 AKA P25 AKA Project-25 AKA many others.

Maybe this will help explain in plain english what all the hoopla is about in regards to digital radio.

First I'd like to make it clear that Digital radio and Trunked radio are two different beasts. Just because an agency is on a Trunked Radio System (TRS) doens't mean they are digital and just because an agency is on a digital system doesn't mean they are on a TRS.

There are several different standards for digital radio out there but most of the United States Federal Government's domestic agencies have pretty much (It's not set in stone.) decided on the APCO's Project-25 specifications. Many in the military have decided on other standards in wide use in Europe today but I could go on and on about the subject but I'll spare you my blabbering.

Check this URL to clear the air here about digital radio .. the URL is kind of outdated but most of it still applies today.

http://www.nifc.gov/hotsheet/digital.htm

1776. PCSO radios

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-21 07:25:48 UTC
From: Scott Burke
Topic: 1776 Message: 1776

I recently requested the assistance of PCSO at my home, they responded fairly rapidly and consequently resolved the problem. That is my problem. I live slightly southwest of Tucson and when the deputy tried to call his dispatch, no response even after moving to different parts of the house. Fortunately my 10 year old radio shack phone worked in order for him to complete his job. I asked and he said that their radios "suck" badly... so much for modern day advances.
I also have a question for any Tucson members. Does anyone know who or what the white windowless van is that occasionly parks on the on-ramp to westbound I-10 at broadway is ?? They have either photo or radar equipment which is directed sideview at tire level. I can never get a chance to see who it is. My dusty old escort radar detector remains silent in passing.... Any ideas???

1779. RE: [ArizonaScanner] PCSO radios

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-21 08:18:11 UTC
From: Dan Rollman
Topic: 1776 Message: 1779

I used to see that van at several onramps all along I-10 in the Tucson area when I lived down there. I was told several years ago by a DPS friend of mine that it is operated either by ADOT, or an ADOT contractor and is doing some kind of measurement / survey type work. It is not running radar or any kind of enforcement (my radar/laser detector has always remained silent as well) activity per this guy who had been told about the vehicle by a co-worker.

I've noticed that the van sometimes has the "cable" type devices stretched across the ramp and running into the van, which look similar to the black cords you used to see at gas stations (back when you could pay an extra buck or two for service), and you also sometimes see these cords attached to cubic-foot size unmanned "boxes" on the side of streets, presumably monitoring the number of vehicles that pass by.

I read the previous post from one person regarding it being a photo-emission enforcement van. I suppose that is plausible, but I can't imagine how it can get an accurate emission reading from a vehicle driving by, given that the emissions test stations have to stick a probe right in to the exhaust pipe and take measurements at various idle levels to pass or fail. Not that I know anything about emissions, so I shouldn't talk. Who knows.

As for PCSO's system, I've heard the same things from my friends at PCSO as well, Scott. They despise their "high tech" radio system. Those who have been there long enough to remember using VHF radios wish they could go back to those, but they'd settle for the EDACS radios they once had. I was at a call with a deputy at the Stockmen's Lounge (Flowing Wells and Roger Road) not long ago and he was unable to communicate on his radio from inside the bar. Had to move around to find a spot where he could hit the system. Given the fact that it is in the middle of town (no "middle of nowhere" excuse there!) and the number of bar brawls they get in that place, that's pretty scary. The only peace officers I've ever heard use MORE foul words in describing their new radio system than Pima SO deputies is Maricopa County SO deputies, and they REALLY hate their radios (of course they tread a political tight rope saying too much about what one deputy here in Phoenix described to me as "the only device I actually carry on my person that threatens my life daily". It's so ironic how the two agencies with the newest, most expensive radio systems in our state are the ones many of who's deputies carry their cell phones on their belt rather than in their car, so they can call 911 and yell "999" in a time of need. 'Course these are the only two agencies I know of in the state whose members wish they could go back to their old systems. At least with Pima SO, there is such thing as weak and scratchy signals that dispatchers can do their best to make sense of. Several people with MCSO tell me they now have a new phrase, "you went digital" to describe the unintelligible garbage the digital nature of their system causes, as opposed to what would be merely a "scratchy but readable"

signal in analog mode.

By the way, no offense intended toward Steve Gibbs, Larry Sayers, Gail Patterson, or any of the other system support guys from PCSO and MCSO by my relaying of deputies statements ... just adding to Scott's comments with some I too have heard from deputies of the two agencies. Undoubtedly the system techs do the best they possibly can to make a flawed technology applied over too large an area work as best they can make it work with the resources they're given, and Steve and the others should be applauded for that. But it's still a sad situation for the deputies involved.

The Vans are called SMOG DOGS....
they "sniff" your exhaust as you drive by and if you car is not compliant with current smog regulations, then you get a nice pink piece of paper in the mail.

While the concept of "SMOG DOGS" may be interesting to some?, with the amount of traffic on the interstate system and the wind that is created by such traffic thoroughly mixing the exhaust from dozens of vehicles together, combined with the inability to stick a camera in between cars to take photographs as they go by at 55-75 MPH, I find the "SMOG DOGS" concept extremely difficult to swallow. Perhaps we need to look further and with more clarity at this issue.

Testing car exhaust from afar

Auto-emissions scofflows may soon be unable to hide

Wednesday, 24 May 2000
BUSINESS D1
By Alan D. Fischer
ARIZONA DAILY STAR

A Tucson company's technology could help cut auto emissions and improve air quality.

MD LaserTech Ltd.'s remote-testing devices can identify passing vehicles that exceed allowable standards for several types of pollutants - without drivers knowing the test even took place, said company president Dennis L. Smith.

MD LaserTech has no domestic contracts but has sold its remote sensors in other markets, including China and South America. The company has test programs under way in several states, Smith said.

Information gathered by the spot-checks tells if an annual emission testing program is effective, he said. And owners of vehicles spewing excessive pollutants could be asked to bring their cars up to allowable emission levels, he said.

A remote-sensing program using similar technology that operated in Phoenix from 1995 until legislators cut funding last month was successful, said Peter Hyde, air quality analyst with the Arizona Department of Environmental Quality.

"That had a genuine benefit. We saw a 1 to 1.5 percent reduction on carbon monoxide," Hyde said. "Those are big percentage numbers. There are just a few control measures that are above a fraction of a percent."

Hyde said the Legislature's decision to halt program funding will have an impact on air quality. "It will be hard to make that up," he said of the reductions that resulted from remote testing.

He said that when a vehicle failed two remote tests, a letter went out requesting that it be tested at a permanent auto emissions facility. "Thousands of letters went out each week," he said.

Smith said a car that passes its annual emissions test may soon begin
polluting, a problem detectable by remote sensing. For example, some motorists specially rig their cars to pass the emissions test and

change them back to normal following the test. And sometimes a car component can fail without warning, resulting in more exhaust.

MD LaserTech's system uses tunable laser diode technology to analyze a vehicle's exhaust plume for carbon monoxide and carbon dioxide, and ultraviolet light tests for nitrogen oxide and hydrocarbons. It can also be modified to detect a custom selection of gases.

The system also photographs the license plate of the vehicle being tested for identification. Two cameras allow day and night operation.

"We measure in half a second," he said. "The process is very, very fast." He said 1,000 vehicles can be screened per hour. It has accurately tested cars traveling between 10 and 70 mph, he said.

In addition to emissions, the device can accurately measure speed. So motorists who disregard speed limits can be mailed a citation based on information provided by the remote-sensing device. While this practice is not accepted in the United States, it is common, but not very popular, in some other nations, he said.

The whole apparatus, including a computer to monitor results, is carried in a van. It takes 30 minutes for one person to set up the remote system and 15 minutes to break it down, he said.

The sensing devices are designed, manufactured, assembled, calibrated and shipped from the firm's facility at 2024 W. McMillan St.

The company has 11 Tucson employees - primarily high-tech positions - and plans to add three new salespeople soon, he said.

He said the systems cost about $200,000 each and can test about 330,000 cars per year. He said a city the size of Tucson would need three or four systems to get a full view of vehicle pollution here.

"Three or four should allow you to reduce the number of cars needing inspection by 40 to 50 percent," while identifying 20,000 to 30,000 "dirty" cars, he said.

There are two companies vying for the remote-sensing business, and both are in Tucson, he said. Smith was involved with each firm.

Smith launched MD LaserTech in 1998 with the assistance of MD Mustang Dynamometer, an Ohio company that manufactures dynamometers and engineering test systems.

He had earlier worked at Remote Sensing Technologies Inc., a manufacturer of remote-sensing systems that he left four years ago. That company was founded in 1989 and was later purchased by Envirotest
Systems Corp.

He said MD LaserTech expanded the capacity of earlier infrared systems by adding the tunable laser diode technology, which allows the
system to test vehicles from a greater distance, is not affected by water vapor and offers quicker, more accurate results.

Photos by Chris Richards / Staff: Dennis L. Smith is president of MD LaserTech, a company that makes systems that can check auto emissions remotely

The remote-sensing systems can inspect vehicles traveling anywhere from 10 to 70 mph. A camera with the system photographs license plates so that vehicles are matched with corresponding test results.

Well, you weren't entirely wrong in being skeptical of the enforcement side, Jim.

I spoke with a supervisor with ADOT's emissions program earlier today. He knew quite a bit about the vans, surprisingly enough. According to this representative, the agency does NOT have any contract with MD LaserTech, but because MD LaserTech is based in Tucson, they have been given permission to do testing on Arizona roads. He also said that ADOT, nor any other agency in Arizona, does not under any circumstances mail citations of any kind to exhaust-violators. He did describe some type of polluter telephone hotline that the state has run for several years now whereby a citizen can call in a vehicle they see emitting excessive dirty exhaust, and ADOT will mail a "notice" to the owner of the vehicle that a complaint was received, and reminding them of state law. He also made clear that police officers have the ability to cite vehicles emitting dangerously foul exhaust through a normal traffic stop, but he reiterated several times that there is not currently any government sanctioned "photo emission violator" type system in place, and he did explain that MD LaserTech simply tests their equipment as they develop it (without any mailings going out) on Arizona roadways, because they are an Arizona company.

Anyway, the topic has kind of diverged from scanners, but I think everyone was a little on and a little off on this one. The vans really are "smog dogs", but they are not actively doing any kind of enforcement here in Arizona, according to this guy with ADOT.

Great job to "schmich" on finding the article, regardless!

Dan

From: Michael Todd
Topic: 1776 Message: 1785

Look as far as you want.
Perhaps I can help you.
Contact the Arizona Dept of Motor Vehicles and ask them.
They will be glad to enlighten you.

They use sniffers that are extremely sensitive as well as lasers from what I am told.

You can also contact the DPS. Spoke with my buddy who is the Metro 700 and he confirmed with me again tonight that they are smog dogs, and function in the capacity as previously mentioned on the list

Hope that helps

Mike

Subject: RE: [ArizonaScanner] PCSO radios

While the concept of "SMOG DOGS" may be interesting to some?, with the amount of traffic on the interstate system and the wind that is created by such traffic thoroughly mixing the exhaust from dozens of vehicles together, combined with the inability to stick a camera in between cars to take photographs as they go by at 55-75 MPH, I find the "SMOG DOGS" concept extremely difficult to swallow. Perhaps we need to look further and with more clarity at this issue.

Correct!
No enforcement but you do get a nice letter telling you of your cars foul exhaust and that it wont pass emissions when you attempt to renew your tags.

When i said PINK paper, I didn't mean specifically a citation, but rather a "pink sheet of paper" that tells you of your cars problems/

The APCO will be holding their annual expo in SLC in August.

If you happen to be in the SLC area during that time you might want to monitor the amature radio bands .. should be some interesting radio traffic.

2001 Conference & Exposition

From: T. Weaver
Topic: 1782 Message: 1788

Smog Dogs were used up here in Phoenix for a year or two, but the program got killed, either by Hull or by Groscost (gee...anyone remember him??!) not approving funding for the program. I also recall questions as to their accuracy being raised.

Used to see these vans all the time, especially on the 101 loop in the West Valley (bet. 59-75 Avenue) and on I-17.

As I recall, there was no citation then, either. Just a letter saying the car would fail. Glad it was killed.

But scared it's being raised again. I wonder if people will shoot these cameras like they have some of the red-light cameras in Paradise Valley.

Government has grown too big for its britches. But that's another thread, on another list!! :)

Topic: 1782 Message: 1789

Just as a note of interest. When I lived in CA up to 2 years ago (Yuck!) the CA DOT was funded a large scale program of this "Smog Sniffer" type and after about a 3 year period it was scraped!! The vehicles used were sedans of various light colors which were then given to CHP and are now used as the unmarked cars they use in some areas.

No markings, no light bar usually just a base loaded whip on the deck. The interesting thing about the cars is the colors selected just seem to blend in so well with all of the other cars on the road. I suspect they must have worked at the color selection a good bit.

Anyway, the sniffer project was a bomb in CA! Rumor had it they were going to try again with some new technology but no funds!

1790. Remote Weather Sites ????

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-22 15:55:39 UTC
From: ahoecker@citlink.net
Topic: 1790 Message: 1790

I have a question for any info on a few sites I have seen while driving on northern AZ hyw's. The closest one to me is on US Hwy. 93 about 25 miles north of Kingman just past Chloride, AZ.

It is a small site, perhaps 25 foot square, with a chain link fence surrounding it and has the usual array of wind speed, direction, temp and water gauge instruments visble. The TX antenna is a multi element Yagi that seems to be sized for the 450 MHz range. This site has the yagi pointing north east.

There no signs on the equipment or fence indicating what agency or company is envolved. No silly FCC type warning plaques either. Does anyone have an idea what service this is and what frequencies they may be using? I have seen other such sites but can not remember there location.

August,
It doesn't happen to be somewhat square at the bottom and have a
"cone" type top or look like a nose of a missile does it? I know that the
FAA uses blgd's similar to what you are describing for commercial aircraft.

No Charles not at all! In fact there is no building as such.
All of the protected equipment is housed in Hoffman type
enclosures. It doesn't look very "Federal" at all. You know,
the usual super overkill type look.
Thanks any way,
August

1793. PCSO Radio Issues -- Trunking in Trouble?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-22 18:53:10 UTC
From: Jim Hagedon
Topic: 1793 Message: 1793

I had been following this thread for a couple of days ago and haven't had a chance to weigh in until now.

For those of you who are, like me, interested/concerned about the issues 800 MHz. trunked systems are raising for the public safety arena, there is another discussion group, made up primarily of professionals in the LMR industry, that have been airing their concerns on this topic. Some of these folks are pretty sharp and then there are others, like me, who are just hangers-on. The Yahoogroups name, interestingly, is NEXTEL1, and the moderator is very active in searching out articles primarily concerning IDEN (Nextel technology) and SMR's (which is technically what the city/county/state trunked systems really are).

The public safety thread really got started with the Nextel's public safety interference problem, but the group decided and the moderator wisely, IMHO, agreed, to allow an in-depth discussion of the problems that have been caused by over-selling 800 MHz. trunking to local governments, especially in the public safety arena. From reading the posts to this group, it is pretty obvious that this is a nationwide problem. I posted the recent Arizona Daily Star article on Tucson's planned system to the group and there are similar postings of articles from communities all over the country, many detailing problems that have come close to getting people killed because their radios wouldn't work.

Before we all get our hopes up, I think it is also pretty obvious that trunking and digital AND encryption are here to stay. There are too many advantages to the system "owners" to expect the technology to disappear. Many of the problems attributed to trunking are really problems with the 800 MHz. band and as trunking becomes more common in UHF and VHF, most of the coverage and interference problems will begin to be abated (although the physical size of transmitter circulators/combiners and filters at the lower frequencies will probably mean that equipment shelters will be getting a lot bigger!).

There have also been several good links posted to on-line technical papers on trunked system theory and design. One particular 75 page presentation by an independent consultant for an Eastern US county offers trunked vs. conventional system proposals, discussese competing technology and manufacturers, and even includes a pretty fair primer in microwave link design parameters. Probably not of interest to the entire group, but I've bookmarked or saved many of these for personal reference and will be glad to forward to those that might be interested.

High (physically) on the side of a hill near Tucson,

Jim Hagedon
AE8R and other stuff

1794. FW: Editing - PLEASE READ

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-22 20:22:48 UTC
From: Dan Rollman
Topic: 1794 Message: 1794

Hey folks,

Just wanted to pass along one of four messages like it that I have received in the past week or so.
The participation recently has been great... but we all (myself included!) need to remember to re-read our entire message before pressing send... this means not only the portion of a reply that you wrote, but also the portion you are quoting and the footers present.

The footers are important to tell people how to get to the list webpage to alter their settings, etc., so we need a footer, but not 4 or 5. Yahoo claimed a while back to have solved the problem of threads having multiple footers on the bottom (the system is supposed to remove "quoted" footers and only have one) but this doesn't seem to be so. Please remember to remove all footers from your messages (a new footer will be added by Yahoo when the message is relayed), and also remove all quoted portions that are not absolutely necessary. Also, don't quote more than one message. Everyone can go back themselves if they want to read the thread 3 or 4 messages back. With the volume of messages that sometimes flow through ArizonaScanner, it becomes quite annoying for many to have to filter through 100 lines or more of quoted material to find a couple lines of a response.

Again, I am as much guilty of this than anyone, and I will work on it. We just need everyone to READ their entire message BEFORE hitting send, and REMOVE EVERYTHING that is not absolutely essential to the reader understanding your message's content.

Thanks guys!

Dan Rollman
List Operator

Hello Dan, any chance the users are going to ever figure out how to edit? Going thru 11 messages all with the same info over and over is really annoying....switching to non digest mode would only make it worse...you have a nice list and very informative, just maybe a class on editing would help.

1795. Virus alert

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-23 08:53:19 UTC
From: tracy@freqofnature.com
Topic: 1795 Message: 1795

My final word on this (don't want this thread to get out of hand).

I normally would not post a virus alert here but this virus has probably propogated to users on this list.

If you have a web site with your e-mail address on the web site then this will affect you. This virus takes the e-mail addresses listed in the infected computers temporary Internet cache files and sends the virus attachment to those e-mail addresses and attaches a random document from the infected computer to the code.

Those of you on the list that do not run a web site will probably not receive this virus, but take the same precautions when opening ANY e-mail attachment.

I also want to make it very clear to everyone that I have NOT been infected with this virus but wanted to sound the alarm to those at risk. Know that I am very security conscious. My profession is that of Network Administrator so I put bread on the table keeping such things at bay.

Nuff said.

1798. FW: New Yahoo! aircraft listener's group

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-27 17:24:14 UTC
From: Temp Berdan
Topic: 1798 Message: 1798

Hi all,
For those of you who are interested in what is overhead, here is a new SW group that Iden has started which will cover AZ and adjacent states, which could be very useful for listening to cross country traffic that is coming our way. Milcoms included.
IMHO, this group should supplement our listening pleasure, once it gets up and running.
FYI,
Temp
In SEZ
//////////
P.S. At this very moment, I am listening to a chopper tour of the Sedona area on the SEZ Unicom of 123.00.
Unfortunately for the pilot, he has also keyed his 123.000 transmitter in with his intercom narration and every plane nearby is trying to overcome his equally strong transmission.
I'm learning a lot about the area..... including where there are bare caves in the local cliffs. That's right bare caves, but his passengers are currently looking for bears ! :)

1799. RE: [ArizonaScanner] Re: 164.550 Active all night

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-27 17:37:47 UTC
From: Dan Rollman
Topic: 1455 Message: 1799

Well it was back in early June that we talked about 164.550 as a new federal repeater, and never identified it (as I recall).

I finally got a copy of TrunkStar780 software for unattended scanning, logging, and digital audio recording for research purposes. One of a hundred or so frequencies I was logging and recording last night as I slept was 164.550. This morning, I checked the logs and played back the audio files. TrunkStar780 allows you to pick a channel and "chain" the audio from that channel when you playback, so even if you recorded a hundred or more channels, you can play ALL the audio on one specific channel, in a row, and then move on to the next channel and play all the nights audio from it, etc. Needless to say, I recommend TrunkStar780 from www.scanstar.com.

Ok, so 164.550. I got excellent audio that allowed me to figure it out. It's a U.S. Border Patrol Repeater on Black Mountain (up in the Black Hills north of Cave Creek, AZ). I did hear the dispatcher called "850" several times, which is the last 3 digits of the callsign of the Phoenix office of USBP.

There ya have it.

Dan

Subject: Re: [ArizonaScanner] Re: 164.550 Active all night

John,

They could very well be checking out Comm in this area. From what I have heard, the Feds are building up in the area but I have no idea why nor could I care why. They are just making scanner listening more interesting :)

From all that I can tell, they are more then likely Costumes officers doing a stake out. I heard a few guys talking about the number of people in a group and saying they should just do a tour, so it could also be USBP using the freq. with the permission of Customs. Remember the illegals that died in the dessert last week, they are stepping up patrols so that doesn't happen again.

Like I said, I could care less what Federal Agency is using it, but it do make for good listening don't it? :)

Keith,

I carry this freq as a US Customs frequency. On another Customs frequency, 164.60mhz, I've heard callsigns Charlie-XX testing out radio equipment and measuring the signal strengh and quality. Are these guys acting like tech/comm guys?

John

Morning Dan, and the group.... That software sounds like some
nifty stuff, I would be interested in hearing further reports about it!
In reference to 164.550, there was a resolution as to what that
freq is all about (I wish I could remember who explained it to me.. sorry
for the brain fart!) I believe the name explains it all:

OCDETF (Organized Crime and Drug Enforcement Task Force)

Apparently it's a multi-agency, muti-use freq much like the
169.450 Alliance freq.

To: ArizonaScanner@yahoogroups.com
Subject: Re: [ArizonaScanner] Re: 164.550 Active all night

Here it is:
==========
=======
OCDETF
Organized Crime and Drug Enforcement Task Force

Through the vehicle of the Organized Crime Drug Enforcement Task Force
(OCDETF), the U.S. Attorney for the Northern District of Oklahoma
pursues major drug trafficking organizations formed for the purpose of
importing, manufacturing or distributing large amounts of controlled
substances and for financing and laundering the proceeds of such illicit
activities. The "Drug Task Force," as it is known colloquially, is
comprised
of prosecutors and law enforcement personnel from a variety of federal,
state and local agencies.

The Drug Task Force places a priority upon countering those narcotics
organizations which routinely rely upon violence to perpetuate their
operations of intimidation, enforcement and retaliation. The
investigations of such organizations are typically multi-year,
multi-defendant complex endeavors which commonly demand sophisticated
electronic and undercover techniques, and which require considerable
prosecutorial involvement from their inception.

In addition to the Drug Task Force cases, the U.S. Attorney's Office
routinely prosecutes narcotics cases which otherwise do not fall within
the guidelines established for task force attention. These cases involve
drug seizures occasioned by automobile stops or airport encounters, as
well as the more aggravated drug-trafficking found at the local level,
including the illegal use of prescriptions. The successes of the OCDETF
program and other narcotics prosecutions are a direct product of the
professionalism and enthusiastic cooperation of the investigators
assigned to the cases from various agencies, and those assigned to
support them.

1803. Freqs for MCSO Search at Pinacle Peak Rd?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-28 22:30:38 UTC
From: scanbc780@netscape.net
Topic: 1803 Message: 1803

I know 159.090 is about the only frequency I can monitor for MCSO but there are also posse's out there for the Anthony search on 83rd and Pinicale Peak Rd.. Is there any frequencies I can monitor other than 159.090 for this detail...

1804. RE: [ArizonaScanner] Freqs for MCSO Search at Pinacle Peak Rd?

From: Andrew Clark
Topic: 1803 Message: 1804

I heard them going 10-8 on the way out there this morning on Search8 repeater. Once they get out there, they're probably on simplex. That's how we conduct most searches. If you're within simplex range and can't hear them, try searching the County trunked system, they may be on one of the "special" analog talkgroups. If you still can't find them, they're either on a digital talkgroup or they're not talking much.

Hi Folks,

Thanks to those who have given their input to the poll on the ArizonaScanner list regarding the size and design of the future 7th Edition of the Southwest Frequency Directory (mid 2002). I will be closing the poll in the next day or two, but before I do, I'd appreciate any last minute votes from anyone who has not yet given their input. It takes just a few seconds. If you have input beyond that of the poll question, please feel free to email me back directly at danrollman@....

For the poll question, click on:

Good catch! Great software. It's very common for federal user's to simply refer to the last three numbers of the base station callsign when they working the base station.

Subject: RE: [ArizonaScanner] Re: 164.550 Active all night

Well it was back in early June that we talked about 164.550 as a new federal repeater, and never identified it (as I recall).

I finally got a copy of TrunkStar780 software for unattended scanning, logging, and digital audio recording for research purposes. One of a hundred or so frequencies I was logging and recording last night as I slept was 164.550. This morning, I checked the logs and played back the audio files. TrunkStar780 allows you to pick a channel and "chain" the audio from that channel when you playback, so even if you recorded a hundred or more channels, you can play ALL the audio on one specific channel, in a row, and then move on to the next channel and play all the nights audio from it, etc. Needless to say, I recommend TrunkStar780 from www.scanstar.com.

Ok, so 164.550. I got excellent audio that allowed me to figure it out. It's a U.S. Border Patrol Repeater on Black Mountain (up in the Black Hills north of Cave Creek, AZ). I did hear the dispatcher called "850" several times, which is the last 3 digits of the callsign of the Phoenix office of USBP.

There ya have it.

Dan

John,

They could very well be checking out Comm in this area. From what I have heard, the Feds are building up in the area but I have no idea why nor could I care why. They are just making scanner listening more interesting :)

From all that I can tell, they are more then likely Costumes officers doing a stake out. I heard a few guys talking about the number of people in a group and saying they should just do a tour, so it could also be USBP

using the freq. with the permission of Customs. Remember the illegals that died in the dessert last week, they are stepping up patrols so that doesn't happen again.

Like I said, I could care less what Federal Agency is using it, but it do make for good listening don't it? :)

Keith,

I carry this freq as a US Customs frequency. On another Customs frequency, 164.60mhz, I've heard callsigns Charlie-XX testing out radio equipment and measuring the signal strengh and quality. Are these guys acting like tech/comm guys?

John

1809. Dallas to Arizona: Thanks for the Info

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-31 00:52:09 UTC
From: Russell Adams
Topic: 1809 Message: 1809

I recently posted a request for info on the ArizonaScan list for info for my road trip to the Grand Canyon/Flagstaff area. Several of you replied with a wealth of info. I just wanted to thank everybody who provided me info ... my trip great and the scanning was fantastic.

I like the loads of federal and military monitoring info you post to your list, as well, so I will be staying for awhile. It has been my experience that frequency usage by the federal and military people in one area of the country are commonly used in a similar fashion in other parts of the country.

Great list! Thanks again,
Russell

You're welcome Russel.

I was wondering if you were able to find any new info. I was specifically wondering about the Meteor Crater. Did you get a chance to stop and search the bands there? I would guess it's under the jurisdiction of the DOI/NPS, but not sure if they have their own channel(s), or use the Painted Desert/Petrified Forest National Park channel, although the Park is about 78 miles east of the Crater.

Anybody else know?

I caught a tv news spot on this. One image the camera caught was a group of posse/deputies, and one had a Motorola FRS radio clipped to a chest pocket of his fatigues. I wouldn't be surprised to hear them there, or even on the new MURS channels when they resume the search. Something to keep in mind.

Otherwise, the nationwide SAR channel of 155.160 may be another possibility. The adjacent, former "Special Emergency" (PS) frequencies can be licensed to SAR groups.

Lastly, the FCC allows police agencies to use almost any frequency on a non-interference basis. For example, the Az DOC uses marine band channels and splinter frequencies within the marine band for their yard channels at the various complexes. Law Enforcement affiliated SAR groups may use them too.

John,

No. But I did notice everybody carrying Motorola Radius P10s. A pretty common general purpose radio. I couldn't tell if they were UHF or VHF. The antennas did not look UHF. I wasn't able to verify the freq(s).

I was able to monitor Flagstaff, Williams, and Coconino County. I got a lot of PL tones. The Az DPS info was great and right on the money. I tried Sedona while I was there, but heard nothing.

I'll post what I got when I get it all together.

On the westside, several of the deputies use FRS radios for talk around when
the state of the art system is not working good.

I dont know about Maricopa County, but here in Cochise County
155.220 is/can also be used!

>What's are MURS channels and what freqs are they? -Russell
Multiple Use Radio Service... is the following freqs:

151.8200 MURS (Multi Use Radio Service)
151.8800 MURS
151.9400 MURS
154.5700 MURS
154.6000 MURS

Some time recently (dates are not my thing!) the FCC set aside
thes freq as non-licsensed, shared use, BUISNESS freqs, with (dont qoute
me on this one) 2 watts output max. Hope this helps!

1817. Scannerstuff Newsletter

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-07-31 05:57:29 UTC
From: Dan Rollman
Topic: 1817 Message: 1817

Just wanted to let everyone know that the subscription-based Scannerstuff Newsletter, the focus of an online poll a few weeks back, has officially been launched.

Each month, Scannerstuff posts a new issue of the Newsletter online, including updates to frequencies, talkgroups, radio systems, fire station locations and resources, and more. Each issue also includes at least one detailed special feature article, with a focus on the operation of an area radio system, a public safety agency, or other radio-related news. While information in the newsletter generally focuses on Arizona, information for the other regions covered in the Southwest Frequency Directory may be posted when it is available.

Updates are posted at least once per month (with the monthly special feature article). Subscribers receive an email when each monthly issue of the newsletter is available for viewing. Subscribers also receive 25% off future all-new editions of Southwest Frequency Directory.

For more information and to subscribe, please click
http://www.scannerstuff.com/newsletter

Feel free to email me privately at danrollman@... if you have questions about the Scannerstuff Newsletter.

Multi-Use Radio Service is just that: Multi-Use. Basically, a VHF-Hi version of the Family Radio Service, with business users as well. Became effective last November.

The current power limit is 2 watts ERP. There are also some deviation/bandwidth limitations which limit which radio makes and models are MURS compliant. There are a few groups and several individuals who are requesting reconsideration/clarification of the rules, and until recently Motorola wanted it taken back from non-business users. Now, they appear to have changed their mind, but want some conditions put on it.

There is a MURS group here on Yahoo. They have a FAQ, and a copy of the rules, in the files section.

http://groups.yahoo.com/group/murs

To subscribe, email: murs-subscribe@yahoogroups.com

I think I've heard a transmission once on one of the 3 lower channels. Other than that, the two 154 MHz channels, which are the former Blue and Green "Dot" channels still have the typical business users on them. Wal-Mart, and a couple of fast-food drive-throughs.

John

Glen, I have no clue, to be honest. I had seen a program on PBS I think about meteors et al, and when they were at Meteor Crater, there was a guide who appeared to be dressed like a typical Park Service Ranger (Interpretor) there with a tour group. Smokey Bear hat and all. That's where my assumption came from that it was DOI/NPS. (Yes I know what assuming can do, *grin*) I was hoping someone could fill in that info. It's not in the Arizona State Parks list. (http://www.pr.state.az.us/)

Russell, do you recall what the "officials" there were wearing? Shoulder patches, vehicle placards, etc?

John.

I was having trouble setting up Type-1 talkgroups for Ftn Hills with Andy's download program ...
it still doesn't work right ... but in the process I discovered that I don't need type-1 for Ftn Hills Marshal's Department on the Scottsdale TRS anymore ....

I caught dispatch on TG 1456 referred to as chan 1 (previously 712-1), and car-to-car on chan 2, TG 1488 (previously 712-2) ... I assume they have the third talk group that they used to have in fleet 712 and that it's now 1520. As for local government 713-1, 2, and 3, I haven't heard them yet either on the old or any new talkgroups-- but I'm not in the hills during the daytime except on Wednesdays. I'll try to confirm next week.

BTW - what's the trick to get the program to work with type-1 setups (like Glendale's). It uploads 300-1, 300-2, etc., all as 300.

I looked at my type I talkgroup entries for Andy's program and they are
as follows:

300-01
300-02
...

Try adding the leading zero.

If this doesn't help, do you have the bank set for "TYPE1" on the "Bank"
worksheet, and the BC-780 bank set up for type 1? You may also want to
try turning "Fast Send" "OFF" on the "RadioWide" worksheet.

Hope that this helps,
Scott

Hello, I have Ft Hills Marshals as 63728 & 63840. Since SPD is Type II those are the Type II TG's that show up. I have used the Trunk Manager For Windows (http://www.interplaza.com/bensware//tm.htm) and it works great for the 780. Joe [Non-text portions of this message have been removed]

1826. Feds vs DPS

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-03 15:52:02 UTC
From: cmaness@leadm.com
Topic: 1826 Message: 1826

Lots of activity this morning on the Pinal Border Patrol repeater. DPS Phoenix Ranger assisting in the capture of numerous UDA's possibly armed and aggressive towards officers. Border Patrol requesting DPS dispatch that Ranger go to "KEE-a-TOW-ah" (spelled phonetically as best I can) frequency and then to "Alliance" frequency. Ranger pilot could not find either frequency in "his book". Am I right in assuming that 163.775 is KEE-a-TOW-ah and 169.45 is Alliance?
Carl

From: Dan Rollman
Topic: 1826 Message: 1827

Hey Carl,

Good catch! Kee-A-Tow-Ah is spelled Quijota. It's located between Ajo and Sells in Pima County (the repeater anyway, who knows where they really were). Output is 173.6875, transmit is 171.3125, and it has a 123.0 PL. This comes from the new list of 26 new Border Patrol frequencies / repeaters in the SWFD Update Booklet (www.scannerstuff.com). Alliance is in fact 169.450 as you thought. 171.075 is the transmit and the PL is 100.0.

1829. New EMSCOM Freqs for Yavapai County

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-04 01:36:38 UTC
From: radioprescott@yahoo.com
Topic: 1829 Message: 1829

DPS just sent us the new list of EMSOM local mtn top base freqs...
The usual MED 1- MED 10 duplex and the new:

MED 11 453.025/458.025 Mingus Mtn
MED 12 453.075/458.075 Mingus Mtn
MED 13 453.125/458.125 Mingus Mtn
MED 14 453.175/458.175 Mingus Mtn

These should cover most of Central/East Yavapai County and parts of
South Coconino..

Also added:

MED 15 460.525/465.525 location "Prescott" and "Weekes Ranch"

Prescott probably be at the ADOT/DPS tower in town.
Weekes Ranch is southeast of Bagdad in the Skull Valley Area

Per DPS Telecom...have the equipment and the sites ready, don't have
the techs to install it...

btw new e-mail address used to be AZscanner.cableone.net
now prescottradio@...

still monitoring "DC to daylight" from Central Yavapai County, AZ

Well, much to my chagrin, I've discovered that not only do I not have the latest version of the program, the one I have is severely down rev (2.0 when 2.5 is out).

I just finished downloading the latest and we'll see what happens.

And to Joe (ravenfall):

I noticed that your download to the radio had the GLD groups as type II, but I suspect you'll miss traffic that way, if they're really type I.

I think Scottsdale is (or was) called a hybrid - the first 6 blocks were Type II and the last 2 were type I; with the latest, it looks like the type I fleets are moving into the type II trunkgroups.

Thanks to both of you for the help.

hi dan,

dont know about missing any traffic, the scanner seems to get the beginning and ends of the traffic fine without missing anything. guess the only way to try it would be to have a scanner set as type 1 then type 2 and see if it all comes over with type 2.

Just wanted to let anyone interested know that the August issue of the Scannerstuff Newsletter subscription service has been posted at www.scannerstuff.com. You can also find subscription information there.

August issue includes all of the "page by page" updates that are included in the "Update Booklet" released in April, as well as:

-Info on new Fort McDowell Indian FD (no longer Rural/Metro)
-U.S. Fish & Wildlife Service statewide radio system
-Info on new Green Valley Fire District (no longer Rural/Metro). Includes a feature article on GVFD operations.
-new Tucson area Rural / Metro EMS numbering and radio channel usage
-Tip on monitoring "in the clear" federal law enforcement communications, silently skipping encrypted noise.
-Info on Mesa PD "simulcast" broadcasts to SID frequencies
-For the monsoon season, info on SkyWarn weather-spotter Network, including frequencies around Arizona

See www.scannerstuff.com

Feel free to email me directly at danrollman@... if you have any questions on the Newsletter service.

I would highly recommend "ScanColo". It is also a YahooGroups list. Type "ScanColo" in the search box on groups.yahoo.com and you'll find it. It is run by Brian Gould, who like myself publishes high quality LOCALLY made scanner information directories as well. Brian's Book is called Scan Colorado and if you like Southwest Frequency Directory for scanning in Arizona, you'll like Scan Colorado for scanning around Denver! Brian and his staff has consistently put together a great directory. There's my plug. :) Anyway, I'd recommend the ScanColo list on Yahoo and a copy of Scan Colorado as well.

1840. Re: Colorado scanner groups

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-07 08:32:55 UTC
From: John H. Guetherman
Topic: 1837 Message: 1840

I have a copy of Brian's book. Ordered it from Ham Radio Outlet, and it was shipped from the Denver store. $23.00 last year. I was up in Breckenridge in June '00 with a group of friends, although I didn't do much listening.

I prefer the format of the SWFD, personally, but the Scan Colorado book has some really good detail to it. He also has a website:

http://www.frii.com/~rmedic

His email is rmedic@...

He also had a listserver on www.qth.net. ScanColo is/was the name. This may be what is now the Yahoo group. I think New Mexico, Utah, and Nevada could use good info like this too. Southern California has the detail edition of Police Call available, as well as at least two Yahoo groups.

Just thought I'd jump in here to add my $0.02 worth.

It's another DPS CI frequency in the Tucson area. Repeater is on Tumamoc Hill but they are also using it simplex quite a bit. They've been doing quite a bit of narcotics type enforcement on it, as well as other investigations.
No reason interagency investigations couldn't use it, either. Certainly not limited to DPS officers when need be.

450Mhz - Telemetry/Control Data
The end of trains have a little black box on the car joint that is attached to the airline and other pertinant train "stuff". This box has a small UHF antenna to transmit the end of train data to the engine, and a blinking red light for safety purposes. These end of train monitors can be found on 457.9375Mhz. The engine also transmits information in digital data format on 452.9375. This freq might be heard better due to power and antenna location on the engine. This will tell you when a train is nearby as you pick up these low power transmitters. Just a bunch of noise - nothing of non-railfan interest. On longer trains that need extra engines either in the back or middle of the train (called Power Units, Pushers, Helpers, Distributed Power), the 450Mhz frequencies are also used to control those helper units from the front of the train - using telemetry to control brakes and power needed. Again there is nothing really worth listening to except for the occasional data burst at low power - something train buffs can use to chase a train.

Wayne :)

Very interesting! I thought it reminded me of a different, but similar
program.
After reading the FAQ on the website...it is!!

I didn't realize that the instructions to the trains were also transmitted
in
this fashion. It's not End of Train, but even better, if you like to know
where the
trains are on the tracks.

Have you used this program? I've been able to pick-up the dispatch freq
but
nothing from the trains, possibly because the UP trains don't transmit
Advanced
Train Control System information??

If you have used it, do you have the track screens for the Tucson tracks?

Thanks,
John

1853. Re: [ArizonaScanner] Remote Weather Sites ????

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-13 19:05:26 UTC
From: walter.howard@juno.com
Topic: 1790 Message: 1853

Sounds like ADOT's Ice Warning system.
They use an 800 MHz frequency to return weather data for
ice alerts along Interstate 40.

1854. RE: [ArizonaScanner] New EMSCOM Freqs for Yavapai County

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-13 21:59:58 UTC
From: Michael Todd
Topic: 1829 Message: 1854

Walter

will these new med channels work in duplex fashion as med 1-10 or will they
be a repeater type system.
I can not always hear both sides of the patches.

Med 4 Seems to be repeated while others dont.

Any suggestions?

Mike

Also, notice that MED 15 is THE SAME FREQUENCY as DPS CI 5 with a
different PL.

1855. 164.550

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-14 06:43:34 UTC
From: ravenfalls@aol.com
Topic: 1855 Message: 1855

Hello all,

Listening to 164.550 while heading to California by Agila I heard a unit calling 850 and the same tonight while in Phx. 850 is dispatch in El Centro for the Blythe Sector of the US Border Patrol. Tonight a unit was making a stop on Hwy 78 in California. Also the Blythe Sector goes from the Maricopa / La Paz County Line to Desert Center then north just south of Kingman then south just north of El Centro. So it seems the repeater can be linked to 163.750 the primary for the Blythe Sector in California and 164.550 has repeaters on Smith Peak by Wenden, Az and a repeater somewhere in the Phoenix area. 164.550 could be the primary repeater for the Arizona side of the Blythe Sector since I have heard no traffic on 163.750 until I reach Quartzite.

Joe

1856. Airband Frequencies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-14 10:50:32 UTC
From: John H. Guetherman
Topic: 1856 Message: 1856

Hey all, I was wondering, I see that Air Evac is shown in the SWFD as using 128.825 and 128.850 for their helicopter and fixed-wing control respectively. Has anyone actually monitored them on these two channels? I've got an open carrier on one of them here at home. Does Life-Net or Native Air have airband allocations like this as well?

Phoenix PD is using 123.550 now, instead of 123.500. I'm not aware of DPS, MCSO, or Mesa PD having more than one bird up at any one time, in the same area, so would they have an air-to-air company channel as Phoenix does?

134.050 is used by the traffic reporting planes during the typical rush hours. Lots of humorous chit-chat.

Of possible general interest: 121.950, 123.300, and 123.500, "are available for assignment to aviation support stations used for pilot training, coordination of lighter-than-air aircraft operations, or coordination of soaring or free ballooning activities." "Aviation support mobile stations will be assigned 123.300 and 123.500 MHz." (This means balloon chase vehicles.) 47 CFR 87.323 See also 47 CFR 87.319:

Aviation support stations are used for the following types of operations:
(a) Pilot training;
(b) Coordination of soaring activities between gliders, tow aircraft and land stations;
(c) Coordination of activities between free balloons or lighter-than-air aircraft and ground stations;
(d) Coordination between aircraft and aviation service organizations located on an airport concerning the safe and efficient portal-to-portal transit of the aircraft, such as the types of fuel and ground services available; and
(e) Promotion of safety of life and property.

I've heard gliders/soaring aircraft on 123.500 here in the Valley. Possibly up in the northern part of Peoria. May be why Phoenix PD went to 123.550.

1857. RE: [ArizonaScanner] Airband Frequencies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-14 11:43:22 UTC
From: Michael Todd
Topic: 1856 Message: 1857

Native Air operates Nation Wide on America West's "Cactus Net" for Fixed Wing Control. That freq is 130.175 (I believe)
Theres constant traffic on that freq but it's usually a Cactus plane telling maintenance that they crapper is backed up.

Native Operates all helicopters on a 900 mhz LTR system for the most part. They do have ability to a 450 mhz LTR system also.

Last but not least, all the aircraft have Nextel units and those are becoming increasingly popular for ground communications.

As for Phx PD a good majority of the time you will hear them all working on the common air to air freq of 123.025.
If you are in the right spot you will often times hear firebird and falcon chatting about the upcoming weekend.

Phx PD does have a company freq as well. Have no info on a change of freq. I am hearing them talk to Deer Valley which is what they call their hanger, on 123.500 right now.

Hope this helps

Mike

Date: 2001-08-14 13:14:34 UTC
From: Don Armstrong
Topic: 1858 Message: 1858

Morning Folks... have any of you had the misfortune of having to follow those "wide" or "oversized" loads down a 2 lane hiway for miles and miles??? Well down here in the Sierra Vista area, it's a semi-common occurrence... frequently, those "loads" are not only escorted by the normal pilot vehicles, but also by at least 2 (sometimes more) DPS vehicles! Well yesterday I had the pleasure (?) of following one of those " rolling hiway roadblocks" from just outside of Sonoita all the way to Nogales on Hiway 82... a trip of approx 40 miles!!.. Fortunately, the speeds were maintained around 50 mph, but there are several hills between Patagonia and Nogales, which forced us to move at the "break neck" speed of 25 or less on several occasions!
Seeing as this trip was "work related", I had my trusty UHF work handheld with me, and since I was out of area for the trunk system we use, and was bored half to death, I decided to flip through the channels to find the 2 DPS freqs I have programmed into it, maybe I might get lucky and hear these guys... you see there was 3 DPS vehicles in this convoy of 2 ancient US Navy barges..... Well, sure enough, they were chit-chatting with each other on the State Wide UHF freq. (460.225) in the "car-car" (simplex) mode!!! Having the ability to listen to these guys sure made an "unbearable" trip much more bearable!!

From: Dan Rollman
Topic: 1856 Message: 1860

SA,

Not sure "Cactus" is derived from the confusion with American.

"Cactus" is a term for America West derived from the fact that "America West" has too many syllables. Stating "America West" would not confuse controllers since they'd hear the word "West" and quickly differentiate from just "American". The trouble was, saying "America West" over and over takes too long on busy ATC frequencies. "Cactus" is only two syllables and helps it flow out faster. If they said "America West" on the radio, they'd have the longest designator of all the major carriers in terms of syllables.

I did a good bit of contract work with AWA and also spent some time with the 3 guys that maintain the Cactus Net radio system and their 900 MHz airport systems in Phoenix, Vegas, and Columbus, etc. so I did inquire about "Cactus" throughout the airline.

"Cactus Net" is the name they came up with for their radio system, since the aircraft designator is Cactus and many in the biz have simply nicknamed the whole airline "Cactus" (i.e., "he's flying Cactus").

For a bigger bit of trivia, see if you can figure out why "HP" is their tail number suffix (as in N905HP) on many aicraft (and flight numbers!), where other airlines use only the logical two letter abbreviattion of their airline (AA, CO, AL, TW, UA, etc.)

We could go on to the usage of the phrase "LUV" and abbreviation "WN" for Southwest, but then we'd have to start a new Yahoo!groups list. :)

Dan

Just like "Pan American Airways" was known as "CLIPPER". And I think
American used to be "FLAGSHIP".

HP has something to do with AWA's lineage from Hughes-AirWest/Pacific
Southwest Airways, I think.

Thanks Mike. I found Firebird using 123.550 after several times hearing them on 123.025, and one would tell the other to go to "company", but they never came up on 123.500. Just started searching the 123-124 segment, and found them. I guess it's possible they're using 123.500 for air-ground between the birds and the hanger, and 123.550 for air-air. I'll have to listen to all three of those for awhile.

Thanks for the 130.175 channel. I'll see what I can hear there.

From: Dan Rollman
Topic: 1856 Message: 1864

Steve,

Phoenix is "PHX", or "KPHX" if International prefix is used. HP represents America West, and everything I've been told, it does somehow go back to the old days of "Hughes Pacific Air West" and the various names before. I've heard many many different stories relating to that (original financiers came from Hughes Pacific; The first leased aircraft were former Hughes Pacific lease units and tails were left the same; and many others). All have definitely centered on the Hughes Pacific name though. Anyone else know anything more exacting?

In addition to the tail number, tickets will show "HP824 PHX BOS" or "HP192 SNA LAS" or the like. I've also noticed that Continental-issued boarding passes in America West stations operated by Continental ticket counter staff (like Orlando), also say "HP" before the flight number, as a prefix. Anyway, perhaps we are going to deep into this for AZScanner. If anyone else has more info please email me privately at danrollman@....

Dan

Dan,
Well I can let you know why hp is used on the Continental boarding passes. Continental is a code share with america west..Our same guys that work america west.as myself also work for Continental but get paychecks from AWA. British Airways is like this too. We work for British but have to wear green vests.. If your ever out there at the airport. Look at the Continental rampers and you will notice they have america west uniform on under there nice neon orange vests, also with British except neon green vests.. Well any ways I know we have alot more co-shares but am not sure.
gotta go thanks,
Steve

1866. Re: [ArizonaScanner] New EMSCOM Freqs for Yavapai County

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-16 23:55:54 UTC
From: walter.howard@juno.com
Topic: 1829 Message: 1866

The new frequencies are what we refer to "Free Standing Repeaters".

They are not monitored or even connected to EMSCOM (DPS).
The only connection they have is for troubleshooting from Phoenix.

If Dan would like, I'll scan the latest FSR map and upload it to the
files area.

Also, it's more likely that you mean MED 5 being repeated, as this is the
statewide calling channel

1867. Re: [ArizonaScanner] Airband Frequencies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-14 21:11:06 UTC
From: Michael Hamann
Topic: 1856 Message: 1867

WN stands for "We're Nuts" for SWA :)
Also, if you want to listen to some more flight training frequencies, north of the McDowell Mountains around the Rio Verde area, around the Anthem area, and down south around Williams Gateway, you can hear "Northwest Practice Area, Northeast Practice Area, and Southeast Practice Area" on the frequency 122.750.

Subject: RE: [ArizonaScanner] Airband Frequencies

SA,

Not sure "Cactus" is derived from the confusion with American.

"Cactus" is a term for America West derived from the fact that "America West" has too many syllables. Stating "America West" would not confuse controllers since they'd hear the word "West" and quickly differentiate from just "American". The trouble was, saying "America West" over and over takes too long on busy ATC frequencies. "Cactus" is only two syllables and helps it flow out faster. If they said "America West" on the radio, they'd have the longest designator of all the major carriers in terms of syllables.

I did a good bit of contract work with AWA and also spent some time with the 3 guys that maintain the Cactus Net radio system and their 900 MHz airport systems in Phoenix, Vegas, and Columbus, etc. so I did inquire about "Cactus" throughout the airline.

"Cactus Net" is the name they came up with for their radio system, since the aircraft designator is Cactus and many in the biz have simply nicknamed the whole airline "Cactus" (i.e., "he's flying Cactus").

For a bigger bit of trivia, see if you can figure out why "HP" is their tail number suffix (as in N905HP) on many aicraft (and flight numbers!), where other airlines use only the logical two letter abbreviattion of their airline (AA, CO, AL, TW, UA, etc.)

We could go on to the usage of the phrase "LUV" and abbreviation "WN" for Southwest, but then we'd have to start a new Yahoo!groups list. :)

Date: 2001-08-18 01:21:11 UTC
From: Chad Kurthy
Topic: 1869 Message: 1869

Hello,
My name is Chad and I am new to Tucson. I am a freshman at the University of Arizona and just moved her from Orange County, California a few days ago. I was wondering what fire/police/ambulance freqs would be good to monitor for Tucson. I have no idea how anything works out here (i.e. private ambulances, FD ambulances, or any thing). I am a Fire Explorer in Orange County and hope to become involved in the Tucson FD or PD. If anyone has any info on freqs to monitor and/or programs like the Explorers that Tucson FD or PD offers I would greatly appreciate it.

Thanks again,

Chad

1870. Scanner Club Meeting SATURDAY!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-19 02:03:24 UTC
From: Dan Rollman
Topic: 716 Message: 1870

Ok finally, ample notice!

The monthly scanner club get-together in Phoenix, hosted by Incident Command Page (Arizona's scanner club) is this Saturday, August 25th, from 6PM to 9PM. Feel free to come by anytime after 6:00 (later is fine), grab a burger and Coke if you like, and chat with other local hobbyists about scanners and public safety in Arizona, as well as aircraft radio, new technologies, and more!

These get-togethers are very informal. We just get some food and hang out chatting and sharing info for a few hours. Normally we see 12 to 18 people at the get togethers, but more the better! Location is the Fudrucker's hamburger restaurant on the North side of Highland, just East of the A-51 (Squaw Peak Freeway).

I invite you all to come, and I personally would love the opportunity to meet more of the people who participate on the ArizonaScanner list!

For a map and more info, go to http://www.incidentcommandpage.com enter the site, and then click on "Next ICP meeting".

Hope to see many of you there!

Dan Rollman
ArizonaScanner List Operator / Scannerstuff owner / SWFD Editor / ICP Member / etc. etc.

I believe that the rebroadcasting is being done by the ATV (Amateur TV) group. I get it a little better here in the south of Scottsdale on a Diamond Discone. Now that the Endeavor has undocked, the rebroadcasting will likely cease shortly until the next STS/ISS docking. I had a good visual sighting of the two about four minutes apart this evening shortly after 20:00.

1873. 154.815.....

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-22 12:45:56 UTC
From: Don Armstrong
Topic: 1873 Message: 1873

Morning to the group... Question, recently there has been some interference here (in Cochise county) on 154.815. By interference I mean a solid, continious, carrier present on that freq. This freq is the CCSO F-3, Car-Car (simplex) channel, and it (the carrier) has rendered that channel virtually useless in the western and north western portion of this county! Is anyone else hearing a solid carrier on this freq!?
I know that this freq is also in use in the Tucson area (TPD F-8... I believe), but I'm too lazy, at this time, to look it up and see who else might be using this freq in the area!
I did notice some "digital packet" type sounds present in the carrier yesterday afternoon.... but one thing is for sure, this carrier hasnt droped (timed out) at all that I am aware of!

Donnie
That freq is TPD F-8 and I'm getting the same thing your hearing here in Tucson.
That freq is also used in Coconino and Mohave counties, Bullhead City, Mesa, Sierra Vista, Springerville, and Las Cruces, NM.

From: Dan Rollman
Topic: 1873 Message: 1875

Donnie,

Also keep in mind, Tucson PD F8 is almost exclusively digital mode, so they are more than likely the digital transmission you are hearing. The stuck carrier could of course be someone else.

Dan

Donnie
That freq is TPD F-8 and I'm getting the same thing your hearing here in Tucson.
That freq is also used in Coconino and Mohave counties, Bullhead City, Mesa, Sierra Vista, Springerville, and Las Cruces, NM.

Don, John,
I live in the Kingman Golden Valley area and programmed in 154.815 and
rotated the 6 element beam round and round and hear no steady carrier
this far north! Just for info.

I have posted the latest map of EMS stand-alone
repeaters to the files area on YahooGroups.

If you have problems getting it from there, let me
know and I'll send it to you privately.
Please only ask if you can't get it the other way.

1879. Scanners w/CTCSS Question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-23 09:35:59 UTC
From: John H. Guetherman
Topic: 1879 Message: 1879

I was wondering, if you have a scanner with CTCSS and/or DCS decoding ability, and want to listen to a specific user on a frequency which has multiple users each with a different tone/code, wouldn't the scanner still stop on that channel when in scan mode, just not produce any audio?

It would still stop the scanning process, keeping you from hearing any other transmissions on any other channel(s) you have programmed, correct?

Would it be feasible for the manufacturers to somehow keep the radio continuing to scan, unless the tone/code of the transmission matched with what you programmed in? This might be helpful during low-band skip openings, or a tropo opening on high band.

Does LifeNet share 463.200 with anybody? (I suppose I could go look myself.....)

1880. Battalion Chief Vehicle Types

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-23 09:59:06 UTC
From: John H. Guetherman
Topic: 1880 Message: 1880

I know that most of the Valley's BC's use the Chevy Suburban as their vehicle. There are a few exceptions, however. Tolleson had a 4-door Ford Explorer for BC 161, and recently upgraded to an Excursion. Talked to one of their guys a couple of days ago, and he said they wanted to go to a crew-cab pickup. (Avondale EP and U 172 crews regularly shop at the Fry's at 107th Ave. and Indian School Rd., where I work. Occasionally, Tolleson LT 161's crew, or one firefighter driving the old BC 161 also shop there.)

I think Daisy Mountain BC 141 had/has a Dodge Ramcharger. Mesa BC's 201-202-203 had/has Chevy Caprice sedans. Peoria BC 191 has a 4-door Chevy Tahoe as a backup to their Suburban. They also use it to ferry people to/from training sessions. (It doesn't have a day-to-day on-air ID.) Rural-Metro uses Chevy Blazers from what I've seen. Can anybody post an updated list of the make, model, and year of each BC vehicle in the Valley? Or anywhere else in the state, for that matter. Anybody got pictures they can share? I should have a couple of BC 191 and a Phoenix BC (3?). Just no way to scan them.

Lastly, who does the radio installs for the BC's? Is it in-house, or contracted to a commercial radio shop? If I ever win the lottery, I would like to install a boat-load of radios in a Suburban. I figure if the FD's trust a specific radio shop to do it, I can trust them to do it, too. If it's an in-house job, oh well.

Incorrect assumption. PL/DPL capable scanners like the BC780XLT don't even stop on the channel if the wrong tone is present.

I would suggest contacting a guy named Dave Greenberg at fyrfotog2@...
Dave has a photo of every fire apparatus in the valley and nearly every in the state. The list is complete with call sign, VIN Number and anything else you want to know. Typically he has several pics of the same truck as it gets moved around and re-numbered.
Dave is a photographer for Fire Apparatus Journal and could probably tell you when they last rotated the tires, and Perhaps even of times someone has sat in the drivers seat of the truck.

Phx is playing around with the new 4 door Ford Truck things.

Mesa has finally gone to suburbans

Rural Metro uses blazers and Tahoes.

All the radios and MDT's are typically installed by Phoenix Fire if the dept is dispatched by phx
Mesa Mechanics do theirs and RMFD does their own ... so to answer your question It's an in house job.

I hear Bronco One does some great installs however.

Hope this helps

Mike

Hi John,

BC 141 is a Suburban. I see BC141 driving around occasionally but never really payed attention to the radios. I knew one of the chiefs up here but he has moved onto Black Canyon City but might make it up there later this week then I can let ya know what BC has.

Thanks Mike. I did meet Dave at one of the Scottsdale college
hamfests a couple of years back, and I pick up FAJ off the newsstand
at Border's every other month. I'll have to get ahold of him. I'm
interested in the make/model/year, and what communications capability
they each have. Particularly other than fire/EMSCOM, such as BC 151's
PD radio, which all the Glendale apparatus have, I believe.

Thanks again.

John.

Adam

LOL Adam. I'll have to keep your offer in mind.

Let's see, what are you getting yourself into?:

7 Amateur: Kenwood TS-2000 with an SGC QMS-7 and 3 KB6KQ loops for 6m/2m/70cm SSB (1240 MHz loop for SSB?)
Alinco DR-MO6TH and a Larsen NMO-50BK for 6m FM
Alinco DR-135 and a Larsen NMO-150BK for 2m FM
Alinco DR-235 and a Larsen NMO-220BK for 1.35m FM
Alinco DR-435 and a Larsen NMO-440BK for 70cm FM
Kenwood TM-541 and a unknown antenna for 23cm FM
Unknown dual-bander and unknown antenna for APRS/Packet

1 CB: Midland 79-290 and a 102" whip/6" spring/ball mount

1 MURS: Unknown radio and a Larsen NMO-150BK

1 GMRS: Unknown radio and a Larsen NMO-450BK

1 GPS: Garmin Color Street Pilot and a Garmin GA-26 antenna

1 laptop: Unknown for APRS/Packet, miscellaneous uses

1 Phone: Unknown with handsfree setup and preferably an external antenna

1 Scanner: Uniden Bearcat BC-780XLT and an unknown antenna

So, 10 radios, a scanner, a phone, a GPS reciever, and a laptop. 16 antennas. And this doesn't include the handhelds. Specific models listed may change. I don't want much.....

John

Morning folks... well, as of 1320 yesterday the interference disappeared!... I dont know all of the details, but I do know that calls were made to the TPD Comunications tech's, and now the carrier has disappeared! I happened to be listening to that freq when it happened, the carrier dropped, and then a CW ID was heard, and then all was quite! This tells me that the (a) repeater was reset (i.e. turned off, and turned back on again!). Unfortunately, my ability to copy CW is so poor, that it's better to state that I "no habla CW"!!
Anyone have any connections with TPD Com tech's?... Maybe someone can find out for sure what might have been going on?! If someone does have any contacts, be sure and let them know that the Cochise County Sheriff's Deputy's surely do appreciate them getting the problem squared away!

I was wondering if anyone had any really good places that you can go to watch the airliners coming into skyharbor. Preferably a place that you can get as close as possible without anybody hassiling you, so you can feel the aircraft flying over. If possible good places for both possiblities of runway numbers. Thanks jeremy

Jeremy,

When aircraft are arriving out of the East, go to the city-run viewing area (a parking lot facing the runway) on Air Lane just east of 40th Street. Take 40th St South until it "T's" with Air Lane at the airport fence, then go east. You can park anywhere along the North side of Air Lane (on or off the pavement) for about a 2-block stretch of viewing area. Look for the couple hundred yards of pavement and dirt with trash cans scattered throughout it (so you can bring dinner and dispose of it there!) and that's the spot. Give great viewing of Runway 8/26 and the North side of Terminal-4 (good place to play games listening to the AWA trunked system, like "how many cuss words can I count on the AWA trunked system in 10 seconds").

When aircraft are arriving out of the West, there is a less-known and perhaps less legitimate spot, but it has worked very well and we have never had any hassles. When they extended Runway 8/26, they moved 24th Street a couple blocks west of where it used to be. So now there is a bunch of pavement the runs right along the West end of the South runways that is closed and not used for anything (the old 24th street) but is a great viewing area on the West side. Take the Buckeye Road entrance into Sky Harbor and make a quick left at the first or 2nd light you come to. It'll have a couple "Road Closed" barricades right there at the intersection, but turn right and go around those. You have to go on the wrong side of the road to get down to the end. Sounds strange, but we've had PD and airport ops folks drive by, shine spot lights our way, and never so much as ask us to leave, so I get the impression they really don't care if people sit down there. This spot has good viewing of 25L/7R and 25R/7L.

Subject: [ArizonaScanner] good places to watch aircraft

I was wondering if anyone had any really good places that you can go to watch
the airliners coming into skyharbor. Preferably a place that you can get as
close as possible without anybody hassiling you, so you can feel the aircraft
flying over. If possible good places for both possiblities of runway numbers. Thanks jeremy

1895. Re: good places to watch aircraft

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-25 00:20:23 UTC
From: John H. Guetherman
Topic: 1893 Message: 1895

I used to work for Budget Rent-A-Car about 10 years ago or so. They've got a lot at Mohave St. and 22nd St., northwest corner. (I-10 is along the backside of the lot. Mohave is about halfway between Buckeye Rd. to the north and I-10 to the south.) The employee parking was on the northeast corner, but there was an empty lot along the north side of Mohave between 22nd and 24th Streets. Used to see a lot of planes approaching low for runway 8R on the south side of Mohave. Really neat if it was raining, you could see the wingtip vortices rolling off. Don't know if it's still an empty lot or not, but I do recall seeing folks there on occasion. You could always check it out, at least.

Has anybody gone to the top level of the T-4 parking garage to plane watch? Is it worth paying for? Any hassles? I went early one evening to pick my dad up some time ago, but didn't stay too long up there. Didn't give anyone a chance to say anything to me. 'Course I'd need a trunking scanner to listen to the airport ops stuff first.

John.

Hello all :)

Through one of my LE friends, I have some frequencies, a couple that are new to me, so I thought I'd share this. I don't know what radio this came from, sorry.

1 - Command 1 170.975
2 - Tac 1 168.050
3 - Tac 2 168.200
4 - Tac 3 168.600
5 - Air-to-Ground 169.150
6 - Weather 162.400
7 - Logistics 170.450
9 - State Fire 154.280
10- Saguaro Simplex 166.350
11- Sah. Lemmon Rep. 167.150
12- Sah. Keystone Rep. 167.150
13- ICS Callup 168.350
14- Air Guard 168.625

Cheers,
John

p.s. I can't verify anything since I'm spending most of my life at present in Dallas at the moment.....

1899. NEW Scannerstuff Newsletter issue posted

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-27 04:14:22 UTC
From: Dan Rollman
Topic: 1899 Message: 1899

Hi folks,

Just wanted to let you know, the September, 2001 issue of the Scannerstuff Newsletter is now available for viewing online by Newsletter Subscribers. For information on the Newsletter Subscription Service, please see http://www.scannerstuff.com/newsletter.htm

Please forward this email to anyone you believe may be interested in the Scannerstuff Newsletter online.

Subscribers have access to the August issue as well, and all of the SWFD-6 updates contained in the 60-page "6th Edition Update" booklet (a $15 value in itself!).

The new September issue includes 8 pages packed full of information just for Arizona:
-Updated Mesa Police code list
-Wickenburg Police radio update
-Tempe Police/Arizona Mills Mall Special Enforcement
-New Arizona DPS Criminal Investigations (CI) frequency
-New EMSCOM (Medical) Frequencies State-wide
-Update to Phoenix area SkyWarn frequencies
-Fountain Hills trunked radio system changes
-New Tucson area repeater for LifeNet helicopters
-Republished updated Marana Police frequencies
-New Pascua Pueblo Indian Reservation government frequencies
-New South Tucson fire department repeater channel
+TIPS & TRICKS: Ambulance Dispatches for Incident Locations
+SPECIAL FEATURE: Arizona Department of Corrections

The Newsletter system is password-protected and available to current subscribers. If you recall, this service was created last month after repeated suggestions from many hobbyists and professionals that we create a subscription-based system to share updates and new information on a monthly basis rather than having to wait for new books to be released. Scannerstuff conducted a poll on this list that found additional interest in a Newsletter service. We are currently under a trial basis to test whether there is enough support to continue the system beyond the trial period, 6 months from now. If you're interested in local updated scanner information, tips, and feature articles, I encourage you to try out a 6-month subscription for just $3 a month. Click on http://www.scannerstuff.com/newsletter.htm And if you are a current Newsletter subscriber, please let your friends in the radio and public safety hobby know about the service!

We are currently working on the following for the October issue (all tentative):

--Updated Phoenix Police unit designator
and operations information
--Updated list of Albuquerque Center air
traffic control frequencies and site information
--Updated Yavapai County Sheriff's frequencies
--New exhaustive list of updated City of Tempe
trunking talkgroups, including Police and all town services
--Massive list of Bureau of Land Management Fire &
Law Enforcement operations repeaters, statewide
++TIPS & TRICKS: Tips for using free online database
of FCC license information
++SPECIAL FEATURE: Arizona public safety agencies
on the web
...And more...

As always, we appreciate your updated and corrected information. Scannerstuff puts a considerable amount of time into research and acquisition of information for our publications and especially these monthly newsletters, but information directly from scanner hobbyists and professionals is always appreciated! Please email you corrected and updated information to updates@.... For questions or comments on the Scannerstuff Newsletter service please email newsletter@....

Sincerely,
Dan Rollman
Scannerstuff

From: Michael Hamann
Topic: 1893 Message: 1901

John,

Sitting atop of Terminal 4 or Terminal 3 parking garages is perfectly legal and hassle free. When departing 26 and 25R/L (to the west), Terminal 3 is about the rotation point for the planes. Terminal 4 gives you a good view of the planes taxiing onto the runway. When they are departing 8 and 7R/L, Terminal 3 gives you a vantage point for rotation point on the departures and roll-out for arrivals.

Thanks, Mike. I don't recall off-hand, how high are the walls around the top of the parking garages. Can you sit in your car and see over the wall, or do you have to get out and stand, lean against the wall, or sit on your vehicle? Which would pretty much make a handheld the mandatory radio, unless you can pipe the audio from a mobile radio out of your vehicle on an extension speaker, or a PA system. Not too mention only going up when it isn't over 90 degrees out.

Where can you get a good view of fire station 19, if at all?

John KAZ7FA

1903. Illegal Long-Range Cordless Phones

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-28 09:52:41 UTC
From: John H. Guetherman
Topic: 1903 Message: 1903

I found the orignal post on the scan4good group on Yahoo. As scanner hobbyists, we could make a positive impact for the hobby if we found, identified, and reported any of these cordless phones on airband frequencies. The frequencies mentioned in the below post may not be in use in our local area, so they may not be causing an immediate problem, and may go unnoticed until they do, unless we find them. I would assume we could contact the local FAA office in Scottsdale, if not the Albuquerque ARTCC.

(By the way, the original post was in ALL CAPITOL LETTERS. I edited it down.)

John H. Guetherman
KB7MIB/KAE7927/KAZ7FA/SSB-83T
Peoria, AZ.

Interference Impacting Aeronautical Air Traffic Frequencies Caused By Illegal High Power Cordless Telephones.

Attention International Operators: The Miami air route traffic control center (ZMA ARTCC) has experienced radio frequency interference (RFI) on frequencies 134.2, 134.6 MHZ resulting from the unauthorized use of high power cordless telephones in the Bahamas, and on frequency 133.85 MHZ from the use of high power cordless telephones in Miami.

The Cleveland air route traffic control center ARTCC (ZOB) operations were also impacted due to RFI on frequency 134.65 MHZ, from the unauthorized use of high power cordless telephones located in Harrison, Michigan.

High Power Cordless Telephones are being used illegally in the U.S. and the Bahamas. These phones can interfere with the frequencies used for Air Traffic Control worldwide and can pose problems to ATC navigation and communications. The FAA is working with other goverment agencies within the United States and other countires to curtail illegal use of these phones and is approaching vendors to cease distribution and production of units that operate in or cause interference to critical aeronautical radio spectrum.

Users operating on these frequencies should be aware that navigation and communication could be severly impacted due to RFI of these high power cordless telephones. Users of aeronautical radio navigation and communication services who experience this type of interference should report any event immediately to the air traffic facility providing air traffic services. If this immediate report is unacheivable, the users should make a report to the nearest air

traffic facility at the earliest time possible after the RFI event.

1904. CSPAN to visit NIFC on Labor Day

Yahoo group: ArizonaScanner (1999 — 2002)

John,

Depends on what kind of a car you have :) I'd say maybe an SUV would be able to see over the side of the walls. Anything smaller, grab a PC speaker (if the plug will fit into the scanner) and set it up. Station 19 can be seen from driving alllllllll the way up to the top and facing east. If the bay doors are open you're in luck!! Have fun and if you see any private jets or large unmarked planes, get the "N" Number, the set of numbers near the tail of the plane that start with an N. Write it down and go to www.landings.com and look in the N number registration database. Never know who you'll find! On one trip I went to Sky Harbor and saw a red and white Challenger jet, turned out to be from KFC! Enjoy :)

1907. Re: [ArizonaScanner] Illegal Long-Range Cordless Phones

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-29 00:29:28 UTC
From: August Hoecker
Topic: 1903 Message: 1907

Well actually it is a bit worse than that because the interfering high power telephones (5 watts up up to 50 watts in output power) are most always FM modulation while both UHF and VHF aircraft radio is AM world wide (except for some of Uncle Sam's good stuff) and this usually just produces a steady fuzzy dead carrier sound on the A/C channel! This makes it even more difficult to understand by the flight crew and from 30, 000 feet a 5, 10 or 100 watt erp ground station covers a large circle in the sky! People also tend to chat a long time on these phones to show them off and often because they are beating the system from a cost point of view.

Some of the repeaters used in these "Long Range Cordless Phones" can be programmed over a wide frequency range from about 130 MHz to 170 MHz so you can use a very wide split between the transmitter and the receiver to eliminate the need for sophisticated and expensive tuned cavity filters.

You'll have to get out of your car to see the runways. Some people take their pickups up there and sit in the bay on lawn chairs.

To see sta 19 T3 is the best place (North Side)

John Travolta once had his 707 in for repairs at what is now called
AWS. If I remember correctly, it flies a white 707 with maroon
stipping.

I've also seen his plane parked at Williams Gateway in Mesa.

1910. MED/EMSCOM Channels

Yahoo group: ArizonaScanner (1999 — 2002)

1911. The "Ultimate" Scanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-08-30 10:46:01 UTC
From: John H. Guetherman
Topic: 1911 Message: 1911

Okay, this is what I'm looking for in my idea of an "ultimate"
scanner.

Use the BC-780 as the basis, but with the following additions:

1) Capable of recieving ALL trunking system protocols used by public
safety agencies. Analog or digital. (Not including encryption for
security purposes, of course.) Capable of being 'FLASH' upgraded with
a new protocol as they are developed?

2) More flexible arrangement for the number of memory channels per
bank. I'd like to see being able to assign memory's in groups of 10
to any bank. For example, the way I'd like to set up my scanner is
this:

Bank 1: 10 channels Peoria PD conventional/City trunked, plus Mutual
Aid 155.475/460.375/866.0125
Bank 2: 10 channels Glendale PD/City Trunked
Bank 3: 10 channels West Valley PD's conventional
Bank 4: 40 channels Phoenix FD A-Deck and B-Deck, plus UHF
Bank 5: 30 channels Phoenix PD VHF and UHF
Bank 6: 20 channels DPS by District
Bank 7: 40 channels Other Arizona State agenices (May get further
sub-divided, maybe Comm's Tech's/Capitol PD/Legislative
Security/DOC/Juvenile Corrections in one, Game and Fish and State
Land in another.)
Bank 8: 30 channels Maricopa County-White Tanks/Oatman Mtn./Smith
Peak/Yarnell Hill trunked

180 memory channels so far. Haven't figured out how I'd program the
scanner above that yet. And not all channels in a bank would be
programmed. This is just an idea. I may program the county's trunked
system into more than one bank to seperate the agencies/departments
using it more. Such as Surprise PD/City and Sun City West posse in
one, MCSO analog talkgroups and the Park Police in another, etc.

3) Dual-recievers. Basically, two complete '780's in one case. If I
take a drive over to California, this would make listening to the CHP
and the LA Sheriff easier. Have the base-to-car frequency in reciever
'A', and the car-to-base frequency in reciever 'B'. I believe the New
Mexico highway patrol is the same. Either that, or buy and install
two scanners.

What would you want in a scanner? Yes, I realize that something like
this, especially with the FLASH programming, wouldn't be cheap.

John,
I just wanted to comment on your reference # 3 below:

I lived in the LA area much to long before coming to AZ but only used one scanner in my cars. Program the CHP base frequency into your scanner let's say ch-1 "WITH NO DELAY" and its matching mobile frequency into ch-2 again "WITH NO DELAY". This always worked out just fine for me if the mobiles are within range of course. Btw, CHP is converting its low band system over to a repeater system slowly but one by one the half duplex systems are going away which makes scanner life much better over there.

The LA County Sheriff's UHF system is another story. Their TAC channels are a normal repeater system but as I guess you know their district repeaters post a steady "BUSY" signal on the repeater output when the channel is in use because they use 1/2 duplex operation which is a carryover from their old 34 MHz low band days. This is a problem because your scanner "Hangs" on the base channel until the mobile clears and the busy signal drops.

After fighting this for many years, even using two scanners in my car, one for base and one for mobile I found that receiving the mobile signals direct was usually very poor reception unless they were quite close but it did work to some extent (about 30% of the time). Just pick up a cheap used scanner ($20 -$30) and program in the mobiles and if nothing else it will let you know there is a unit close by if you can hear it!

My issue is with Uniden making scanners flash upgradable. Sure it would be great for us, the scanner enthusiast, but Uniden
then wont be selling their next greatest scanner telling us they corrected all the problems with their last one. They cant make
enough money by flash upgrading.

John,
Also give consideration to a large potential market for high quality, fully programmable scanning receivers that are little more than a plugin card for your computer. Their cost will drop to the point I feel many folks will have more than one scanner card in their system and the software provided and later developed will allow you to do all sorts of tricks.

The transmit and receiver cards now available are greatly overpriced but with volume this is the way to go at home. They will be a bit cumbersome on a Harley however!! (: -)

Ahh, ok. Very good points. I was thinking of the flash programming as a way to cut down on costs for the consumer. Not sure if just flashing an upgrade would be cheaper than an entirely new radio, though. Hence the '?' at the end of that idea. Wouldn't the bugs be able to be worked out as well this way? (I suppose the manufacturer's do have a right to make some profit though. *grin*)

As for the computer plug-ins, I'm not *completely* sold on that idea yet. It would be somewhat cumbersome going mobile, especially in a vehicle where extra room is worth it's space in gold, (even if I do want a laptop for APRS/Packet to start with, but that's in a Suburban). How much resources would a plug-in take? Can a scanner/short wave co-exist with APRS/Packet and run at the same time? (I don't know.) At home, my scanners are in my bedroom, and the computer is out in the living room. It's also shared between myself, my father, and occasionally my sister if they need it. (Both only recently acquired computer/internet access at other locations.) I'm not against the idea, mind you. But it's definately not for everybody. And probably expensive to find out whether or not it's right for *you*. (You in the general sense.) Especially if your radio purchases are few and far between due to financial concerns. The trunking systems like Trunker, et al, appear interesting, though.

John H. Guetherman.

From: John H. Guetherman
Topic: 1911 Message: 1916

Yep, the CHP is slowly going to 39MHz repeaters. It'll be nice to be able to hear both sides of a conversation one one frequency. And the Sheriff's dispatchers can go into a normal repeater mode, but I don't know how frequently they'll actually do that. Probably not very. (I haven't gotten over there since '96, but I do have friends there, and would like to go back to visit again.)

Having two recievers would be helpful in another situation, too. When there are 2 or more channels being used at an incident. You'll miss fewer transmission's if you only have one radio to listen to, but it has a dual-reciever. I might be listening to Peoria PD and FD, or to both fire channels 3 and 6 if they're landing a helo, or staging on a multi-alarm incident, etc. If there's multiple agencies working an incident, I've actually had both my base scanners, my handheld scanner, and a dual-band amateur ht monitoring 4 or 5 channels at once. This would be my typical use of a dual-reciever scanner.

Chad,

UAPD has 4 primary channels that they use. Off the top of my head, Ch1 is primary for patrol, on 460.350 receive, with a 100.0 PL tone. Ch2 and Ch3 are also repeaters and are used for car to car and for events (like basketball and football game days), and Ch4 is the repeater at the Mount Graham observatory in Safford. I don't have my SWFD book handy with me now or I'd give you the others, but they are all available in the Southwest Frequency Directory 6th Edition for Arizona (www.scannerstuff.com), as well as the other UofA frequencies (quite a few of them!) like CCIT, Athletics, Event Management, Facilities Maintenance, KUAT Operations, McKale Center Ops, Parking & Transportation Dept., Student Rec Center ops, Student Union management, and much more. I see you are a business student there at UofA, so you may be interested in some of those other departments as well. As such, I won't hesitate to give a shameless plug and recommend you order a copy of the Southwest Frequency Directory from www.scannerstuff.com.

Feel free to email me directly at danrollman@... if you want
more info on the book, or have any questions about UofA radio operations. I am somewhat familiar with them as "my scanners and I" were students there at one time.

Dan,

Yes, it's becoming quite a list of them these days. 15 now. The original 1-10 are on Page 26 of the 6th Edition of Southwest Frequency Directory (http://www.scannerstuff.com/SWFD.htm).

The new 11-15 are...

Med 11: 453.025
Med 12: 453.075
Med 13: 453.125
Med 14: 453.175
Med 15: 460.525

There is additional discussion on these new frequencies in the current September issue of the Scannerstuff Newsletter (http://www.scannerstuff.com/newsletter.htm)

From socalscan, again:

http://www.c-span.org/wildfires/

(Remember, 6pm Pacific Time....same as Monday Night Football)

Monday, September 3rd
Beginning at 9pm ET on C-SPAN
On the evening of Labor Day, C-SPAN will provide viewers with an inside look at the nation's logistical support center for wildland firefighting and how a wildfire is contained.

We'll tour the National Interagency Fire Center (NIFC) in Boise, Idaho and take our camera along the fireline of the Green Knoll Fire near Jackson, Wyoming.

The program includes tours of the firefighting equipment and technology employed by the seven Federal agencies that oversee wildland fire operations at NIFC. We'll also talk with some of the firefighters at the Green Knoll Fire, see how they contained this 4,470 acre fire, and tour fire camp.

Programming Schedule:
Beginning at 9pm ET on C-SPAN
Monday, September 3, 2001

9pm

Introduction to the program
Tour of the National Interagency Coordination Center
Viewer Phone Calls

10pm

Great Basin Cache tour
Brief interviews with members of the Centennial Crew

11pm

Viewer Phone Calls
Interview with Joe Carvelho, Great Basin National Incident Management Team, Incident Commander
Tour of infrared technology and planes

12am

Fire camp tour
Interview about firefighting gear and the role of women in wildfire

Interview about using fire to fight fire
Interview with an engine crew leader
Interview with a Sho Ban crew member about fear and dangers of the job

John H. Guetherman
Peoria

1922. Re: [ArizonaScanner] The "Ultimate" Scanner

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-01 12:58:12 UTC
From: Roy Schahrer
Topic: 1911 Message: 1922

The modification that I would make to the 780 to make it more of an `Ultimate" scanner would be the creation of a seperate memory section just for trunked systems. Not sure how many I would let someone put in, but as cheep as memory is I would think there should be a lot.

My idea is to keep the Trunk frequency info seperate from regular scanner memory channels. The one thing I hate about the way the 245 & 780 work is how they tackle trunked systems now. I hate the idea that I can't just press SCAN and have the scanner resume scanning on a trunked system. As it is now if you are on a trunked system and you hit scan it loops right back to the same talkgroup most times. My idea would be to keep the trunked systems seperate in say System1 System2 System3 and so on. Lets say you wanted to set up a bank in the 780 with just the `HOT' channels. Here is an example:

Ch1 Phoenix PD Chase1 453.100 (conventional)
Ch2 Phoenix PD Chase3 453.450 (conventional)
Ch3 Scottsdale PD 1-Bravo `HOT' System1 Talkgroup 80
Ch4 Glendale PD Ch `D' Car to Car System2 Talkgroup 300-4
Ch5 Tempe PD Ch `J' SAU System3 Talkgroup 33904
Ch6 Chandler PD `Hot' System4 Talkgroup 16720
Ch7 Gilbert PD Ch3 Tac System4 Talkgroup 18256
Ch8 MesaPD Ch5 `Hot' 155.130 (conventional)

True, the 780 would have to aquire the control channel for each of the trunked systems as it scanned them but the 780 does that pretty quick if the control channel hasen't changed since the last time it was tuned. In other words the regular memory we are used to now would be able to be set to a conventional frequency or to a trunked system/talkgroup. It would be helpfull if the scanner had the logic to look at the layout of the scanner and to keep on the same control channel if it detected that it was already on it when it moved from channel to channel such as the example in going from ch7 to ch8 since Gilbert and Chandler are on the same physical system. In a regular layout most people also group a department together in memory as well and the scanner should not have to reaquire the control channel in that situation.

I guess the only drawback to that would be the loss of the trunked scan list as it is set today, but there are advantages to this way in making it somewhat less confusing to set up I think.

Then again I guess everyone has their own idea of what works and what dosen't. :)

Roy

Roy,

Also keep in mind, as Dan Danz filled us in on last Saturday at the get-together, if you hit "Limit" (down arrow) instead of "Scan", the scanner immediately scans on to the next bank (forcing it to move from the trunked system it is "locked" on because of a very active talkgroup) with a single button-push.

Dan

I do like your idea of channel set-up a lot and personally would prefer it. Once consideration though, is areas that are highly reliant on trunked systems. We like your idea because we can mix and match trunked and conventional frequencies more easily, but many big cities (Atlanta, San Diego, Denver) have nearly NO major conventional radio systems still in operation (no need for replies with "exceptions", yes, I know there are some small conventional systems in those cities). In these places, the current design may be preferable because of the increased number of banks. If you live in a city that is nearly entirely trunked for fire, police, and everything else, then you essentially have 100 "banks" at your disposal, not 10 as we think of.

Of course a true "Ultimate" scanner would have several "template" designs that you could reset the scanner and "chose a layout", where the current style of channel management would be one, your suggestion would be another, etc. Right now, "screen mask" is as far as Uniden has come at changing "layouts" of the screen/operation, and that's not much. :) You're right in that the price of memory for these things has dropped dramatically, so it will be interesting to see if any of the makers capitalize on that with more advanced memory designs, even those that may require significantly more memory to accomplish.

Dan

John Travolta once had his 707 in for repairs at what is now called
AWS. If I remember correctly, it flies a white 707 with maroon
stipping.

I've also seen his plane parked at Williams Gateway in Mesa.

1926. RE: [ArizonaScanner] KTVK Air to ground

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-03 03:26:27 UTC
From: Dan Rollman
Topic: 1924 Message: 1926

Tim,

That is correct, 161.730. And it has a 127.3 PL. The helo, ENG, and the Desk often refer to this channel as "Channel 4". (The others being the UHF frequencies).

The chopper does sometimes communicate with the news desk or ground personnel on Ch1 (450.1875). This is rare, but Bruce has occasionally done it when I've been up riding with him. Ch4 (161.730) is definitely more prominently used by the helo, though.

Can anyone confirm if 161.730 is the air to ground frequency for News Chopper 3?

Thanks,

-Tim

~~~~~~

Okay,

450.1875/DPL ? = Ch. 1
450.3500/DPL 261 = Ch. 2?
? /DPL ? = Ch. 3
161.7300/PL 127.3 = Ch. 4

Where are the UHF repeaters located?

1929. ATC Freqs wanted...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-04 16:31:57 UTC
From: John LaBua
Topic: 1929 Message: 1929

I've also posted this message on the AirCommSouthwest group, but thought that maybe someone here could possibly help out also.

I know that I could eventually find out what I want given enough time, but I'm trying to save a little here.

I'm looking for the freqs to listen to in order to track a flight that is coming into Sky Harbor Intl. later this evening. I've got the ones from Sky Harbor Approach to ground control but am looking for the ones that would be used to communicate with Albuquerque Center on the way in. Looking at the route map for America West, the flight may use Denver
Center in addition or in lieu Albuquerque Center.

I probably have most (if not all) already in the scanner but I'm hoping for a kinda "heads up" as to the most likely ones that would be used.

Thanks to any and all who care to lend a hand with this. You may reply here or direct via email.

John

Hey!

Monitor 128.450 and 135.725 for Albuquerque Center. If they're coming from the south, listen on 125.30. Thats about all you'll be able to get from the Phoenix Sky Harbor parking garage, Denver Center is probably too far off :)

Regards,

Mike Hamann

1931. Aircraft in distress 121.500 No. AZ

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-05 03:00:38 UTC
From: Temp Berdan
Topic: 1931 Message: 1931

At 7:50 PM AZ/PDT several airliners started to call "aircraft in distress/aircraft running out of fuel".
No answer.
Then airliners started asking aircraft in distress to squawk 7700 (per (ABQ??) center instructions) so they could see them.
Then several other airliners started to call aircraft in distress.

No answer so far.

Check it out from your Qth.

Plane is Cessna 182G ID:, N3250S... Probably used for light cargo, like bank transfers.

CP is near Mayer (Maher?) AZ a berg in the middle of nowhere.
Approx. 20 miles E. Cottonwood, AZ .
Ranger 1 crew having to load up combative pilot.

Good guess is that he will go to Verde Valley Medical Center, in Cottonwood, a very good hospital (I just paid a guy mucho dinero to cut my throat there. Fortunately he was wearing scrubs.

Patient now being transported to FMC (Flagstaff). Must have better trauma/burn unit there.

Patient too combative to go via chopper. Now on way to VVMC via meat wagon.

I could hear him in background, and he is a tough guy and very vocal!!

IMHO, he probably assumed that a ground crew fueled plane.... And didn't check fuel himself.

Not good.

Sack time.

Out.

Roy Schahrer [n7qyk@...] writes:

I hate the idea that I can't just press SCAN and have the scanner resume scanning on a trunked system. As it is now if you are on a trunked system and you hit scan it loops right back to the same talkgroup most times.

--

There's a little-noticed feature of the 780 that I pointed out to the bunch the last time we were at Fuddrucker's ... I guess you missed it.

Pressing the LIMIT key will cause the scanner to resume normal scanning, starting at the NEXT BANK. (Bummer: it bypasses any conventional frequencies in the trunking back).
(Bummer Number 2: it only works when the scanner stops on a TRUNKING system. If you're on a conventional system, you have to press SCAN to bypass it).

But it does prove handy when Scottsdale PD guys are chit-chatting on 1E and you want to temporarily bypass them.

Date: 2001-09-07 05:07:13 UTC
From: Dan Rollman
Topic: 1904 Message: 1936

I did not tape it, but did see much of the program. From a purely radio perspective, it was not real in depth. But to one (like myself) also interested in the politics of the job the NIFC does, the nature of wildland firefighting, and an overview of IMS (Incident Management System) it was well done and interestingly varied.

It is not unlikely CSPAN to replay extended productions like this one, so check their website on occassion and you may find an announcement for it coming up again in the future.

Dan

They aired the program twice, back-to-back. I only got to see the last 20-30 minutes of the second showing. Keep an eye on their program listings to see if it get's repeated anytime soon. Since I've only got a 28k8 connection (at best), watching it online wouldn't be very fun.

1941. RE: [ArizonaScanner] Ranger & USA-1

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-07 18:53:19 UTC
From: Dan Rollman
Topic: 1904 Message: 1941

Dan Contreras,

Ranger has the ability to transmit on just about any frequency he wants to. Page 26 of the 400-page 6th Edition Southwest Frequency Directory (http://www.scannerstuff.com/SWFD.htm) shows the input to EMSCOM (Med5) is 468.100, so you may hear him better there if you are not hearing the output (463.100). In Phoenix, Ranger also generally gives status reports to Phoenix Fire on 154.190 (Fire1) when they go out of service. i.e. "Phoenix Ranger to alarm, out of service on a law enforcement mission to Wickenburg." On SWFD-6 Page 100, Ranger is listen as one of the fire units based at Phoenix Fire Station #41. Because they're based there and can be dispatched by PhxFD they update them as well. Ranger also often communicates with DPS on the Metro highway patrol frequencies also, as well as any other district they may fly to.

On Page-71 of SWFD6, at the top of the intro to the Maricopa County section, USA-1 is listed as 866.0125.

Hope that answers everything.

1943. Scanner Humor

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-09 03:30:10 UTC
From: John H. Guetherman
Topic: 1943 Message: 1943

I actually fit some of these.-John

You Might Be a ScannerHead if.....

...there's a car accident outside your house, and instead of rushing outside to offer assistance, you rush into the radio room to hear it being dispatched on the scanner.

...you know what fire station is being dispatched by listening to the pager tones.

...you start reading plates by the police phonetics.

...you quickly translate a vanity plate read in phonetics.

...you have a 'favorite' dispatcher.

...you curse the newspaper for not printing anything about what you heard last night.

...you know at least 15 vehicle/penal code sections.

...you yell at TV shows that use scanners in place of 2-way radios. (hello 'Starskey & Hutch'?)

...you promise to sell your old scanner when you upgrade, do you find a convenient use for it SOMEWHERE?

...you can rattle off at least 10 local PD/Fire freqs by memory.

...you put off everything on Saturday night to see "COPS".

...you have twin spotlights on your car.

...you know exactly when you are leaving one 'beat' (or first due area) and entering another.

...you ever forgot to answer your telephone because you thought it's the scanner picking up on another phone call.

...you answer the scanner when the officer/fire/medic crew asks for the numerics on their call.

...you run out of room on your belt to carry your handhelds at the hamfest/airshow/event.

...you frequently chat with the little old ladies at the beauty shop to try to confirm gossip you hear from people's cordless phones.

...you've got more antennas on your car than the Command Post Van.

...Officers ask you to program their new trunk tracker.

1945. Yuma, Az. LTR system

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-09 19:14:41 UTC
From: openhighways@aol.com
Topic: 1945 Message: 1945

Right to the point. Is Yuma's LTR system, which is listed in SWFG as a E.F. Johnson Multinet the same breed as cat as the one currently in use by Pima Co.? I understand, maybe incorrectly, that LTR freqs must be in some kind of logical order much like an EDACS system. But after playing around with the order of the freqs, all I was able to accomplish was to receive one LTR code and no audio, much like happens when I attempted to monitor Pima Co's system. Which leads me to belive that it is the same breed of utterly frustrating cat.

Mark,

Everything I've heard from contacts in Yuma is that it is in fact a MultiNet II system, which is what Pima County has. Tough luck for us! Those systems are rare, and we have two in AZ! Go figure...

1947. SFO on 128.90 Heard in Tucson, AZ

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-10 15:03:34 UTC
From: FLANO
Topic: 1947 Message: 1947

As I sit here scanning the local folks, Tucson International and Davis-Monthan AFB, I'm also enjoying San Francisco talking to United flights. It's probably skip but it's nice to hear out of area. I'm only hearing SFO and not the aircraft. The frequency is 128.90mhz.

Having said that, I leave for Dallas again and will enjoy DFW and the area.....

Enjoy,
John

1948. Re: [ArizonaScanner] SFO on 128.90 Heard in Tucson, AZ

John
I listen to the airline company channels all the time and hear this channel a lot. Mostly though, I hear
"Aircraft calling San Fransisco please stand by" then never hear the finish of any conversation. I don't think it's skip
because I hear this channel to often and never other channels from any great distance. From home about 20 miles NW of Tucson
International, I can't even get the base stations for the local aircraft. I get mostly America West, Southwest, Alaska, Delta
and FEDEX in a 120 mile radius. I never hear United or American. If you have any information about other aircraft, I would
like to hear it. If there is anything I can give you, let me know.

I suspect what you are hearing is one of the ARINC frequencies. They have a bunch up on Mount Lemmon. I was listening to them a couple of weeks ago and heard similar traffic, not sure which one it was on right now. (Actually I was checking out an evaluation copy of TrunkStar 780 and its ability to log traffic) Anyway, I heard traffic like "United xxx San Francisco Radio...your primary will be 8849 and your secondary will be 4423.....(actual HF freqs are bogus because I don't remember them)" This tallys with the range of HF flight following frequencies used by San Francisco. I've monitored them and heard the position reports that are required every 10 degrees, and occasional traffic regarding gate assignments and maintenance requirements.

Hope this helps

Jim

1950. RE: [ArizonaScanner] SFO on 128.90 Heard in Tucson, AZ

Topic: 1947 Message: 1950

John :)

I've heard San Franciso say the stand-by transmission as well as, who's calling and identifying the aircraft that he/she's talking to as United and American.

I've heard numerous references this morning to put in a primary frequency of 8843 and a secondary in the 5XXX range.
Probably HF frequencies.

Callsigns heard: United-45, American-5, San Francisco (aka "Sam" several times)

As I type: SFO asked a United flight if his cell phone number is QREFX. He is advising that the operator is on the cell phone. He asked if the United gets his HF check on REFX. States "We just sent it 3 times."

SFO to United-45: "I've got SATCOM systems and SATCOM-Hi...Stand-by one."

"Go with SATCOM, HF is not working. Stand-by one...Golf-02 and Golf-05 on your overhead panel, go ahead."

"Looking at the "MEO", have to bring dispatch on to see how they feel about that."

"We will have to HF working, at least one, that's our primary communication. Work it out, do what you can.
Go back to the gate and possibly recycle the (unknown word) and the equipment. I'll leave maintenance a head's up.
Sam clear." "And dispatch is clear."

"Gate 3, I have you loud and clear."

One other note, I am hearing all of this on my PRO-91 and the stock Rubber Ducky, LOUD and CLEAR. I'm actually in Vail, so I'm to the SE of Tucson. I programmed in some of the other freqs for SFO and haven't heard a word.

Sorry to say, but I gotta get some errands done before I catch my American flight back to DFW for a couple of days.
So, that's all I'll be able to tell you for the moment. Hope this helps.

Thanks,
John

Jim,

Thanks for the information. This syncs up with what I'm hearing. I actually heard the SFO guy do a phone patch from a pilot to his wife and the wife asked if he was the "FAA Center" to which the controller replied yes.

On my errands in the city, I was up in the Swan/Fort Lowell area and I was able to copy the full converstation between a pilot and SFO. As soon as I left the area, it was back to only hearing one side....SFO.

Just interesting to me, since I hadn't heard this one before, and I try to search for new or seldom used air freqs pretty regularly.

Now I think I'll fire up the HF and see what I hear on these primary and secondary frequencies :)

John

p.s. If you happen to come across any other ARINC frequencies, I'd be interested in hearing about them. Thanks.

1952. Aircraft TRaffic over Arizona September 11 8:45-9PM

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-12 04:01:15 UTC
From: Brian Daly
Topic: 1952 Message: 1952

For there being a grounding of aircraft nationwide, there is quite a bit of high altitude aircraft traffic in the skies over Arizona (I am in N Scottsdale). I counted 2 formations of 2 planes traveling SSE and 2 aircraft flying almost due S within 15 minutes. I assume they are military.

Anyone monitoring the Center frequencies or the military aircraft frequencies? Anything interesting going on?

Sorry, I don't but if someone has them please post! Also, anyone have any Federal Government frequencies, such as the FBI?

Seems like at least one pair of fighters are circling the skies over the valley. I have also heard Sky Harbor tower and PHX departure with 2 ANG refuleing aircraft -- one landed, one took off.

Subject: RE: [dfwscan] MilAir Activity in North Texas ???

A SPAD flight of F-16's (I believe 2) was up on a Combat Air Patrol around the Metroplex. An AWACS was also somewhere in the area "CHALICE", and BIGFOOT (which I think is a NORAD callsign?) was in communication with the aircraft as well. The SPAD's were getting target information on 252.1 from the AWACS aircraft and yes there were some radar contacts that were investigated. A Cessna and a helicopter that I assumed were found and forced to the ground. 282.2 I believe was also being used as were the VHF Air-Air freqs. for the SPAD's. I'm continuing to monitor now with no activity. The SPAD's RTB'd around 7:00 PM and mentioned something about "if we get scrambled up tonight" so I think the CAP's may be over for our area for now.

I can say that I heard the aircraft, not the comms. Around 630pm I heard what sounded like "2" fighter jets south of me. Which would out them someplace over Watagua, NRH, flying from the West to East.

Anyone else see/hear them?

David

From: John H. Guetherman
Topic: 1952 Message: 1957

From various posts on socalscan:

134.550
148.125 Seems to be the primary in the Los Angeles area
235.900 NORAD
252.000 NORAD
265.400
277.400 Los Angeles Center
303.000 Aerial Refueling

All in the AM mode, including 148.125. Aircraft included F-15's and F-16's, E-2C AWACs, and refueling tankers. International aircraft from Mexico and Asia were being escorted up the coast to Canada.

I saw one news shot of a Phoenix police Firebird helo up, and the special edition of the Arizona Republic stated that the medical helo's were grounded. Saw the news story of a DPS KingAir twin-engine prop that went down to Yuma, after clearing it with both the FAA and the Yuma MCAS, to pick up two Phoenix FD TRT/USAR captains who happened to be in San Diego teaching. They got Caltrans(?) to give them a ride to Yuma, where DPS picked them up and flew them back to Phoenix. I would have figured that *any* law enforcement, firefighting, and medical aircraft would be allowed to fly. What about the forest fires here in the western U.S.? Were the helo's, tankers, etc. fighting them grounded too?

> Is that AM or FM?

Oops. It's AM. I guess I just figured that since the thread was military in nature, AM would be assumed.

Also I just heard a flight from that frequency told to check in with Archibald on 148.125. I didn't get it programmed in to the
scanner in time to hear if Archibald was audible, only the flight acknowledge them and they then returned to the above
frequency.

I have the following frequencies in the scanner along with what I was told they were for. I keep hearing that a tanker is up and available for use but I can't seem to find the freq they are using. Can anyone help out with this info? Also, feel free to make any other corrections or additions to the following list!

1968. Air Traffic -Active Freqs

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-13 03:01:49 UTC
From: Jeff
Topic: 1968 Message: 1968

I'm up here near New River and last night saw one of the F16's traveling north turn around over Anthem and went back south. The next several passes that I watched they went up around Black Canyon City before turning south. I also observed another F16 flying an east/west pattern that seemed to north border Cave Creek/Carefree.

Tonight I am listening to the Air band on a BC245 and picked up two freqs, 125.25 and 128.45. It sounded like the same pilot on both channels, the first was a ref. to "Ross" and id'd himself as "Fueler" then a little bit later 19:45 he called to someone else that they were to maintain 2550 for air refuel. Moments later another voice said something like Albuquerque Center Contact, Angel 2. The Fueler was going to Tactical Chan 86.?...

Anyways hope this gives someone else something interesting to listen to.

Our hearts go out to the victims and family's of yesterdays tragedy.

Thanks for the great report Jeff. I have been hearing activity in the 131. range. Pretty much the same as you reported - it was at about 20:15 this evening. I'm using a BC780XLT on a Cushcraft AR270. Unfortunately, I'm in an apartment on the first floor so I'm probably hearing only a small part of the transmissions. I'm in Chandler. My friend lives a few blocks away - he said he saw two F-16's to the North flying in formation. I can't believe this is happening.

-PS Do you think it would be better if I broke the Diamond Discone out of storage and put it up inside the apartment?

Take care everybody.

-Tim

Tim, my 780's in the vehicle and I'm to lazy to got disconnect it :) I'm just using my BC245 and an ICOM R3 (for the Mil. Band), I have a Pryme 2m/70cm/800Mhz Rubber Flex antenna on both radios and they seem to be doing fine, I'm downstairs in a two story and am receiving fine, I can't always here both sides but I don't know that an external would help that anyways, Planes are high up and have line of sight to the other party so who knows. I don't think your Discone will make that much difference. If it's handy try it. My disc is down in phoenix, alot of good it does me now!

I see the posts about the Mil band being active but I haven't heard any voices yet.

I'm with you, this is pretty unbelievable... I can't say it came as a complete shock to me, I figured someday something would happen, the when and where and how remained to be seen until yesterday. Things will never be the same. Hopefully someday we can all have some security without life being the way Hollywood depicts it in the movies (ie Marshall Law, Executive Orders, etc...)

Jeff

Jeff,

I'm hearing nearly non-stop chatter on the frequencies mentioned, as well as some others I have programmed, so there is voice activity quite active tonight on the mil freqs.

Back in June Wayne Cummings posted a great compilation of mil-air frequencies, many of them active tonight. I repost below.

Dan

Confirmed list of SE Arizona Air Refueling frequencies:

120.5500 AR-647 MRU Pri
238.9000 AR-603 Pri
254.5000 AR-647H MRU
264.7000 AR-647L/M MRU
283.9000 AR-647L/H Pri
286.2000 AR-603 O'Grady Sec / AR-658H Pri
291.9000 AR-639 / 639A Pri
295.4000 AR-647M Pri
305.5000 AR-613 Pri
318.0000 AR-658L Sec
319.5000 Secondary AR603,AR613,AR639,AR639A,AR647L/M/H
321.2000 AR-603 O'Grady Pri
347.2000 AR-658H Pri B/U
384.6000 AR-658H Sec
391.8000 AR-658L Pri

MRU = Military Radar Unit
All frequencies are AM unless specified...

Confirmed list of air traffic control frequencies for Davis Monthan:

118.8500 DM - Tower
121.8000 DM - Ground
239.8000 DM - Metro
253.5000 DM - Tower
270.1000 DM - ATIS
275.8000 DM - Ground
359.3000 DM - Emergency SFA
372.2000 DM - Pilot to Dispatcher
381.3000 DM - Command Post - Raymond 8

SFA = Single Frequency Approach
All frequencies AM unless specified...

Confirmed list of TRACON (RAPCON) frequencies for TIA/DM:

Subject: [ArizonaScanner] Re: Air Traffic -Active Freqs

Tim, my 780's in the vehicle and I'm to lazy to got disconnect it :)
I'm just using my BC245 and an ICOM R3 (for the Mil. Band), I have a
Pryme 2m/70cm/800Mhz Rubber Flex antenna on both radios and they seem
to be doing fine, I'm downstairs in a two story and am receiving
fine, I can't always here both sides but I don't know that an
external would help that anyways, Planes are high up and have line of
sight to the other party so who knows. I don't think your Discone
will make that much difference. If it's handy try it. My disc is
down in phoenix, alot of good it does me now!

I see the posts about the Mil band being active but I haven't heard
any voices yet.

I'm with you, this is pretty unbelievable... I can't say it came as
a complete shock to me, I figured someday something would happen, the
when and where and how remained to be seen until yesterday. Things
will never be the same. Hopefully someday we can all have some
security without life being the way Hollywood depicts it in the
movies (ie Marshall Law, Executive Orders, etc...)

Dan, thanks, I'm getting alot of traffic now, I broke out the computer prog cable for the Icom R3 and put in all the freqs you and the others have posted today and now I can hear them in scan mode. I guess searching the whole air band wasn't working too well since they are just very short comms, lots of them but short just the same.

Scanning "Known" freqs is working.. thanks again...

I just heard someone requesting word for their "replacements", no word yet though...

1978. Re: Air Traffic -Active Freqs

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-13 07:13:37 UTC
From: John H. Guetherman
Topic: 1968 Message: 1978

From the phlscanner (Philadelphia) list:

138.425, 303.0, 282.6, 225.8, 138.125, 138.325, 271.1,
256.8, 225.8, 125.650, 319.150, 254.7, 254.2, 228.9,
257.2, 319.4, 261.9, 234.8, 236.0, 320.6

Are the medical helo's back up yet? I work 2nd shift and sleep during the day, so I have no way of knowing unless I hear them in the next few hours before going to bed. Any particular freq's good for over-night listening to the CAP's over Phoenix? Any on-air activity from Ranger, Fox, Firebird, Falcon? Customs, Border Patrol, etc?

Medical Helicopters have been up since 11am yesterday morning.
We have to file a flight plan with TRACOM prior to lifting, and jump through
a few other hoops but yes we are all up and flying.

This can be tough since it is a business. The company I work for is called Vulcan, but is licensed under the original owners
name of Calmat. Also, if there is a parent company, it may be listed under it.

If you still are interested in trying, then search at the link below using the option of Licensee/State. I tried using
"thunderbird" and "az" and got this:

THUNDERBIRD SAMARITAN MEDICAL CENTER DBA SAMARITAN HEALTH SYSTEM
THUNDERBIRD AMATEUR RADIO CLUB
THUNDERBIRD SAMARITAN HOSPITAL
THUNDERBIRD LODGE
THUNDERBIRD SAMARITAN HOSPITAL
THUNDERBIRD LODGE
Thunderbird Country Club

You may have to try using the school name or parts thereof. Also, search the ULS Database. It contains MOST of the records for
business and public service licenses. You might have to resort to the "brute force" method and just find a place close by and
search the bands you think might be in use. ;-)

The link to use is:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

Thanks for posting that, John, and I'm confident we can certainly accept and appreciate the off topic post in this instance. There's a great picture of a flag in that album that enlarges to full page size wonderfully and prints well. If anyone was unable to get a flag for their vehicle before they sold out, and would like one, do like I and others have done: Print one out and put it in the corner of your rear-side or rear window. John's webshot album has one that works great for that (appears waving in the wind).

Dan

Here's a link to the New York DX Association website. Although we are too far away to hear any of the VHF-UHF frequencies, (unless the 2 or 3 Low Band channels skip out here), there are HF frequencies in use, and the page also has links to pages with online New York City scanners that we can listen to.

****
Flag

I AM THE FLAG OF THE UNITED STATES OF AMERICA My name is Old Glory. I used to fly atop the world's tallest buildings but for today.

Today, I fly at half-mast in honor of those Americans who were taken today. I will continue to stand watch in America's halls of justice. I will continue to fly majestically over institutions of learning. I will continue to stand guard with the power of united strength. Look up and you will still see me. Those who attack our shores, Cannot make me fall.

I stand for peace, honor, truth and justice. I stand for freedom. I am confident. I am proud.

When I am flown with my fellow banners, my head is a little higher, my colors a little truer. I bow to no one! I am recognized all over the world. I am saluted. I am loved - I am revered. I am respected - and I am feared.

I have fought in every battle of every war for more then 200 years. I was flown at Valley Forge, Gettysburg, Shiloh and Appomattox. I was there at San Juan Hill, the trenches of France, in the Argonne Forest, Anzio, Rome and the beaches of Normandy, Guam. Okinawa, Korea and KheSan, Saigon, Vietnam know me, I was there. I led my troops, I was dirty, battle worn and tired, but my soldiers cheered me And I was proud.

I have been burned, torn and trampled on the streets of countries I have helped set free. It does not hurt, for I am invincible. I have been soiled upon, burned, torn and trampled on the streets of my country by those who would tear me asunder. But I shall overcome - for I am strong.

I have slipped the bonds of Earth and stood watch over the uncharted frontiers of space from my vantage point on the moon. I have borne silent witness to all of America's finest hours.

But my finest hours are yet to come.

When I am torn into strips and used as bandages for my wounded comrades on the battlefield, or when I lie in the trembling arms of a grieving parent at the grave of their fallen son or daughter,
I am proud.

MY NAME IS OLD GLORY but my strength is in the American heart. LONG MAY I WAVE.

DEAR GOD IN HEAVEN LONG MAY I WAVE

I ask that you remember our country and those who have died in your prayers. I also encourage you to resume a normal life as soon as possible, for it is then can we start to heal.

http://www.kvoa.com/stories/9162001_0.html

Flew out of La Cholla Airpark. Plane hadn't been flown in 5 years, was last fueled in July, and was not authorized to fly, per the story.

What you'd expect to happen when you fly a plane 5 years after its last flight, without inspecting its condition or testing fuel quality, and with a national guard helo enroute to bust you, happened. Basically.

Not to mention VFR private flights are still not allowed (only IFR, with flight plan filed), so Tucson Tower sent a National Guard helo to go figure out what the moron was doing after he failed to answer radio calls. Don't know how far the National Guard helo got up to the north side of town to put the pilot in his place, before he crashed.

http://www.tucsoncitizen.com/local/9_16_01plane_crash.html and the Tucson Citizen website front page also have some info, including a picture of the house it hit well involved with fire, as Northwest Fire Rescue firefighters found it on arrival. The pilot is dead.

Michael,

Sorry, I wasn't sure if my post got out, it took so long to get feedback on it :)

Well, I never heard anything more on the scanner. The news states it was a single pilot that took off from one the airfields to the north of Tucson. Unfortunately, he crashed into a house and did not survive.

According to the news, it was quickly deemed an isolated incident.

Sorry for the late reply,
John

From the KVOA (Tucson's NBC Affiliate) web site:

"UPDATE: Plane Goes Down in Tucson

The cause of the small plane that crashed into a house on the city's Northwest side has been determined. Authorities say the plane was last refueled in July and had not been flown for five years.

The private plane, which apparently flew without authorization, crashed about 8 a.m. into the carport of a home near Ina & La Cholla, just a few miles south of the Foothills Mall.

An FBI spokesperson said that they considered the crash "in no way connected with the terrorist attack on our nation's Capitol or in New York on Tuesday."

The woman in the home was able to get out safetly. The pilot of the plane did not survive. "

Department of Transportation
Federal Aviation Administration
Promotional and Career Opportunities
Vacancy Announcement Number: FAA-ACS-01-FAM-59569

http://jobforms.faa.gov/civil_aviation_security.htm

I heard on KJZZ 91.5 FM Thursday that the airline pilots want this taken away from the FAA, and given to a law enforcement agency.

If they won't accept the FAM's as being under the FAA, then the FAM's should be moved either under the FBI, or made into an entirely new bureau or service under the Department of Justice, or maybe the Commerce Department, but that's just my opinion.

I recall reading elsewhere, that the FAM's of the 60's and 70's were mainly Custom's agents.

You just haven't been listening to the right news channel on your "Boob Tube"! This subject has been talked about many, many times this past week along with new flight deck doors, no flight deck keys for the flight attendants, pepper spray, stun guns and other non lethal weapons. A great deal of discussion with reference to modeling the security systems Israel Airlines are using with great success. Also consider this please. While we (we Americans) are all up tight with airline safety and security (and we should be) we should be paying much more attention to "Home Land Security" and what's coming next that may make NYC look like a minor incident!!! This is way off topic so we should continue this elsewhere but "LET'S NOT GET SO HUNG UP ON OUR HANG UP WE DON'T DO OUR THING"!! This whole airline safety issue is of course very important but it could be a "PLANNED DIVERSION" to keep us looking the wrong way!! Just a few thoughts for thought. August ========== T. Weaver wrote: > Funny...the commercial pilots I know, including one union representative, > want to arm the pilots as well. 2007. Free Scanner frequency update booklet

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-21 18:18:52 UTC
From: Dan Rollman
Topic: 2007 Message: 2007

Hi Folks,

Just wanted to let you all know, I am currently offering a special on purchases of the Southwest Frequency Directory 6th Edition from www.scannerstuff.com.

Purchases of SWFD 6th Edition Book OR CD-ROM ($30 each) will be shipped with a free copy of the Phoenix Metro Guide/SWFD6 Update Book ($15 value). The SWFD-6 book is over 400 pages of detailed scanner information including frequencies, radio codes, unit designators, fire station locations and apparatus, TrunkTracker talkgroups, beat maps, tips and hints, and much much more! The book includes over 200 detailed pages for Arizona alone!

Or, Even better... Purchase SWFD-6 (either printed book or CD-ROM version, which allows you to search, print, etc. from SWFD6 on your PC) AND a Subscription to the new Scannerstuff Online Newsletter (update service) and you will receive BOTH the Phoenix Metro Guide/SWFD6 Update Book ($15 value) AND a copy of the Scanner Programming System CD-ROM software ($14 value) with frequency data files for programming your BC245XLT and BC895XLT scanners. The SPS software includes sample frequency data files for 40 major U.S. metro areas to instantly program your BC245 or BC895 scanner without any research. Even if you don't own a BC245 or BC895 scanner, the SPS product is a great way to have sample frequency files for the nations largest cities for travel purposes. This is not simply an FCC license database... this is edited frequency data, in many cases included channel numbers and usage descriptions.

For more information on SWFD6 Book and CD please see:
http://www.scannerstuff.com/SWFD.htm

For more information on Phoenix Metro Guide/SWFD6 Update please see:
http://www.scannerstuff.com/MetroGuide.htm
(free with purchase of SWFD6

For more information on the Scanner Programming System software product please see:
http://www.scannerstuff.com/SPS.htm

If you have any questions please email sales@....

To place an order, simply order securely using your Credit Card (through PayPal) at www.scannerstuff.com. Your order will be shipped within 1 business day.

Dan Rollman
Scannerstuff

Remember:

Order SWFD6 Book or CD (your cost: $30)
--> Get Phoenix Metro Guide/Update FREE! ($45 total value)

Order SWFD6 Book or CD AND Scannerstuff Newsletter Subscription (your cost: $48)
--> Get Phoenix Metro Guide/Update AND Scanner Programming System software FREE! ($77 total value)

2009. Re: Free Scanner frequency update booklet

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-23 00:14:26 UTC
From: theherrs@yahoo.com
Topic: 2007 Message: 2009

Just a note that if you haven't checked out Dan's frequency guide, you really are missing some great information. I don't think scannerstuff.com does it justice. The sixth edition is about an inch thick, spiral bound, and packed with just about everything you could ask for... frequencies, talk group ids, 10 codes, and even some of the obscure lingo we all hear on our scanners. (I finally know what 'ALS' is!)

I'm not associated with the guide in any way, just a satisfied customer. I see a lot of posts here for information that is in the pages of this great guide. The free update makes this an even better deal.

Has some very early recorded audio from the WTC disaster. Sorry for
the slightly off-topic post, thought it would be of interest to all...

2011. Space Images?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-23 07:21:03 UTC
From: Alex Vrenios
Topic: 2011 Message: 2011

Hi,

I listen to police and fire frequencies here in Phoenix because it's an interesting hobby. What would really perk up my interest is seeing images sent down from space on my TV set.

The Shuttle goes up every now and then. The International Space Station (ISS or Space Station Alpha - did they rename that thing and not tell me about it?) is sending video down to Earth. The Hubble Space Telescope is up there too. Man, would I like to tune into what it sees!

So, assuming this isn't classified or encroaching on anyone's copyrights, has anyone given this kind of scanning any thought?

Alex

2013. Re: Space Images?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-09-23 16:13:13 UTC
From: Alex Vrenios
Topic: 2011 Message: 2013

Hello Again,

Yes, I know about the cable channel but I don't have (or want) cable TV yet.

First, my early assessment of the issues were that (1) the signal might be weak, requiring a low-loss amp behind a 2 meter dish, (2) that the (digital) signal was almost certainly compressed, and (3) perhaps encrypted. So far, it's a technical challenge, except for the encrypted part. Digital compression algorithms are available, but encryption is so much work that it's just not worth it.

An email I received offline, however, put me on to another serious problem: the ISS and the HST are in MOTION, adding doppler shift and perhaps only portions of each image on each pass into the equation, and Phoenix doesn't seem to be a favorite for fly-overs. The folks who receive and process these data have a world-wide network of very large dish antennas and know both the compression and (possibly) the encryption algorithms to use. Oh well...

Here's what I know beyond the cable channel option:

1. You can find out when the ISS is going to be overhead. See http://www.nasa.gov and click Hot-Topics (or something) to change the US flag next to the NASA logo (at the top of the page) into an ISS patch logo; click on that and be patient. In the lower left of that page click on Sky Watch and follow directions. You will, after fiddling with this delightful tool for a while, find all the times and dates when it is passing overhead at night so you can see it. (It is bright like Venus but it moves across the sky in about three minutes. That's from memory - I didn't time it.) You can get and print a star map background with the ISS path and times on it. You should know where to find those constellations, however. Any astronomy magazine's center fold should help.

2. You can listen in to the audio using FM on 143.615, 143.620, 143.625, 143.630, and 143.635 in a single bank and scanning through it. The frequencies are at .62 and .63 but with the doppler shift they appear to be transmitting at a shightly higher frequency as they are approaching your ground location, and at a lower frequency when they are moving away, much like the pitch change of a train whistle.

3. That NASA web site has webcasts. I've not followed up on this yet, but interested persons might want to have a look.

Thanks all,

Alex

The NASA Channel is on one of the geosynchronous C-band TV satellites and it's in the clear. I don't remember exactly which satellite, I think maybe Satcom F-4, but I do know that it's one over the Atlantic. If I remember right, around 80-85 degrees west longitude. Check NASA's website, they may have the proper coordinates and channel listed there.

I thought this might be of interest to the folks here in the Phoenix, AZ area. The web site where I found this article is:

http://www.ci.phoenix.az.us/NEWSREL/nrradios.html

Also, if you go to the website itself, don't bother to download the WAV file of Councilwoman Peggy Bilsten which is available
there. It is a 5.5 meg WAV file that is less than 15 seconds of talk and more than 5:45 of silence. Guess they haven't figured
out the new technology yet.

++
NEWS RELEASE
Maricopa County Helps Phoenix Police Department Save Costs With Loan Of Police Radios

---

September 7, 2001

The Maricopa County Sheriff's Office and the Maricopa County Board of Supervisors will loan 150 portable radios to the Phoenix
Police Department for critical communications. The 450 MHz radios will be used until the city of Phoenix makes the transition to
its new state-of-the-art 800 MHz radio system, funded by the 2001 Bond Initiative passed by Phoenix voters in March 2001.

The 800 MHz radio system is expected to be operational by the year 2003. The portable radios on loan from Maricopa County will
prevent the city of Phoenix from having to purchase additional 450 MHz radios, which will be obsolete in approximately three
years. "This generous loan from Maricopa County is going to save taxpayers over $400,000," stated District 3 Councilwoman Peggy
Bilsten.

The Tactical Support Bureau's Special Assignments Unit, Bomb Detail and Specialty Vehicle Response Units will be the primary
users of the equipment.

There are several places in town that carry the BC-780. Try Bronco One up on North 32nd ST or Ham Radio Outlet on Dunlap and about 19th Ave. There are also several people here on the list that can get you one as well I belive, I am sure they will contact you.

Hi folks,

Just wanted to let you know, the October, 2001 issue of the Scannerstuff Newsletter is now available for viewing online by Newsletter Subscribers. For information on the Newsletter Subscription Service, please see http://www.scannerstuff.com/newsletter.htm

Please forward this email to anyone you believe may be interested in the Scannerstuff Newsletter online.

Subscribers have access to the August & September issues as well (for a limited time), and all of the SWFD-6
updates contained in the 60-page "6th Edition Update" booklet (a $15 value in itself!).

The new September issue includes 16 pages packed full of information, nearly all for Arizona:
-Massive Bureau of Land Management Radio Programming List
-Coronado National Forest, updated ForestNet and FireNet frequencies / PL tones
-New agencies now dispatched by Drexel Heights FD (Tucson area)
-Elephant Head FD (Green Valley area) new dispatch repeater frequency
-Phoenix Urban Search & Rescue (AZ-TF1) tactical frequency at World Trade Center
-Paradise Valley Community College Public Safety - new frequency
-Mesa Police Department Unit Designators
-New Mesa Police Beat Map
-Yavapai County Sheriff's Department - New Operations Frequencies
-Tempe City Government - EXHAUSTIVE Talkgroup List for Police and city services, other information. 37 talkgroups in all!
-Portland Police Bureau updated beat map
-SPECIAL FEATURE: J. Robert Moss, local aircraft communications expert, writes for Scannerstuff a how-to guide to UNDERSTANDING AIRCRAFT COMMUNICATIONS! Includes explanations of types of frequencies and controllers, Center frequencies, maps, and even a sample ordering of communications to follow a flight out of and into Sky Harbor airport.

The Newsletter system is password-protected and available to current subscribers. If you're interested in local updated scanner information, tips, and
feature articles, I encourage you to try out a 6-month subscription for just $3 a month. Click on http://www.scannerstuff.com/newsletter.htm And if you are a current Newsletter subscriber, please let your friends in the radio and public safety hobby know about the service!

We are currently working on a detailed overview of Phoenix Police Department operations, from patrol to investigations to SAU (Special Assignment Unit, aka SWAT) for the November issue.

As always, we appreciate your updated and corrected information. Scannerstuff puts a considerable amount of time into research and acquisition of information for our publications and especially these monthly newsletters, but information directly from scanner hobbyists and professionals is always appreciated! Please email you corrected and updated information to updates@.... For questions or comments on the Scannerstuff Newsletter service please email newsletter@....

Sincerely,
Dan Rollman

From: Don Armstrong
Topic: 2024 Message: 2024

Morning all.... well this morning was one of those rare mornings
that I decided to drag out my PRO-2035 and go and verify some local fast
food resturant freqs... I know what you must be thinking, "kinda boring
down that-a way huh Donnie???".... well as I said, it was one of those
RARE things that I do!... anyway, as most of you may already know, the
drive up podium usually transmits continiously and then the headsets can
only be heard when someone is actually at the drive-up podium, and as
most of you may know, some of the podiums tx freqs are in the 30-36 mhz
range.... well, in an effort to find those elusive freqs, I had the limit
search looking from 30-36 mhz, and I found a few freqs that were more
than I bargained for!
I found voice comms on 31.240, 32.255, 33.900, 35.800 and
35.840... the comms were relitively good signal quality, and they
appeared to be "dispatching" type comms.... not the type typacally heard
on taxi freqs, more like private security, or delivery type services.
Well, upon my return back to the home QTH, I did a quick search
on the fcc webpage, and found these freqs to be liscensed to AT&T out of
NJ, with a call sign of KA87... they relate to satelite stuff!!! This is
all so very confusing to me! Can anybody help my blonde head understand
what I may have stumbled onto this cloudy Sunday morning?!

Hello,

Does anyone know what frequency Mesa Patrol is on? They were last on 461.2750 but heard something about them going to 800Mhz. S. Mtn.

Thx,

Joe

Don, Assuming they are not local freq's what you were hearing on the low frequency FM commercial band from 30 to 50 MHz is "SKIP" signals which hop for 1,000's of miles across the country about the same as it seems to be all of the time down on 27 MHz!!! This is one of the reasons I, as an amateur radio type, love the 10 meter band (28 to 29.7 MHZ and 6 meter band (50 to 54 MHz) operation. With relatively low power you can talk across the country. I live in the Kingman area and can talk to NY, NJ, TX etc. most any weekend running about 10 watts on SSB and 40 watts on 29.6 MHz FM! I believe what you were hearing were in fact skip stations. I get a big kick out of listening to the "Good Ole Boy's" in some sheriff department down south on the scanner from time to time. It sounds like Mayberry, RFD!!! (: -) While living in CA I would always monitor the CHP frequencies in the 42 MHz range. Sometimes, when the skip was coming in, the skip station would block out the local cars and give the dispatcher's a rough time. Keep a searching and listening! August ========== Don Armstrong wrote: > Morning all.... well this morning was one of those rare mornings > that I decided to drag out my PRO-2035 and go and verify some local fast > food resturant freqs... Thanks for responding August, but you misunderstood my confusion!... I understand about "skip" (been a ham for almost 20 years now), my confusion comes from the the FCC webpage! Let me backtrack a moment...
If you look up those freqs (35.800 for instance), there isnt any listings for them here in the state of Az, so if you use the "FREQUENCY" search (on the left hand side) you get nation-wide results, and you only get one call sign for those freqs! KA87, which is Violet Comms, (a subsiderary of AT&T), licensed in New Jersey, the site is in Arlington Va, and you get freq info regarding 12 & 14 gig!! You also get "CONDITIONS" and references to space!.... Thats where I'm pulling the Blonde Moment! I havent seen references like this before! Maybe someone understands this listing better than I do??!!

Don,

The 30-39 MHz band is intended to be a local frequency allocation, despite what the current solar activity demonstrates to the contrary. The FCC knows that and very likely (I don't actually know this to be true) assigns them much the same way as they assign TV, AM or FM broadcast frequencies: regionally. I haven't the slightest idea why you could not find anything beyond the one listing for 35.8 MHz but, for the record, I didn't do any better.

Another thing: they laughed at the guy who reported hearing Rommel's desert tank battle plans over a receiver on the east coast in the 1940s. Also, some school boys in England noticed Russian satellite transmissions being sent slightly later every evening, then earlier and earlier after the Christmas holidays. They surmised that the sunset time correlated well to this behavior, and sunset and satellites together led them to guess (correctly) that these transmissions were images - just before sunset the shadows are longest and the image from a satellite would have nearly 3-D quality.

Tracking this kind of stuff down is what makes this hobby fun, in my opinion. Keep us posted.

Alex, kx9i

Is anyone else hearing any other low-band comms? Have the locations been identified, at least what states the skip is coming in from, besides the possible NJ location Don was hearing?

(It would probably be easier if I actually went to bed right after getting home from work, instead of staying up till 4-5am then going to bed till an hour or so before needing to be at work in the afternoon. Never did hear any CAP flights.....)

What is the shortest range and longest range for skip like this? In other words, if I wanted to listen for certain states with agencies on low-band, what choices would we have here in Arizona?

Don, I have often run into this type of problem with freq's being registered to Violet License Co LLC & have gotten nowhere.

It seems like gov't/military/amateur radio freq's are all there.

I checked the following freq's at random 30.45/40.25/146.61/442.2 & they come back to KA87. Can you give any more detail as to what you heard on the freq's you have listed,especially since 33.900 is a fire freq.(it is used a lot here in S.E. part of PA) ---Charlie

John,

I see you are a ham, and very likely have a ton of technical literature. Try looking up MUF, or Maximum Useable Frequency. The answer to your question has to do with what frequency range will reflect off the ionosphere, and that value changes from hour to hour.

We are discussing the 30-40 MHz band (in this thread) and the solar cycle favors skip in those frequency ranges. After the sun comes up, you will begin to hear stations in the east. The signal source will gradually shift closer to your latitude around Noon, then shift out to the west as the sun gets ready to set.

The sun is a source of energy. You can imagine it energizing a "cap" of the ionosphere centered over the earth, at a point where the sun directly is overhead. This cap is like a mirror to VHF during peaks in the solar cycle. (We are at a peak now.) Think about where this rf mirror is located, then guess at the skip angle (or better yet calculate it with some specialized software, like MiniMUF or PropMan) to determine where these signals might be coming from.

In the wee hours of the morning you might hear something from London under optimum conditions because the energy cap is over the Atlantic and the radiation angles are at their lowest, the longest possible single-hop. When they sign, which might very well be automatically generated Morse Code, you will get an idea of where they are coming from.

TV DXers: If you don't have channel 3, tune your TV to 3 and watch for signals fading in and out throughout the day. (This should work on any channel, 2 through 6, that is not already occupied by some local station.)

Good listening!

Alex

Hey there Charlie and the group... I guess these guys Violet, must be some sort of spooky group huh???... Does anybody have anything further on who, what, where these guys are?????
Charlie, you asked for more detail in what I heard... lets see if I can make heads or tails of my notes.....
31.240: Voices heard, it sounds like a base station talking to field units, field units are barely understandable, it sounds like the base is giving address's but I dont hear any of the usual 10 codes or such.
33.900: This is a repeated channel, I can hear about a 2 second squelch tail.... again it sounds like a dispatch sending field units, but not neccessarily police/fire related... could be a buisness, or a private security company. Did hear a cw id.
35.800: good solid carrier, but if the was any audio, it was so under deviated as to make it unreadable... did hear a cw id.
33.300: weak carrier, but there none the less.... no disernable audio.
34.270: same as above.

Thats about it for making sense of my chicken scratch notes, I hope this helps Charlie!

Don, after looking over my notes the only freq's I have a record of monitoring are 33.900 various county PA FD's & 31.2400 which I only have it listed as an unknown road crew/unknown location and also heard them talking about trucks and possibly fuel oil unknown location. This morning I heard the word "trucks" on 31.24 and that was it didn't hear anything else on the freq. In other words we're getting nowhere fast. I'll let you know if I can get any of this figured out. Keep me updated from your side of the country.

Thanks, Alex. I don't have a lot of books, just an older (decade or so) copy or two of the ARRL Operating Guide, and probably a few other books around here. What I have read though basically explained how it works as you did, but never gave an actual range in miles. Something I could put on an atlas that I could visualize. I guess because of the nature of it, we can't. It's constantly in a state of flux.

Are any of the software programs free? Because right now, that's all I can afford.

Thanks again.

John.

Hi,

There is free HF propagation software at

http://elbert.its.bldrdoc.gov/hf.html

Click on HFWIN32, then click "Download and Install from Hard Drive"
to get the Win95/Win98/NT(maybe) version.

This took 40 minutes over my 56k modem. Once complete, choose "open
folder" on the (still open) download popup box and then double click

itshfbc.exe

to install. Use the default directory. Do NOT try to install
under "Program Files" because the embedded blank in that name causes
trouble, per the README.txt file. This takes a minute or two.

I also downloaded the two pdf-format manuals, which took two and
three minutes respectively.

Have fun! Sorry it ain't VHF, but hey...

Alex

I heard somewhere that MCSO had given Phoenix a bunch of their Digital 800MHz radios to tide them over until Phoenix got their trunked system going. Maybe that is where they have gone.

From: Dan Rollman
Topic: 2039 Message: 2041

Actually, MCSO gave Phoenix a bunch of their old analog UHF radios. Phoenix was in a bind, in that they needed some more UHF radios, but didn't want to spend big bucks for radios they'd only use a couple years (theoretically, depending on when one believes the Phoenix trunked system will become fully operational). So that's where MCSO came in, since MCSO had many old UHF handhelds they no longer needed anyway.

Not saying Vice couldn't have County digital radios... just clarifying the large loan of radios from MCSO to PhxPD was UHF radios. I haven't monitored or recorded the old UHF MCSO frequencies for a while... wonder if/what they are now being used for. Don't see any licenses pending for them from the FCC, but no reason MCSO can't authorize other agencies to work the frequencies for the time being. Perhaps some of those on this list affiliated with MCSO and/or the local police comm techs might jump in and provide a little insight on the old MCSO frequencies, related the original question or not.

Anyway, I quote the Phoenix PD Press Release (http://www.ci.phoenix.az.us/NEWSREL/nrradios.html) below:

"The Maricopa County Sheriff's Office and the Maricopa County Board of Supervisors will loan 150 portable radios to the Phoenix Police Department for critical communications. The 450 MHz radios will be used until the city of Phoenix makes the transition to its new state-of-the-art 800 MHz radio system, funded by the 2001 Bond Initiative passed by Phoenix voters in March 2001.

The 800 MHz radio system is expected to be operational by the year 2003. The portable radios on loan from Maricopa County will prevent the city of Phoenix from having to purchase additional 450 MHz radios, which will be obsolete in approximately three years. "This generous loan from Maricopa County is going to save taxpayers over $400,000," stated District 3 Councilwoman Peggy Bilsten.

The Tactical Support Bureau's Special Assignments Unit, Bomb Detail and Specialty Vehicle Response Units will be the primary users of the equipment."

I'll try to give a listen. What are the various callsigns for the different users? I don't know how to tell them apart.

From: John H. Guetherman
Topic: 2043 Message: 2043

I'd like to know if there is any current (past week or two) milair activity over the Phoenix area, and if so, what frequencies are being used? I'm going to try to listen this weekend with my PRO-43, the only milair capable radio I have, and would like to have some specific frequencies to monitor. The entire 225-400 MHz band is too large to effectively search through, at least with the Pro-43.

I'm wondering if the proposed NATO AWACs will be utilized only along our coastlines and land borders, or if they will be used all over the U.S.? They could probably be used against drug-carrying planes coming up from Mexico, too. Not sure how frequent that mode of transportation is used, but any plane coming across the border like that would automatically be suspicious, and would have to be checked out, since we wouldn't know if it was carrying drugs or terrorists, untill we do check it.

MCSO loaned PhxPD 150 UHF Saber 1Es, which Phoenix then reprogrammed for their UHF channels. They are being used to replace radios as they break, and are issued as needed to officers that have a need for 450 radios. Basically, this means anyone other than patrol officers. The old MCSO UHF system has had no activity since it went off the air - I'm still monitoring it.

As far as Phoenix Vice, I still hear OCB and NET squads working on 450-4 and 450-7 occasionally. A lot of what they do is accomplished on simplex or via MDT or Nextel. I have noticed that they have been more discreet lately when it comes to giving out locations and phone numbers over the air.

Subject: RE: [ArizonaScanner] Phx Vice

Actually, MCSO gave Phoenix a bunch of their old analog UHF radios. Phoenix was in a bind, in that they needed some more UHF radios, but didn't want to spend big bucks for radios they'd only use a couple years (theoretically, depending on when one believes the Phoenix trunked system will become fully operational). So that's where MCSO came in, since MCSO had many old UHF handhelds they no longer needed anyway.

Not saying Vice couldn't have County digital radios... just clarifying the large loan of radios from MCSO to PhxPD was UHF radios. I haven't monitored or recorded the old UHF MCSO frequencies for a while... wonder if/what they are now being used for. Don't see any licenses pending for them from the FCC, but no reason MCSO can't authorize other agencies to work the frequencies for the time being. Perhaps some of those on this list affiliated with MCSO and/or the local police comm techs might jump in and provide a little insight on the old MCSO frequencies, related the original question or not.

Anyway, I quote the Phoenix PD Press Release (http://www.ci.phoenix.az.us/NEWSREL/nrradios.html) <http://www.ci.phoenix.az.us/NEWSREL/nrradios.html)> below:

"The Maricopa County Sheriff's Office and the Maricopa County Board of Supervisors will loan 150 portable radios to the Phoenix Police Department for critical communications. 2047. Signal quality...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-13 17:16:36 UTC
From: John LaBua
Topic: 2047 Message: 2047

Is there anyone else who has problems receiving Glendale PD that shouldn't?

I've noticed that recently (it has been happening almost since I got the scanner but has gotten worse) that Glendale PD many
times has alot of static with the received signal? I can receive Scottsdale PD with a full (or nearly so) S-meter and a nice
clear signal but Glendale often is only one or two bars on the signal meter and many times has ALOT of static mixed in.
Sometimes enough so that the audio is impossible to hear. In fact, I've noticed that sometimes the control channel is lost due
to such a poor signal and it will scan the freqs looking for it.

Is there something wrong with the Glendale's radio system? If so, are they aware of it? I've even heard many times an officer
being told that he has alot of static and can't be understood.

I was going to invest in a better antenna (mine is more than several years old) but since I can receive Scottsdale so well and
it is much further away I've held off. There are many times I can receive the Tempe PD trunked system better than Glendale PD
from the 47th Ave and Bethany Home Road area.

Any hints or info on this?

John

2050. RE: [ArizonaScanner] Signal quality...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-13 19:17:02 UTC
From: Dan Rollman
Topic: 2047 Message: 2050

Tempe uses GPS Time-Controlled signal splitting of some type, which is why reception is sometimes difficult on scanners. Motorola radios don't have any trouble with the Tempe signal. Basically, Tempe has 10 frequencies in their TRS, and all 10 (the same ten!) transmit off Tempe Butte and also the tower at the South police substation in South Tempe. So when one frequency is transmitting a signal, it is actually transmitting from two different towers at once, as I understand it from the Tempe radio shop, and using incredibly precise timing mechanism to "overlap" the signals just right, so as to get a higher quality signal with better coverage on a Tempe motorola radio, but a more difficult signal on a scanner that includes a lower-end receiver. Apparently the scanners just don't do nearly as good of a job handling this "double signal" overlap and making it advantageous as the real radios do.

I have no reason to doubt this, since several Tempe cop friends of mine report none of the "signal quality" problems on their department radio, that my scanner sometimes gives me. Most of them say with very rare exceptions, they get a solid, crisp signal all over town, inside and outside of buildings.

As for Glendale, can't help there!

Dan

This kinda explains why Tempe PD comes in fairly evenly as far as signal goes. Being in Glendale I don't have the problem of receiving two signals that are close to the same in strength. Maybe you just need to have a remote receiver on the other side of town Dan! ;-)

> As for Glendale, can't help there!

I've also noticed that there have been conversations in which the signal was very poor and then, after a short break with no transmissions (only a second or two), that the signal (same conversation) all of a sudden comes in crystal clear like maybe it is using a different repeater or tower.

Voice comms can (and do) take place on any of the freqs below except the active control channel. Also, the control channel changes on a daily basis (sometimes more often) around midnight and then has to be unlocked and the new CC locked out.

Its best to enter in all 10 frequencies, . . . then lockout the non-police talkgroups, if operating a trunk-type scanner.

I like all the P.D. channels, ...guess my favorites are channels E & F where you tend to hear more 'off the cuff' chatter from the 'VICTOR' & 'NORA' units, ... channel A for the hot traffic, ... all of the channels are worthy though, ... hard for me to pick favorites.

Thats why I like the BC-780, ... no locking & unlocking when in
trunked mode.

Dean, . . I thought you were just referring to Glendale traffic?
Those are Phx P.D. channels if memory serves me correctly?
You should purchase a Southwest Frequency Directory, . . .
it is loaded with useful information. Head over to scannerstuff.com

I have had this problem for about the past 1.5 years. I have a TrunkTacker handheld. When I first programmed the freqs in about 3 years ago, it worked great. Now, it's about every other day or ever 2 days, I think actually, that I can't get a lock on the control channels (while they may have only one active CC, if I manually scan, there are two freqs that have the control signal). The other days, it works fine.

Generally, if I can get a lock, things sound fine. It's that third day....at night, I can scan manually, since the city doesn't have all that other garbage (uh...non police) traffic. During the day, I don't bother...maintenance and dial-a-ride get really boring... :)

Tim,

What frequencies do you have programmed for Glendale? Not sure why you'd get two control channels, unless maybe you have the MDT (mobile computer) frequency stuck in by accident (which sounds similar to a trunked control channel, but not exactly the same).

Dan, I have found that Glendale PD does use an alt control channel with their trunking system. If one was to monitor them long enough they would have this info sent to them on. It in not the 856.2125 MDT freq they have. I know that for a Motorola trunking radio to use the system, it needs both the freq's in the control channel listing. If you need to know both, let me know and I will look up in my info.
Thanks,
Dave

Hi Dave,

Please do let us know that 11th trunked frequency. I have never heard of a single-site, single-system Motorola trunked system using two different control channels at the precise same time. Obviosuly the system switches control channels periodically, but I am not familiar with using two from the same site simultaneously. I guess I'll learn something new on that!

I do have 856.2125 as MDT and 860.4875 as back-up on Shaw Butte, and then the 10 frequencies that are members of the trunked system, but I don't have another trunked control channel beyond the 10 known. I have monitored the system in conventional mode, and have no luck at detecting a 2nd control channel.

Thanks,
Dan

Morning to the group.... late friday I saw something rather
unusual (for this area!)... comming in for a landing at SV Muni. / Libby
Army Airfield was what appeared to be a comercial airliner of a DC-9
type.... not normal in this area!!! Puddle jumpers, yes... large military
transports, yes... midsized comercial jets, no!
Anyway.... I investigated the plane saturday morning, (it was
still parked here!) and found no markings on the thing.... just the N
registration number.... so I went to the group's website, and frantically
looked for a web page reference to look up the N number.... much to my
suprise, I found none!!... So off to the great Super Hiway I go... quite
a task for this old tractor (386) to get off of the dirt roads and head
down the Super Hiway!..... Heres a page that I found, that is simple and
seemingly correct.....

http://162.58.35.241/acdatabase/nnum_inquiry.htm

I hope others can verify it's (info) accuracy..... Gotta start
the monday morning routine!

2069. Re: Reception / Glendale

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-16 09:04:56 UTC
From: John H. Guetherman
Topic: 2062 Message: 2069

What I've heard, starts out as a high-pitched tone, then warbles. It repeates a few times, then goes to another frequency, and cycles through several of the frequencies. I believe it actually has a TG of 000-0. I've also picked up several "noise bursts" as I described them in my notes, on multiple TG's in the past. Mostly 000-X, but also on 100-6, 200-8 and 400-10. (Haven't had a trunktracker for the past year, but for a few occasions when I borrowed my sisters'.) I've heard the tones while listening with my PRO-43 in the past half hour while composing this message.

One other problem I had noted, and has been noted by other users on one of the trunktracker websites, had to do with falsing on the connect tones used in Motorola systems, which can cause (at least) the BC-735 to think that a transmission has ended. It can cause the audio to break up some. I had noticed it even in downtown Glendale.

I'm monitoring the 10 frequencies of 856.-860.4375 and 856.-860.7125. I am only hearing one control channel, on 860.4375 at the moment. The MDT's are on 856.2125 right now. Hope this info helps some.

BTW, I would start to lose Tempe's system westbound on I-10 between the Maricopa and AZ-51/202 transitions (west side of Sky Harbor) with my 235 after leaving Mill Ave. in the past. I have however, picked them up at Jomax and Cave Creek Rd's. So, it won't go very far west, but it will go north.

From: John H. Guetherman
Topic: 2071 Message: 2071

This has NOT been confirmed yet. I found this post on socalscan on the 13th. There were two requests for further info, and specifically, a link to the story, but no reply yet from the original poster:

mobile radio technology magazine reports this week....

The national security council and the FCC quietly asked uniden to cease production of and apco 25 digital scanner for the time being. The NSC cited national security issues in the request (not an order) as many military and police agencys, border patrol and INS are unencrypted apco 25 (astro). Uniden reps will not even discuss the issue for fear that the NSC might also pressure Uniden to halt production of the BC-780...

Like I said, this may not be true. If I see more about it, I'll post.

From: Tracy
Topic: 2071 Message: 2072

I think we can safely say this is a hoax or at best a rumor.

1. The person who initially posted this to SoCalScan is not a regular contributor to the group and is using a yahoo e-mail address.

2. There is/was no such article in Mobile Radio Technology magazine, the magazine that initially broke the news of Unidens plans for a digital radio monitoring product.

3. The quote is full of spelling and grammatical errors, not something you would see in a professional magazine like Mobile Radio Technology magazine.

4. P25 standards have nothing to do with keeping public safety communications secret, just the opposite. One of the main reasons for adopting a national standard for public safety communications is so that agencies can talk to each other even if they are using radio equipment from different manufactures. The current events emphasize this dramatically.

Thanks Tracy. I'll pass it on to the phlscanner list I also posted on about this. I wonder what the point was of a hoax like this? Even though it did get passed on a bit, it only took a day to confirm that it's not true. Wouldn't even seem worth the effort, to have a hoax debunked so quickly.

John.

2078. "White Powder" scare audio

Not sure if anyone is interested, but, here is a short audio of one of the many "White Powder" calls in Tucson.

http://www.majesticalliance.com/docs/wpscare.wav

2079. RE: [ArizonaScanner] "White Powder" scare audio

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-18 17:10:31 UTC
From: Dan Rollman
Topic: 2078 Message: 2079

Thanks for that audio. You must have a well placed antenna! I heard Maricopa County RMFD in the background there at one point.

These white powder calls are definitely picking up. These days you hear as many "white powder" haz mat calls as fall injuries! LOL

Phoenix fire has now modified their responses down from a full hazardous situation call to a single closest engine and a haz-mat engine. Not sure if agencies in the Tucson area are doing something similar.

Dan

It is a 3 element VHF beam pointed at Mt. Lemmon. I am located about 15 miles west of Tucson, about 8 miles south-southwest of the Marana Airport.

Dan,

We are down to a BC and the closest engine or ladder. Some of the responses have been upgraded for various reasons but the result has all been the same - nothing much found. They are looking at changing it to a chief officer and a police official. Yesterday, due to all available BCs being committed, they had to wake an AC for a response...

are commercial airliners able to communicate with each other while in flight and if so what are the tucson area freqs. Also, a short while ago i was near midtown tucson and overheard traffic sounds and what sounded like a female voice. I think it was an undercover prostitution sting but i was unable to remain in the area to hear enough. It was on 154.875. It carried for about 1/2 mile until fading away. Any ideas??

thanks

Scott,

Yep! Airliners can talk to each other in flight. Most of the time they will keep the frequency they are assigned on and monitor it, but will switch to the "company frequency" which differs from airline to airline. Currently, all pilots inside the class bravo airspace (30 miles around Sky Harbor) are required to monitor 121.50 MHz. When military jets go up to intercept planes that have been showing weird characteristics in their flight, they most often call on that frequency to try to identify that plane and what they are doing. Hope this helps!!

Scott

On the second part of your questions, 154.875 is good for Tucson PD, Channel 9. It's a mult-use frequency so you could hear all kinds of traffic.

HMMM

From what I was told tonight, Phx has indeed scaled back the "Anthrax" response ... but its slightly different what you have.

Presently they send the single closest engine along with Car 598 who has <2> specially trained firefighters and <1> specially trained Phx PD officer.

Hope this helps!

Mike

Thanks for that audio. You must have a well placed antenna! I heard Maricopa County RMFD in the background there at one point.

These white powder calls are definitely picking up. These days you hear as many "white powder" haz mat calls as fall injuries! LOL

Phoenix fire has now modified their responses down from a full hazardous situation call to a single closest engine and a haz-mat engine. Not sure if agencies in the Tucson area are doing something similar.

Dan

Fantastic page, Tracy ... Thanks. You've done some really good stuff
for the hobby.

However, being a non-pilot, I'm trying to imageine how one would land at
an airport with a runway that has a 90 degree bend in the middle:

If the runway were pointing at 90 degrees of magnetic north then
the runway would be runway 9 and the other end of the runway
would be runway 18 (180 degrees, the last digit is dropped).

Whoops. :-)

Could you please speak English when you post to this list?
I would like to think that your posts might be informative, but with your lack of grammar and poor attempt at Eubonics, I am unable to understand one thing you have said. Dan has done a great job of keeping this list going. Everyone else seems to do a great job of posting great information that is written in plain English. I realize this is America, the greatest country on Earth. With America comes certain freedoms, but for this list could you please just communicate in good ol American style English?

Thanks

Mike

Mike, Chill out a bit. Please don't forget how to laugh. We as a nation are in some stressful times right now which may well get worse before they get better. Americans are a tough bunch when you mess with us but we also have one hell of a sense of humor as well and we could all use a good laugh these days! Btw, american english has a good number of problems, just ask any Brit about it! (:-) August

State TAC which is 460.225 MHz, 151.4 PL.

This is the STATE frequency with an alternate PL.

We haven't used D5 frequency within the last 8 years (that's
how long I've been here.)

Is that the original programable scanner that you needed the book to program it? If so, I might have the book to mine. Just can't remember if that is the 100XLT.

Thanks Walter! I moved 2 yrs ago and never put my outside antenna back up so I guess I can't hear them simplex from home.

Been listening to the fair and other stuff for about 25 years. It was sure nice when they used State VHF for the fair and VHF for all the Districts . You could hear units on State talking to the Flagstaff console here in Phoenix.

2100. Re: [ArizonaScanner] White Powder

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-20 15:54:42 UTC
From: Dan Rollman
Topic: 2081 Message: 2100

August,

Mike, Andy, and the other 15 or so people who've emailed me all have valid complaints, and none of us have any reason to allow wartime to justify stupidy. The poster in question has been asked on more than one occassion in the past before to cease unintelligable ramblings that really say nothing (you realize the posts in question don't really convey anything useful, even after spending 15 minutes or so "decoding" a paragraph).

I appreciate useful contributions to the list from anyone who wants to participate, but I must ask that the time and email boxes of others be respected. So, that said, last reminder to d952@.... Keep it on topic, and keep it in English like the rest of us.

Thanks,
Dan

---Original Message---

Mike,
Chill out a bit. Please don't forget how to laugh. We as a nation are in

some stressful times right now which may well get worse before they get

better. Americans are a tough bunch when you mess with us but we also have one hell of a sense of humor as well and we could all use a good laugh these days!

Btw, american english has a good number of problems, just ask any Brit about it! (:-)

2101. Federal Radio Info....

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-21 14:50:23 UTC
From: Don Armstrong
Topic: 2101 Message: 2101

I came across these freqs in some "federal" radios, I recognize
the 165.7375 as US Customs X-RAY, but I dont have anything referencing
the other freqs... I find the "labeling" somewhat unusual to say the
least.... Any help ID'ing these freqs would be helpful!

RX PL TX PL NAME/USE
165.7375 100.0 Simplex 100.0 AIR AZ
165.6375 100.0 Simplex 100.0 AIR NM
168.875 CSQ 169.875 CSQ USFS A-S
168.350 CSQ Simplex Fire Call Up
167.950 CSQ Simplex BLM BAG
168.550 CSQ Simplex MIMS Call Up

73's Donnie

Somewhere in the "pucker brush" near
Libby Army Airfield
Ft Huachuca Az

It looks like you have them ID'd already as BLM. Here's the list of
BLM frequencies I have if you'd care to compare them.

2103. Re: Federal Radio Info....

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-22 00:11:30 UTC
From: Don Armstrong
Topic: 2101 Message: 2103

Well Tracy, your partially correct... the ID's came from the radio's themselves, but I dont have anything in my database's to cross reference ANY (with exception of the first one) of those freqs.... in other words, these are new freqs to me, and I want some verification of their use.... Does any body else have any references to them, and if so, what do you show as their use/name...

RX PL TX PL NAME/USE
165.7375 100.0 Simplex 100.0 AIR AZ (US
Customs X-RAY)
165.6375 100.0 Simplex 100.0 AIR NM (?????)
168.875 CSQ 169.875 CSQ USFS A-S (????)
168.350 CSQ Simplex Fire Call Up (????)
167.950 CSQ Simplex BLM BAG (????)
168.550 CSQ Simplex MIMS Call Up (????)

73's Donnie

Somewhere in the "pucker brush" near
Libby Army Airfield
Ft Huachuca Az

BTW... thanks Tracy for the site explaining the airband allocations!... nice chart showing airspace use's!!

Michael :)

I, myself, haven't heard these frequencies. But then again, I haven't had time to listen. I've been busy with the CAP stuff.

I got them off of a website that no longer exists, that is why I am posting them here versus providing a link.
Note that the date of the information is 1998, but ....

Good Luck,

John

The 155.010 / 155.850 pair is a Hidalgo County Sheriff's Office (NM)
Repeater. As you know, Donnie (but others may not) Hidalgo County is Cochise
County's neighbor to the East.

165.975 is a USBP frequency according to the Southwest Frequency Directory
(www.scannerstuff.com). The others federal frequencies may be also.

The photo radar trucks used to be active users of Scottsdale's radio system. They called in their locations on the A or C dispatch channels and had their own talkgroup(3344). With the exception of one call to get assistance for a disabled motorist, I haven't heard anything out of them. Any idea where all that radio traffic went?

2111. RE: [ArizonaScanner] Scottsdale photo radar

Topic: 2110 Message: 2111

All (or at least "virtually all") users of the Scottsdale city 800 trunked system are migrating over to the Maricopa County Thompson Peak system (See Page 74 of Southwest Frequency Directory for the frequencies). Seems Scottsdale PD is actually one of the last city agencies to actually make the full migration. *Most* Scottsdale city departments have moved over to the County system. Apparently SPD is moving at this time (although they can still be heard on the city system right now).

So, with all that said, my guess is the photo radar trucks are one of the majority of Scottsdale city agencies that have already made the full cutover to the Maricopa County system, either analog or digital.

From: Tracy
Topic: 1664 Message: 2113

If I recall correctly, the Pro-89 does not include the military air band but that doesn't mean you can't listen in on some of their operations. You can try some of the Albuquerque Center frequencies where you should be able to pick up tanker operations. Also keep 121.5 in your list of frequencies. 121.5 is a common calling frequency used for emergencies. Also I was able to pick up some communications in the days after the Sept 11 incident on 148.125 which included pilots intercepting aircraft and such. This was in the Los Angeles area so I'm not sure if it would be the same frequency in use in Aridzona.

If you new to monitoring the air bands then you might want to check out my aviation monitoring guide:

http://www.freqofnature.com/airguide.html

Here are the different high/low in-route frequencies that you would want to monitor depending on your location:

Albuquerque Center - 134.6 132.8

Alamagordo - 132.65 132.65
Amarillo Nr 1 - 127.85
Amarillo Nr 2 - 134.75
Animas - 134.45 133.725 133.0 127.95
Carlsbad - 132.55
Childs Peak - 135.15 132.45 126.45 125.25
Clines Corners - 133.65 132.8
El Paso A - 134.175 132.55
El Paso B - 133.275 128.2
Fort Stockton - 134.175 132.55 132.2
Globe (Site Nr 1) - 135.725 132.9 132.9
Globe (Site Nr 2) - 135.15 133.85 132.35 132.35 125.4
Guadelupe - 133.225
Mesa Rica - 135.05 128.675
Mount Dora - 133.05 128.225 127.85
Prescott - 135.725 135.725 135.325 134.325 128.45
Raton - 132.8
Roswell - 132.65 132.65
Sandia Mountain - 132.8
Seligman - 135.325 128.45
Tesuque Peak - 132.8
Truth or Consequences - 128.2
Tucson - 133.0 134.45
Tucumcari - 135.7 133.55 126.85
West Mesa - 135.05 133.65 125.2

Whalebone Farm House - 125.6 133.7
Winslow - 132.9 124.5
Zuni - 135.8 134.6 132.9 125.2

Having some trouble locking on to the data channel for the Scottsdale and Maricopa Thompson Peak sites with my Radio Shack Pro-90. It's a problem I've never had in the years I've owned the radio. The signals are strong in normal mode (I can see Thompson Peak), I've tried re-setting the fleet map to E2 or E1P10 to no avail. Suggestions welcome.

Are you sure that it's a data channel you're hearing ?? There's a lot
more digital talkgroups active on TPK lately. Perhaps that's what
you're hearing.

The fleet map setting shouldn't affect whether or not you can lock on to
the control channel.
How 'bout if you don't scan, but just sit (in trunking mode) on this
channel that you think is a data channel? Do you see talk groups
popping up on the display ?

I know Scottsdale is moving to the county TRS, so perhaps this is an MDT
channel you're hearing.
What's the frequency?

--

On a related note, does anybody know where the Fountain Hills Marshal's
Department moved to?
They used to be 700-1, as a Type-I user, then they moved to 1456 et al.
Now, I don't hear them anymore. I suspect they've moved to the county
system, but I don't find them in search mode. They will be distinctive
by most of their call signs being David-xxx and "Dispatch", as in
"Dispatch to David-6".

From: Dan Rollman
Topic: 2115 Message: 2120

Thompson Peak site (now with Scottsdale PD and MCSO together) is now using:

851.3375
852.7125
853.3625
853.5625
853.7625
854.3375
854.5875
857.2625
857.7625
857.8625
858.7625
859.2625
859.7625
860.2375
860.2625 <-- Data Channel
860.7625
860.9625

We're working on a complete rundown on all the changes for a big article in the upcoming November issue of the Scannerstuff Newsletter (http://www.scannerstuff.com/newsletter.htm). A lot of listening is going on to try and figure out as many of the details of the recent changes as possible as they relate to scanner hobbyists.

This will include a bunch of new talkgroups for SPD and some other agencies.

2122. New talkgroups

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-26 04:54:43 UTC
From: kjnc@prodigy.net
Topic: 2122 Message: 2122

Thanks for the list, Dan. With the re-programming, my Pro-90 is as good as new.

Here's a list of what I've found so far:

Scottsdale PD
A/south 4208
B/tactical
C/north 4272
D/records 4464
E/car-car 4432
?/training 5264

Fountain Hills Marshall
Dispatch 7920
Tac 2

Probation (I guess)
17811, 18000, 12848, 12816, 17872, 18032, 17875, 18099

Facilities
176

I will update as able, additions and clarifications most welcome.

2123. RE: [ArizonaScanner] New talkgroups

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-26 23:38:41 UTC
From: Danz, Dan
Topic: 2122 Message: 2123

Scottsdale Talkgroup nomenclature stayed the same, I'm betting, and just the talkgroup ids changed.

4208 1A/South Dispatch
6640 1B/Hot/Emergency/Chase
4272 1C/North Dispatch
4464 1D/Info
4432 1E/Events
???? 1F/Tac-1
???? 1G/Tac-2
???? 1H/
???? 1I/

And then there's the Detectives, Narcs, and SWAT channels that we're going to have to figure out.

I don't know who 5264 is.

In Fountain Hills, thanks to Dan Rollman, I found and confirmed these
7920 1/Dispatch
7952 2/Tactical
7984 3/Car to Car

Of the others you listed: These are probably county functions that you can carry over from the White Tanks and other repeaters

176 - County Facilities Management
12848 - Rabies and Animal Control, East
12816 - Rabies and Animal Contro, West
18000 - ? See below
18032 - ? See below

17811 is 17808 + status bits of 3 (see below)
17875 is 17872 + status bits of 3,(see below)
18099 is 18096 + status bits of 3, (see below).

18192 is an Adult Probation Tactical talk group.
And for Juvenile probation, I have 17904 (A), 17840 (B), 18096 (D) 18128 (E).

So, lets see if we can fill in some of the gaps:

17808
17840 - Juvenile Prob B
17872
17904 - Juvenile Prob A
17936 -

17968 -
18000 -
18032 -
18064 -
18096 - Juvenile Prob D
18128 - Juvenile Prob E
18160 -
18192 - Adult Prob Tac

This, it's a good guess that these are some kind of Probation channels ... Giveaway would be the callsigns: Foxtrot, JIPS, unit-initiated traffic (as opposed to dispatcher-initiated), use of 10-11 which I think means finished with present assignment, and frequent use of the phone patches to check their voice mail.

Status bits:

17811 is 17808 + status bits of 3, which means it was patched to another talk group
17875 is 17872 + status bits of 3, which means it was patched to another talk group
18099 is 18096 + status bits of 3, which means it was patched to another talk group and this is Juvenile Probation D.

This is frequently done at nighttime when you have reduced traffic and only one dispatcher for 2 or more talk groups.

You also might see some of the MCSO Patrol talk groups show up with status bits of 7, meaning they're multi-selected (dispatcher transmitting on all groups at once).

If you have an older radio than the 780, you'll have to program both 17811 and 17808 as well as 17872 and 17875 or depending on what you enter, you'll miss the patched or unpatched use of the talkgroup.

Motorola TRS Type-II flags

ID+0 = Normal talkgroup.
ID+1 = All Talk Group (a Type II "fleetwide" or "all call" function).
ID+2 = Emergency talkgroup (somebody hit the emergency button).
ID+3 = Bi-directional talkgroup crosspatch.
ID+4 = Emergency patch.
ID+5 = Emergency multi-select.
ID+6 = ? (may not be used).
ID+7 = Multi-select (dispatcher broadcast on more than one talkgroup).
ID+8 = DES/DVP digital encryption) talkgroup.
ID+9 = DES/DVP All Talk Group.
ID+10 = DES/DVP emergency talkgroup.
ID+11 = DES/DVP bi-directional talkgroup crosspatch.
ID+12 = DES/DVP emergency patch.
ID+13 = DES/DVP emergency multi-select.
ID+14 = ? (may not be used).

ID+15 = DES/DVP multi-select.

One way to spot a talk group with non-zero status bits is to convert it to hex. The last hex digit (4 bits) is the status bit area. For example, Hex(17875) is 0x45D3. That means this is the 0x45D0 (17872) talk group with status = 3

Another sanity check you can do for Motorola talk groups is drop the last hex digit, convert the remaining digits to decimal and if its not an odd number, something is funny. It has to do with the status words transmitted with the voice channel not having enough bits for all the talk groups, so they drop a bit on the right, which means that Motorola recommends assigning only the odd-valued talk groups. That's why you usually see 48 (30x) as the first talk group, 80 (50x) as the second, etc. Using the above example, 0x45D is 1117, which is odd, meaning its okay.

Good luck

123.100 belongs to the Civil Air Patrol. For many years helicopter pilots used this frequency as the air-air chat channel.

They have now all switched to 123.025. Every helicopter in the sky typically monitors this frequency while flying in the area.

Phx PD has a company frequency, but you will here them talking to each other mostly on 123.025 also.
There is so much radio traffic and frequency changing that the helos have to do, it easier to just stay put on one freq for air to air stuff.

123.025 can be quite active at times ... especially when you are close to a bad accident that has media and medical helos near it.

Hope that helps

Mike

You know, Kevin - you just explained something ..

Yes, on our old consoles when we were in the basement we had an aircraft channel that we used to monitor. Ron, in particular, got a kick out of listening to the helo pilots chit chat.

But since we moved upstairs, I don't hear anything on the channel anymore. The Westside console operator monitors it, and I know I've had it turned up on nights when I work that console, and I haven't heard anything on it, ever.

My records, from several years back - from going thru the FCC licenses in radio - show WLQ5 as being on 123.100 and it's called Search and Rescue.

So, one of three things here:

1) We have the right frequency, but since the helo guys got off of it, there's not much traffic.
2) We're monitoring the wrong frequency, and should switch to 123.025
3) The connection to the new consoles doesn't work.

I never did understand why we needed to monitor the helo coordination stuff, but I sure can understand why we might need the SAR frequency.

2125. RE: [ArizonaScanner] New talkgroups

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-27 06:09:51 UTC
From: Dan Rollman
Topic: 2122 Message: 2125

5264 is the Training channel for Scottsdale PD.

All previous County talkgroups do in fact carry over, as is, to the new Thompson Peak system with the new frequencies. It's only Scottsdale PD that actually "changed" talkgroups, since although some of the frequencies in the new system are some of their old Scottsdale frequencies, SPD did in fact "change systems" regardless.

18000 is Adult Probation East
18032 is Adult Probation East Alt, sounds like an alternate to 18000.
17808 is Adult Probation West
17872 is Adult Probation Central (I believe 17968 is Central Alt, a little out of order)
18096 is in fact JPS (Juvenile Probation)
18192 is Adult Probation Tactical
18128 is in fact JPS Alt. (Sounds like a Tactical for JPS units)
17840 is West Alt.
18160 is the Probation Warrant Service channel
18064 is Adult Probation, Downtown Area

There's a few to maybe fill in some of your gaps. Much of it makes sense because with few exceptions, things fall in logical orders. i.e. Most agencies talkgroups are grouped together, a primary talkgroup is followed by an alternate, etc., so as you continue to listen, things quickly begin to fall into place. Especially helpful, of course, is when units refer to the channel they are on, or ask "do you copy on ..." ? Also helpful is scrolling through the channels in a deputy or other personell's radio for talkgroup names if they will let you have a look-see! :)

More to follow...

Mike,

I didn't understand what your message was replying to because I didn't see an original from Dan Danz today that discussed 123.1. Then I noticed Dan's messsage was dated last April. :)

Anyway, here's the federal regulation pertaining to 123.100. It doesn't really "belong" to CAP... it is a NTIA (National Telecommunications and Information Administration, a federal agency), but obviously the CAP is one of the primary users of the frequency, since they do most Search & Rescue operations (where S&R relates to downed aircraft, not like S&R in terms of a missing hiker stuck on a cliff with a broken ankle). Note that 122.9 can be used for S&R or training, but 123.1 for real S&R ops only.

CFR 47 Sec. 87.375 Frequencies.
(a) The frequency 123.100 MHz is available for assignment to aeronautical search and rescue stations for actual search and rescue missions. Each search and rescue station must be equipped to operate on this frequency. (b) The frequency 122.900 MHz is available for assignment to aeronautical search and rescue stations for organized search and rescue training and for practice search and rescue missions.

Dan Danz, 123.100 is likely more appropriate for your MCSO consoles now than ever, since it truly is back to being reserved for searching for downed aircraft, as opposed to helicopter chit chat daily. Mike is certainly right on that!

Dan Rollman

2128. Phoenix CAP patrols later today....

Topic: 2128 Message: 2128

Just read this and thought it might be good info to pass along even if you aren't a baseball fan.

The entire story is at this link:

http://azcentral.com/news/articles/breaking/1027ws-opener27.html

But a short excerpt is below:

-=-

It is a World Series like none other. It is the oldest vs. the newest, and the first championship sporting event since the Sept. 11 attacks. Major League Baseball asked the Diamondbacks to have a patriotic pre-game show. Nine-time Grammy nominee Vanessa Williams will sing the national anthem, and F-16s from Luke Air Force Base will fly over. Home run king Barry Bonds will throw out the first pitch.

Local merchants and hoteliers are salivating at a possible $20 million injection into the Valley economy from the Series.

Security efforts will be noticeable. It's likely that fighter jets will be flying combat air patrol over the Valley. The Phoenix Police Department's helicopter spent much of Friday circling the area around the ballpark, the only aircraft allowed near it.

City workers have been welding shut manhole covers near the ballpark, something normally done for a presidential visit, but done in this case as part of the city's overall security plan.

-=-

Those in the valley with scanners having the MilAir band might find some interesting listening later this afternoon....

I'll be at the ballpark so if anyone hears of anything interesting, please be sure to post it since I won't be able to monitor during the game.

John

2129. BOB and VHF

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-27 15:13:58 UTC
From: Michael Blackstock
Topic: 2129 Message: 2129

What would be the best frequencies to put in my scanner on the VHF band. I was about to get onto the roof and point my little beam in the direction of Phx.

I have the Southwest Frequency guide, but, there are so many frequencies to choose from. Does anyone know what will be the main repeater frequency for each department supporting tonight on VHF?

Thanks Michael

A couple of freqs I have are as follows:

BOB Security #1 - 456.4125
BOB Security #2 - 451.4125
Phoenix PD Channel #10 - 155.7600

A lot of security is handled by MCSO so it is probably going to be
digital. Phoenix PD does most of the "outside" stuff such as traffic
control. MCSO handles most of the inside security.

John

Is there an input freq. I need to monitor?

I seem to only get the dispatchers on all Phx. freq.

Here's something I just heard:

369.100 broadcast the National Anthem for the benefit of the pilots doing the flyover. I heard at least one jet go over my home here in Peoria, so I grabbed my PRO-43 which has Luke's channels programmed in. I immediately heard a snippet of the Anthem, and the question "Can you hear it alright?". The answer was "Hot Mike", then the anthem. I was watching something else, so started flipping tv channels, and caught the fly-over and the Phoenix FD and U.S. Marine flag raising recreations on the field. There were some comments about how good the fly-over looked, along with the critique that #4 was a little wide.

The time between hearing the jet(s) over my home and seeing them go over the BOB on tv, was less than 30 seconds. Not sure if it was the same aircraft or not. I may have heard a CAP flight go over. Just a cool coincidence. I may have caught them landing back at Luke afterwards. At least somebody was RTB.

Anyone have any CAP frequencies to post?

Phoenix PD VHF is all direct, no repeaters. You might try the UHF channels 450-4 to 450-7. 450-4 is active, mentions DPS is also there, but only hearing one officer, everyone else may be using talk-around.

Don't have a UHF beam. So, I will leave it on VHF.

I do here some people on 154.775 both sides.

CAP and CAP related can be heard on the following:

252.00 Strategy (WADS) with Barry or Berry-51 &-52 (Fighters) and Rubber-27(KC-135)
364.20 Rubber-27
265.40 Open Carrier - Occasionally
350.20 Strategy with Barry/Berry-51
132.50 Discrete frequency with ALB Center
321.30 Alley Cat (WADS related) with Barry/Berry-51

252 is referred to as Gold-6.
321.30 is referred to as Amber-6.
Have Quick is referred to as Aqua-20

Have fun,
John

2139. SCOTTSDALE PD INFO - New Scannerstuff Newsletter Issue Posted

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-28 09:55:49 UTC
From: Dan Rollman
Topic: 2139 Message: 2139

Hi folks,

Just wanted to let you all know, the November, 2001 issue of the
Scannerstuff
Newsletter is now available for viewing online by Newsletter Subscribers.
For information on the Newsletter Subscription Service, please see
http://www.scannerstuff.com/newsletter.htm

Please forward this email to anyone you believe may be interested in the
Scannerstuff Newsletter online.

Subscribers have access to the August, 2001 through January, 2002 issues as
well and all of the SWFD-6
updates contained in the 60-page "6th Edition Update" booklet (a $15 value
in itself!).

The new November issue includes 13 pages packed full of information,
all for Arizona:

-Six pages of information on the recent radio system change by Scottsdale
Police, including new Maricopa County trunked system frequencies and
talkgroups. <30> Scottsdale Police talkgroups, with their uses, are
included!

-Scottsdale Police beat maps and District boundaries
-New talkgroups for many Scottsdale city services on the new County system

-Tucson Airport Fire Department frequency change

-New LifeNet Medical Helicopters repeater frequency

-Frequencies for future City of Tucson Trunked radio system

-TIPS & TRICKS: Hear many Maricopa County Sheriff's Office "Hot" calls on a
special analog talkgroups on the county trunked radio system, even though
nearly all MCSO operations are now digital and cannot be monitored on
scanner currently available.

-SPECIAL FEATURE: Phoenix Police Department: Radio Designator / Patrol
Operations Overview
-Description of patrol and non-patrol designator structures, special squads,
etc.
-Beat Maps of all six Phoenix PD frequencies showing Precinct and Beat
boundaries, with radio frequencies on each map!

The Newsletter system is password-protected and available to current
subscribers. If you're interested in local updated scanner information,
tips, and feature articles, I encourage you to try out a 6-month

subscription for just
$3 a month. Click on http://www.scannerstuff.com/newsletter.htm . If you are a current Newsletter subscriber, please let your friends in the radio and public safety hobby know about the service!

As always, we appreciate your updated and corrected information. Scannerstuff puts a considerable amount of time into research and acquisition of information for our publications and especially these monthly newsletters, but information directly from scanner hobbyists and professionals is always appreciated! Please email you corrected and updated information to updates@.... For questions or comments on the Scannerstuff Newsletter service please email newsletter@....

Sincerely,
Dan Rollman

Hi John,

If there is nothing going on on the Statewide channel, they will use
it. If Statewide is being used they will likely use District One car to
car. I understand today, they were using CI 1 encrypted.

They are working in a small area right now with a lot of things going on so
they have to use what they can to try for a private freq.

Keith

Arizona DPS provides much of the staff for all events in the stadium.
As a matter of fact, they even provide the Command Staff for the game.

ASU PD is in the stadium as well, but they are typically busy handling
things on the campus that are outside of the stadium as well.

It's a joint effort in many ways.

Mike

Monday night, Tempe Fire had a hazmat situation; when they showed it on the news, they showed a truck backed up to the door of the hotel. That truck had what looked like a jet engine mounted on the back of it, and they were using it to de-fumigate the hotel.

What truck was that ??? That is, what's its callsign and what kind of truck is it? Rehab perhaps ?

That truck was "Vent-1" (but oh, the nicknames it's had!), which (contrary to its number) is housed at Station 6 just south of downtown Phoenix. I don't believe it is normally manned. One member of E6 crew takes it when necessary (which is relatively rare... way more so than Rehab-3 or Rehab-48 being used). Not sure what type of chasis, but the truck was built specifically to the ingenous specs of Phoenix FD for just the purposes you saw: Blowing smoke (or in this case, natural gas from the leaking pool heater) out of a large building, where portable exhaust fans would be significantly less effective.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-10-31 09:29:40 UTC
From: John H. Guetherman
Topic: 2146 Message: 2149

From the September-October 1999 edition (Volume 16, Number 5) of
"Fire Apparatus Journal":

"A most unusual vehicle built by Phoenix Fire mechanics is used for high-expansion foam and positive pressure ventilation. Vent 1 has a 60-inch diameter fan mounted in a 1991 Chevrolet flatbed. This unique vehicle has a maximum air output of 60,000 cubic feet per minute and is equipped with a Class A Foam-Pro foam injection system."

No mention of where it was stationed, so I'll take Dan's word that it's at station 6. A photo of it is included in the article, which is a profile of the Phoenix FD at the time of it's writing.

152.99 is a common frequency for business use and is most usually used for film and video production. Did you perhaps type in the wrong frequency here? Maybe you meant 156.99?

No actually listening to 152.990, which I usually hear Phelps-Doge Bagdad Fire Dept/EMS stuff. Definitely hearing EMS traffic & units in to Thunderbird (as in Samaritan) and dispatches to transports.

Just wondering...looks like PMT has a new system but this freq is in the FCC database as a mobile...not hearing anything on the repeater freqs...

regards, john

I think it's safe to say that they are just for public awareness.
That doesn't mean that a traffic unit isn't clocking your speed at
the same time though :)

Joke: I asked a motor unit if there was a way to beat a speeding
ticket. He said "Yes there is a sure way of beat a speeding
ticket ... don't speed."

Yep, that's what I'm hearing here in Peoria. Sounds like the dispatch is going out on 150.830 (159.990 input?) and the traffic is handled on 152.990. 155.160 (156.045 input) may be linked to 150.830 for dispatch as well, but very weak and barely readable here.

I was Westbound on I-10 from Ina Road just a few minutes after this incident occured, which was in the Eastbound lanes. There were vehicles stopped on both shoulders, in the median, on all the offramps, and at various fast food joints and gas stations over about a 15 miles stretch. The first few vehicles were pulled over just east of Avra Valley Road. At the time I went by, I'd say there were <30> vehicles stopped between Avra Valley and Ina just on the mainline, with many more at various places they found to pull off. Also, several 18-wheelers made it to the TTT truck stop before stopping with major tire damage.

DPS did find the vehicle responsible, and it appears his insurance information is being distributed to everyone who got a flat tire in early November in the Southwestern United States. :-) Quite a mess, but luckily, no injuries or 962's as a result, that I saw or heard anyway.

I work at AAA road side service.
We have 2 type of battery vans,
1 is owned by the contract tow stations and use the freq the tow
company
uses,
the other is a AAA owned fleet van and they use Nextel.

here are the freq.'s AAA is using to talk to contract tow stations.

Yellow 150.920 Tucson (200 units)

Purple 853.5375 Repeater in Phx area

Green 150.905 Mesa area

Blue 150.935 Scottsdale, N Phx

Red 150.965 Phoenix, Sun City

All communications and phones are handled at 3144 N 7th Ave, Phoenix,
Az 85013. Red can be heard near this address.

all tow contract companies use a company freq, UHF, VHF, 800, NEXTEL.
and AAA does not monitor these freq.'s.

--- In ArizonaScanner@y..., kjnc@p... wrote:
> The Thunderbird balloon classic is this weekend. What are the best
> frequencies to follow what's going on?

Ooops, sorry. I could have given you a few ideas of where to look.

151.625 Red Dot
151.700
151.805
151.895
151.955 Purple Dot
154.570 Blue Dot (Now MURS)
154.600 Green Dot (Now MURS)

Technically, MURS is not permitted in aircraft, so 151.820, 151.880, 151.940, 154.570, and 154.600 are off-limits to hot air balloons, blimps, hang-gliders, ultra lights, gliders and sailplanes, etc. However, .570 and .600 are still being used by balloon crews here, and most likely elsewhere as well.

I have heard balloon crews on all of the above frequencies in the area of Cave Creek and Jomax Rds., as I am a crew chief and student pilot on a balloon crew. We ourselves use CB ch. 32. I don't know what Westworld uses, or what the organizers would use. There are also a couple of airband channels specifically available for balloons and their chase crews to use for air-ground. 123.300 and 123.500 are available for ground support mobile stations. (i.e. chase crew vehicles.)

Did you go, and if so did you find the frequencies being used? By the way, it's no longer the Thunderbird balloon classic. It's the Metris balloon classic.

I had to work, otherwise probably would have gone for the glow, (as a spectator), which is always an awesome sight. Next one should be Glendale's Glitter and Glow in early January. In the past, organizers were using UHF itinerants I believe to co-ordinate things, and GPD was on channel Edward/TG 300-5, if I recall correctly. GFD and Southwest Ambulance were also there of course.

This is about the time that we (at the Sheriff's Office) got a call from a resident in the Wittman area about a strange v-shaped, dark-gray colored, aircraft that had circled his house 4 times.

Deputies in the area reported seeing a Stealth aircraft, and sure enough a few minutes later the comm center in the downtown area shook with the thunder of the B2 bomber that did a fly-by for the World Series ...

Awesome !!!

Ok, I thought I could figure this out on my own, but it just isn't happening. I found the frequencies on the bottom of this post, on the web. When I set the fleet map, I cannot tell how to set it. Is this Type 2 or does E1-P10 mean it's a type 1?
I have the freq.'s programmed & I have it set as Fleet Map:
B0 = S0
B1 = S0
B2 = S0
B3 = S0
B4 = S0
B5 = S0
B6 = S4
B7 = S4

When I hit scan, all I get are Talkgroups like:
11280?
03824? Scottsdale Airport?
01232?
03280?
18064?
01840?
But no Scottsdale PD...
Shouldn't I see talkgoups like 48, 80, 112, 144, 464, 176, 208, 496, 336, 1008
What am I doing wrong???
Thanks so much for any help!

Wow, that frequency list you found on the web is incredibly old and outdated (SPD recently made major changes, but that list is older still than that). Guess that's why people like me can still sell the Southwest Frequency Directory!

SPD is on a new set of frequencies, talkgroups, etc. The system is entirely Type II.

The very basics are as follows (for more in depth info, see further below):

Frequencies:

851.3375
852.7125
853.3625
853.5625
853.7625
854.3375
854.5875
857.2625
857.7625
857.8625
858.7625
859.2625
859.7625
860.2375
860.2625 <-- Data Channel
860.7625
860.9625

Some of the most important Talkgroups:

4208 1A South Dispatch
6640 1B Hot
4272 1C North Dispatch
4464 1D Info/Records
4432 1E Alternate

The November, 2001 issue of the Scannerstuff Newsletter online has some 30 more Scottsdale PD talkgroups, as well as new City of Scottsdale talkgroups for other agencies, in addition to Fountain Hills and other changes. The November, 2001 issue of the
Scannerstuff Newsletter is now available for viewing online by Newsletter Subscribers, and includes 6 pages of in depth information just for new Scottsdale PD info among its 13 pages.

For information on the Newsletter Subscription Service, please see
http://www.scannerstuff.com/newsletter.htm

Subscribers have access to the August, 2001 through January, 2002 issues as well and all of the SWFD-6 updates contained in the 60-page "6th Edition Update" booklet (a $15 value in itself!).

The new November issue includes 13 pages packed full of information, all for Arizona:

-Six pages of information on the recent radio system change by Scottsdale Police, including new Maricopa County trunked system frequencies and talkgroups. <30> Scottsdale Police talkgroups, with their uses, are included!

-Scottsdale Police beat maps and District boundaries
-New talkgroups for many Scottsdale city services on the new County system

-Tucson Airport Fire Department frequency change

-New LifeNet Medical Helicopters repeater frequency

-Frequencies for future City of Tucson Trunked radio system

-TIPS & TRICKS: Hear many Maricopa County Sheriff's Office "Hot" calls on a special analog talkgroups on the county trunked radio system, even though nearly all MCSO operations are now digital and cannot be monitored on scanner currently available.

-SPECIAL FEATURE: Phoenix Police Department: Radio Designator / Patrol Operations Overview
-Description of patrol and non-patrol designator structures, special squads, etc.
-Beat Maps of all six Phoenix PD frequencies showing Precinct and Beat boundaries, with radio frequencies on each map!

The Newsletter system is password-protected and available to current subscribers. If you're interested in local updated scanner information, tips, and feature articles, I encourage you to try out a 6-month subscription for just
$3 a month. Click on http://www.scannerstuff.com/newsletter.htm . If you are a current Newsletter subscriber, please let your friends in the radio and public safety hobby know about the service!

I have the freq.'s programmed & I have it set as Fleet Map:
B0 = S0
B1 = S0
B2 = S0
B3 = S0
B4 = S0
B5 = S0
B6 = S4
B7 = S4

When I hit scan, all I get are Talkgroups like:
11280?
03824? Scottsdale Airport?
01232?
03280?
18064?
01840?
But no Scottsdale PD...
Shouldn't I see talkgoups like 48, 80, 112, 144, 464, 176, 208, 496, 336, 1008
What am I doing wrong???
Thanks so much for any help!

2173. ADOT trunked system changes

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-07 22:51:10 UTC
From: walter.howard@juno.com
Topic: 2173 Message: 2173

The Arizona Department of Transportation is
upgrading their trunked radio system that
covers the metro Phoenix area.

By the time you read this, over 90% of the
subscriber units will have been reprogrammed
to "Type II" signalling.

This was necessary so that more consoles
could be added at the Traffic Operations Center.

This will mean that there are NO MORE FLEET MAPS
to worry about setting in your trunking scanner.

New consoles should be in operation by Thanksgiving.

As always;

Walter Howard
TeleComm Supervisor
Arizona Dept. of Public Safety
"Courteous Vigilance"
All opinions expressed are personal, NOT THE DEPARTMENT'S!

2174. scanner channels

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-11 20:24:52 UTC
From: Dean
Topic: 2174 Message: 2174

Hello everyone....Was wondering if there is anymore channels
that you can listen too the dispatch and the car .....Like
453.100 and 453.4500 or 453.200 if so please let me know...and also
if there is any channel for the air units??

2175. RE: [ArizonaScanner] scanner channels

It looks like you are asking about Phoenix PD.
All of the UHF channels have repeaters on them, which allows you to hear the dispatcher. Most of these channels however, never have a dispatcher on them. they are mostly used by vice and special ops units.
The SAU guys and QRT play on the UHF channels most of the time.
Many times when something is working they switch to the "b side" of their radio which is simplex.

Air units function on the regular VHF channels most of the time. You can also monitor 123.025 which is the air to air freq for the entire area. All helicopter monitor and transmit on this frequency. Phx PD has a "air company" frequency, however I never hear much on it.

Hope that helps

Mike

2177. RE: [ArizonaScanner] Re: scanner channels

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-11 21:01:49 UTC
From: Dan Rollman
Topic: 2174 Message: 2177

Dean,

A $200 budget should not keep you from enjoying the trunking systems around town (Tempe, Scottsdale, Chandler, Gilbert, Glendale, Surprise, Sky Harbor, Fountain Hills, etc.). You can get a Uniden BC245XLT (Currently Uniden's best handheld scanner) for around $200. For example, Communications Electronics has it for $189.95. See http://www.usascan.com/files/bc245.html. With shipping, should be just a few bucks over $200. The local stores (HRO, Bronco One, Apollo, etc.) all carry Uniden scanners as well, and may charge a little more for the convenience they offer, but for example, the BC245 is only $219 at Ham Radio Outlet on Dunlap.

And then there's always Radio Shack. But you won't find Uniden scanners at RS. Err, well, enough said there.

If you prefer a base model over a handheld, http://www.usascan.com/files/bc895.html has the Uniden BC895 (a great TrunkTracker scanner, just not quite as advanced as the new BC780) for $179.95.

Also take a look at http://www.uniden.com/docs/store/itemlist.cfm?cattype=prd&prodcatselect=3 for refurbished scanners directly from Uniden. The BC245XLT is only $176 on there, and their shipping is also lower than CEI, so that should keep it well under $200.

As for Phoenix PD, just to add to what Mike said, you are correct in that it is difficult to hear the mobile units on the VHF (150 MHz) frequencies for Phoenix PD, simply because they are simplex and not repeated. The chase channels (1 and 3, anyway) are "simulcasted" from VHF over to the UHF (450) frequencies you mention, and that's the reason you can hear both sides well. If there something happening in your area on one of the VHF precinct channels, you should hear both sides if the incident is close enough to you.

Remember also that many other agencies in town DO use repeaters for their regular operations, and so you can generally hear the mobile units on those better than on Phoenix PD precinct channels. Just a few of these agencies with repeaters and NOT trunked (don't need a TrunkTracker) include Mesa PD, DPS (Highway Patrol), Avondale, Goodyear, Peoria, etc.

See the Southwest Frequency Directory (http://www.scannerstuff.com/SWFD.htm) for more detailed information on frequencies for all these agencies. SWFD will also help you determine what agencies / channels are repeaters and which are not.

Dan Rollman

hey

Thanks Dan R. for the information but I am unable to open your QuickReferenceSheet.doc. My computer is old and cannot open your document. But I do have "Beyond Police Call" from Radio Slack. Can i get the channels from this book.

Also how does the phoenix motorcycle police get there information, like to check for warrants; sense they do not have an on board computer? I never hear them ask dispatch for information when I am close to them. Are they running on UHF or Trunk, for information?

From: notfun@msn.com
Topic: 2184 Message: 2184

Hello,

Everyone thanks for the help you have been giving me, but I still have some questions. I have figured out that the area I live in for Phoenix PD is 435. So when there is a unit in my area I can hear them and there call sign is (example 435 India, 435 George, or 435 Henry; etc.); what does the India, George, and Henry mean? I am assuming that a 35 unit of some sort is a sergeant. Also when I am within a couple of miles from a unit I can hear them loud and clear but when they are more than a couple of miles from me I cannot hear them and dispatch can; why is that(Repeater)? Finally, if there are two 435 George's how does dispatch know who is who of the two? Does the radios have some sort of encryption so that way dispatch can dispher the two?

Thanks Again,
Joshua B

2185. RE: [ArizonaScanner] More Help Needed for Phoenix PD

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-13 01:00:38 UTC
From: Michael Todd
Topic: 2184 Message: 2185

You really need to save up 15 bucks and buy the Southwest frequency
directory. Its the answer to all your questions!

Phx pd operates on a simplex system, so you can only hear the units when you
are close. Dispatch relies on very tall antennas (mostly at fire stations)
to relay radio transmissions to them.

The dispatcher comes off from south mountain or another tall mountain around
town. (depends on which part of town they are trying to reach).

Thus, if you are not close to the unit, you wont hear them.

Mike

OK, the callsign system is pretty simple. 435G (George) is a patrol officer assigned to the 435 beat. His sergeant is 43G. 43G supervises officers in all of the 43x beats. This is known as the 43 area. 43I or 43H are other supervisors for the 43 area, and their squads are based on the phonetic suffix. Area43 or Patrol43 is the daytime lieutenant assigned to your area. Patrol44 and Patrol45 are night lieutenants assigned to the 400 precinct. There are not two 435Gs, and no encryption on any of the dispatch channels.You should really listen to the WHOLE Phoenix PD system. You'll hear units switching over to other channels all over the place, especially those whose beats are close to precinct boundaries.

2187. Bagdad AZ MOA active

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-13 19:42:50 UTC
From: John G
Topic: 2187 Message: 2187

Bagdad AZ MOA active on 338.9 and 294.9. (1100-1236 Thu 11/13/01)

Appears 294.9 are the friendlies IDing as "Nickel 4-5" and 338.9 are the aggressors IDing as Nickel 1-3. Both groups common on 338.9.

Interesting to hear the different descriptions each group gives of their sorties...

Also appears Nickel 4 is British/Australian/New Zealand...the others of his flight also appear to have accents but too much quick keying...

Now appears leaving MOA - Nickel 4 group pushing to "Team Victor"...

73s John home for lunch in NoAZ

2192. Army/Air Force Exercise in AZ?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-15 02:15:11 UTC
From: FLANO
Topic: 2192 Message: 2192

Is there exercise that I missed in Arizona this week? I've heard BOOKSHELF coordinating strikes against ground targets on the 13th and 14th.

13 Nov

Sandy-2 - Flight of 4
Sandy-12

14 Nov

Zapper-31 - 41st ECS/EC-130H
Actor - 2 A-10's (prob DMAFB)
Aruba-13 - FAC
Lion-1
....-48

Targets were against Artillery, Trucks, and BRDM's in the area of UTM GQ720321. Does anyone have a UTM map and can you tell me where this is?

Unfortunately, this seems to be on a NORAD WADS freq, since that is all I'm scanning during the day, when I'm not here. I don't have it tied into my computer, so I don't know for sure what frequency this is taking place on.

Upon reviewing the recording, I hear this mixed in with the CAP activity that I'm looking for. At one point, someone was advised to check in on 255.40, the Flight Service Station frequency. At another point, BOOKSHELF identifies that he is up on 238.60mhz (NORAD freq), apparently not the frequency that I have this activity on.

Anyone else got anything on this?

Thanks,
John

2193. 265.4.....

2194. Free Southwest Frequency Directory booklet

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-15 05:39:04 UTC
From: Dan Rollman
Topic: 2194 Message: 2194

Hi folks,

Scannerstuff is currently running a special offer for ArizonaScanner list members. Purchase either the Southwest Frequency Directory 6th Edition on CD-ROM or the 400-page bound SWFD 6th Edition book direct from the publisher at www.scannerstuff.com and receive a FREE copy of the 60-page Phoenix Metro Guide/6th Edition Update booklet (a $15 value), with no additional shipping costs.

Key Benefits of SWFD-6 CD-ROM
Easy to use! Provided in Adobe Acrobate (.pdf) document format, the standard in document viewing!
Search for text strings, frequencies, cities, etc. and go straight to what you're looking for!
View the entire 400 page book right on the screen and avoid excessive paper!
Print a page, string of pages, or the entire 400 page document to take with you!
Browse! "Clickable" Index along left side of software product allow easy browsing from section to section!

Just go to www.scannerstuff.com and click the "Add to Cart" button next to either "SWFD-6 CD-ROM" or "SWFD-6 Book". Complete your online order for the SWFD-6 CD-ROM or bound book, using a credit card or E-Check (via PayPal) for just $30. You'll receive both the CD-ROM or book you ordered, as well as the Metro Guide/Update Booklet by mail, shipped within 24 hours. Offer valid for purchases placed on or after Wednesday, November 15 from www.scannerstuff.com, and only for a limited time.

Email sales@... for further information and questions.

Regards,
Dan Rollman

From: Tracy
Topic: 2193 Message: 2195

There have been some problems with radio interferance from Mexican stations in the air band. One suspected cause was from some of the TETRAPOL systems they have been installed just over the boarder.

I can't seem to find the article about this but it was this past summer.

From: notfun@msn.com
Topic: 2196 Message: 2196

Hey,

I know I need to get the Southwest Frequency Directory 6th Edition, but until I get some funds (College Student-Criminal Justice Major), I will be posting many messages. First, DPS District 6 (460.025) Casa Grande area, officers call signs is 600 for the lieutenant; 610, 620, and 630 is the sergeants, and everything in between are the officers. In the past couple of days, I have been hearing officer put an Y (young) at the end of their call signs (example 616Young or 629Young). What does the Y (young) stand for? Second, What is the DPS Car to Car Frequency for district 13 Metro east and district 6?

Thanks Again.

Topic: 2197 Message: 2197

Thank you John and Tracy for checking/investigating the freq. I
just tuned in again (0535) and it is still there! I find it rather odd
that it seems to have just "popped up" in the last 36 hrs or so!
Recap:... the other night (Tuesday evening) while I was listening
to the operations in the Tombstone MOA, I also had the NORAD freqs in the
scan list.... no hits on the NORAD freqs, prior to, or after, the ships
left the area... but last night, at around 2000 hrs I sat down and
started to listen to the MOA's and the NORAD freqs, and there it was!
Tracy, you mentioned "interference on the Military air bands"
from some of the TETRA systems that were installed south of the
border.... while I am no expert on Mexican radio systems/infrastructures,
I am aware that the VHF (150-160 mhz) band is still the band of choice
for the Mexican authorities along the border area! The closest border
town to my QTH (approx 25 miles as the crow flies) is Naco, which is
approx half way between Nogales and Agua Prieta (Douglas)... Naco is a
"wide spot in the road" compared to either of these 2 towns!!! To my
knowledge, all 3 of these places are using conventional VHF for their
public safety, federal ect. communications. I don't know!!... like I said
last night.... "Lucy, you got some 'splaining to do!".....

From: Tim Bennett
Topic: 2194 Message: 2199

I am a member of several Yahoo listgroups, and none of the moderators spam me. I am "web access only" to all of them because I don't want the emails. I received this spam as a direct email however. I really don't like spam from a listgroup and in general report it to the moderator immediately. The response from the moderators in all cases where I've done this has been to ban the spammer. So far, all the lists I belong to have a zero tolerance policy on spam. Since it appears as though in this case the spammer is the moderator, I doubt I will receive that usual response in this case.

I am perfectly capable of removing myself from the listgroup. Are you capable of not spamming my email?

So... That leaves me with one final question:

Is this a list that tolerates; no make that "promotes", spam?

I may be talking out of turn here, but esentially you have joined a list
that is run by author of the book that was advertised.
Dan passes on special information and pricing to this list as a favor for
all of the information that this lists provides him

You are the first to complain about such "spam" as you call it.
I would suggest that if you dont like what you are seeing on a list, its
time to remove yourself from that group.

Nobody here will fault you for not liking the list. People have come and a
very few have left. If the group is not for you, none of us will be
offended.

It's not like the owner of this "spammed" something that was completely off
the topic of the list. It's actually the backbone of the list in my opinion.

I hope you find satisfaction in your other lists.

Mike

Mike,

I appreciate your perspective. I have enjoyed this list in lurk mode for about a year and this is the first time I received an unsolicited, direct email from any of my lists. I join these as web only because, as must be obvious. I don't appreciate unsolicited, direct emails ;-].

Several of the other lists that I enjoy are very similar in that a vendor owns them, but they haven't sent me unsolicited, direct email of *any* nature. Maybe I'm not using the right definitions here, but I've always considered unsolicited, direct email of commercial nature to be termed "spam".

I might suggest that I am the first because this is the first time one was sent and I have a greater sensitivity to spam, but I could be wrong. It certainly is the first one that was sent since I joined this group a year ago.

Thanks again for your perspective. I hope at least some of you, and the list owner, can appreciate mine.

Later,

Tim

2203. RE: [ArizonaScanner] Re: Free Southwest Frequency Directory booklet

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-15 21:13:15 UTC
From: Dan Rollman
Topic: 2194 Message: 2203

Tim,

I responded very kindly, I thought, to your derogatory personal email earlier you sent this morning advising that you didn't want to see "spam" and telling me things like "get lost and don't come back" (see below). I replied nicely telling you that the information was on topic, and was part of the basic purpose of this list (scanner frequency information for Arizona). It is even in the description of the list itself on the Yahoo!Groups website. Scannerstuff created and operates the ArizonaScanner list, and we use the same email list for ArizonaScanner general discussion and the occassional Scannerstuff information email you received (have you received more than 2 in the past year?). I thought I explained this all to you in our private emails this morning, but since you reverted to the entire list itself, I'll clear things up for you right here.

In response to your question regarding not "spamming" you, no, I am not capable of keeping you on the Scannerstuff email list (which is, ArizonaScanner) but selecting what emails you'll receive as a result of your subscription to Scannerstuff's list and not sending you others. In response to your last question, this list not only tolerates but encourages everyone to post relevant, scanner frequency and public safety related information that deals directly with hobbyists in and around Arizona. Though general for-sale posts of radio equipment that is not particular to Arizona has never been within the scope of the lists description, anyone who cares to inform local hobbyists of Arizona-targeted radio related specials may not be aware of (even local, non-national-chain store radio specials they find) is free to use this list as a forum to do so. SPAM, as it is defined (unsolicted email of an irrelevant nature) will not be tolerated, and never has been.

Tim, you've been a member of ArizonaScanner for nearly a year now, and you've never posted anything to the list, much less anything of relevance. I wholeheartedly encourage hobbyists to subscribe to ArizonaScanner even if they want only to gain from the information by receiving the quality information that flows across the list and not provide information to others by themselves sharing on the list. However, I will not tolerate someone who has absolutely no participation in the list whatsoever except to take what they can gain from others and giving nothing in return, from trying to recreate the subject of the list and publicly seek certain types of relevant emails and not others. This includes seeking to absorb the information from the 1000+ messages a year on the list that Scannerstuff created and monitors, without any personal contribution yourself, but trying to opt out of the 2-3 emails a year that contain relevant special offers and information from the host of the list. Scannerstuff keeps one email list. If you want the 1000+ emails on the list, you will receive a few on-topic messages a year from Scannerstuff. It is absolutely astonishing to me that

you can remain in "lurk mode" as you put it for a year, and then burst from the shadows only to publicly complain about a related email you yourself acknowledge comes no more than a few times a year (since you've never got one before, in your nearly a year of subscription to our list).

I have not received any other complaints at all. Despite my respect for your holding your own oppinion, that combined with the incredible number of orders today make clear that the unusual stiffness you hold in your oppinion of what type of scanner-related emails constitute spam make your view clearly the minority.

Have a nice afternoon, and should you run into any trouble at all unsubscribing (if you elect to, based on the long-standing purpose of this list), please don't hesitate to email me privately for assistance at list-owner@....

So with all that said, and despite not first having Tom Bennet's approval, the offer for the free booklet at www.scannerstuff.com stands!

Thanks everyone (else) for all your continued support and contributions to this wonderful email community!

Dan Rollman
Scannerstuff owner / List Operator

Subject: [ArizonaScanner] Re: Free Southwest Frequency Directory booklet

I am a member of several Yahoo listgroups, and none of the moderators spam me. I am "web access only" to all of them because I don't want the emails.
I received this spam as a direct email however. I really don't like spam from a listgroup and in general report it to the moderator immediately. The
response from the moderators in all cases where I've done this has been to ban the spammer. So far, all the lists I belong to have a zero tolerance policy on spam. Since it appears as though in this case the spammer is the
moderator, I doubt I will receive that usual response in this case.

I am perfectly capable of removing myself from the listgroup. Are you capable of not spamming my email?

So... That leaves me with one final question:

Is this a list that tolerates; no make that "promotes", spam?

Tim

KEDJ comes back to 103.9, and there is a music-station active on that frequency in the Valley, though I am not sure it's letters remain KEDJ.

Permit me to make an observation or two:

I, for one, consider some advertising from you as a small price to pay for the considerable service you perform for the scanner community in Arizona. It did NOT bother me a bit.

However, if you, Dan, had POSTED the information instead of direct e-mailing it, then Tom or Tim or whatever his name is, would probably not have been so incensed, because he would not have received it directly in the mail. This is precisely what any other vendor, who does not have direct access to the mailing list contents, would have had to do.

Just a thought for possibly avoiding acrimony in the future.

Keep up the flow of information.

Thanks Dan,

I'll keep that in mind. Respectful suggestions from members like you who at least occassionaly give something back are always appreciated. Thom failed to make any such connection in his "get lost" rantings to my private email this morning.

Part of the problem with announcement emails directly on the list is that there are a sizeable number of people who are subscribed to this list in the "Annoucement Only" mode. The reason, is because they are interested only in the occassional announcements directly from Scannerstuff, and not the daily conversation on the list. Apparently the opposite of Tom's interest. This is the reason the the email was sent to the specific addresses of all members, so as to include these people. Additionally, sending it directly allows anyone with questions or wanting further information to easily click "reply" and ask questions directly of me, without having to rack up yet more email that people like Tom would have to skip over on the list, or find and change the email address manually in their reply. It was just simplicity, so as to avoid extra unnecessary email on the list itself. I've received quite a bit of reply email from people excited about the offer, and those are the emails that were kept off the list by sending directly and having the "reply to" be me, instead of the list.

I'll further research the "Accouncement Only" mode in Yahoo!Groups and see what I can figure out.

Dan

I will second Dan's comments 100% on this one. I have been a member of this list for some time as well and have no problems whatsoever in the list owner sending out a relavent announcement to the list members. It is HIS list to do WHATEVER he wants to do with. If he sent tons of adds out that might be another story, but 1-2 a year is not too much to tollerate. Have you never heard of the delete key, it takes mere seconds to use and it does wonders for email that you do not wish to see. You might even select to filter posts from Dan out of your mailbox, but you should understand that if you do then you will be counting yourself out of page after page of very usefull information that is related to the topic of radio scanners. Dan Rollman has been a MAJOR contributor to the radio scanning hobby here in Arizona for more than 10 years, have you?

I for one would not have blamed Dan for just booting you off of the list and to have been done with the likes of your kind, but as Dan has showN many times over the years he has shown he can let it pass and has not booted you.

2209. RE: [ArizonaScanner] DPS Info.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-16 07:56:03 UTC
From: Keith Kyer
Topic: 2196 Message: 2209

Hi Joshua,

The young designation means that the officer is going to court that day. It may chance at the first of the year. Sam designation means special detail, Union means unavailable but in their patrol vehicle, Xray means this unit is the acting supervisor, Tom means the unit is part of a federally funded speed detail.

The car to car frequency that you are looking for is the same as the frequency for that district, 460.625 would be the car to car or Talk Around Channel for District 6. The way they go from TAC to Repeater is just to lower the output on their radios.

Hope all this helps, you in the long run. My wife works for DPS so I can help you on those questions easier then some of the other ones :)

Correct but incorrect. True, the car-to-car frequency is the same. But they don't change the output of the radio. Instead of transmitting on the repeater input (465.625), they're talking on the repeater output. They are using simplex to bypass the repeater. It is line-of-sight only, but if you have a decent antenna, you can hear DPS units all over the state chit-chatting on simplex. Right after "3E70 10-19 with 71 and 72," you'll hear, "Mike, turn off your wig-wags, you're blinding the crap out of me" followed by "OK, sorry boss."

I heard is last night from NW Tucson. Full quieting and steady. Doesn't sound like any sort of intermod. Tried it from U of A with handheld and didn't hear a thing. I'll check again when I get home.

Since it is so clean, I wonder if this is some sort of re-broadcast. A ex-sub sailor I used to work with told me there were at least a couple of circuits that were up 24X7 with any programming they could beg, borrow, or, more likely, steal. Ballgames, soap operas, TV audio, whatever - but continuous. If programming and/or carrier dropped for more than some given period of time; this constituted an alert message of some sort.

It would be fun to track this puppy down, but I don't have any type of directonal antenna.

Jim

I agree with the frequency .. but not about lowering the output of their radio.

I don't know with 100% certainty, but based on what I hear scanning, and knowing how MCSO's old Motorola UHF radio's work, I suspect that the mobile unit
switches from transmitting on the repeater input frequency to transmitting
on the repeater output frequency. On the Motorla control head, it's called "DIR"
or direct. The other mobiles are listening to that frequency already, and
the only drawback is that the repeater output will
occasionally stomp on the car-to-car traffic. Since I'm a dispatcher, I think
That's the way things oughta work, anyway -- the dispatcher should have priority.
In this mode, the unit's low power transmitter is not repeated by the high-power
repeater, so you might think that they lower the output, unless you're fairly
close to the unit. You might not be able to hear the unit at all, or will
hear only half of the conversation because you're close to one unit and not the
other. But that's okay - because, in most cases, they just want to talk to a
unit next to them, not somebody in another county.

Believe you me, it's a heckuva lot better than a simplex setup, like Phoenix PD,
or a trunking system like MCSO, where the unit has to bother the dispatcher and
all of the other units to get any other units he wants to talk to switch channels
or talkgroups to one reserved for car-to-car traffic. And, when they're "over
there", they usually can't hear traffic on their main channel.

They don't just talk about code 7's or donuts when they go car-to-car, either.

The ability to RAPIDLY communicate with other units in a critical situation is
crucial to officer and public safety. "You take the back, I'll get the front."
"Watch out, she just stuck a knife in her purse." "He's comin' out the back
door." "A driver just busted thru my barricade and is headed for you at the scene."
It's one reason why, if we know ahead of time, we'll move critical incidents to a
repeated tactical channel or talkgroup so that they CAN quickly communicate
with each other without getting permission first. And, because it's repeated,
the dispatcher doesn't have to manually repeat (like Phoenix must do) to ensure that
all interested units hear the traffic.

But, for quickly talking to the guy next to you, I've of some officers who bought some
new cheap FRS radios and used them to communicate among themselves.

Tetrapol is an offshoot of TETRA, a trunking and modulation
standard used by public safety in England and a number of E.U. countries.
Interference is not decipherable by a standard scanner as it's DIGITAL.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-16 23:03:52 UTC
From: walter.howard@juno.com
Topic: 2196 Message: 2216

Sorry guys, I missed the opening salvo on this.

DPS radios have a "DIR" button that changes the Transmit between the 465
and 460 frequencies.
If we've done our job correctly, the power doesn't change.

It's setup this way so that everyone LISTENs to the same channel, but you
alternate between
Transmitting to the dispatcher/repeater or directly to another car.

As to priority, if someone's transmitting car-car, they ain't listening.
And the dispatcher can be over-ridden by a nearby mobile.

From: ravenfalls@aol.com
Topic: 2218 Message: 2218

Hello all, There is a new Internet Relay Linking Project (IRLP) node in the Phoenix area on 147.460 simplex PL 151.4 This node can connect to any other node in North America, Australia, Antarctica & Europe. The node is open and free for all licensed amateur radio operators. The clarity is like a phone call. If you want to hear some distant states or countries, listen in. 147.460 is located in North Glendale on a 55' tower emitting 50 watts. It does have a good signal over most of the area some but distant stations might need a good outside antenna to hear it. Below is a webpage with maps and node #'s & locations. IRLP Node Information (http://www.ipass.net/~jimprice/irlp/) IRLP General Info (http://www.irlp.net/) Joe [Non-text portions of this message have been removed]

2219. BC295XLT Question

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-19 21:47:08 UTC
From: Nick
Topic: 2219 Message: 2219

Hi all:

I'm having a problem with my BC295XLT Trunk Tracker, and wanted to see if anyone else has had this problem - not sure if it is
fixable, or if the scanner has a problem requiring repair.

I usually monitor Scottsdale PD, and the scanner is mobile mounted, with a standard Radio Shack mag mount scanner antenna. This
setup has worked fine for months, although this problem has occured in the past, and just as mysteriously as it appeared, it
went away.

The scanner will be scanning the different call groups just fine, then it will stop scanning, and hang on a call group (not any
specific one, either), much the same as if I had pressed the "hold" button. I realize that squelch control is set during trunk
programming (automatically?), so I've actually gone in and reprogrammed the trunk list three times now. By setting the squelch
as far counter-clockwise as possible, it will scan about 70% of the time, but still hangs. Once it hangs, you can punch the
"search" button, and it will scan again, until it hangs again, which, on a busy system like Scottsdale, is pretty darn fast. If
the trunk is programmed and the squelch is set further clockwise (say, about middle position), it will hang on every single
transmission. Switching antennae doesn't seem to mke a difference, either.

BTW, I also use a BC895XLT on my desk, and it has never had this problem.

I'm thinking the unit has gone defective, and will probably just replace it (it is about 3 years old) rather than repair it,
unless someone knows a fix for this problem. After all, a scanner that doesn't scan isn't particularly useful.

Thanks in advance,

Nick

2220. AZ CAP - Over Meteor Crater Area -

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-20 18:08:05 UTC
From: FLANO
Topic: 2220 Message: 2220

Hello all :)

Cats-41 and Cats-42 (162nd FW ANG) active in CAP over northern Arizona in the area of 3507N 011359W looking for "Bubble Boy". This appears to be a real target as Cats-41 asked if he could "Grave Robert" them. When he was advised he could not, then he asked to "Llama" them. "Bubble Boy" was at 32,000-35,000 feet. Cats-41 made a visual ID on the aircraft and was following them into a heading of 260.

252mhz Bigfoot (WADS) with Cats-41 and -42
321.30mhz Bigfoot (WADS), Noble Eagle-1, with Cats-41 and -42 (This is the active frequency for the flight following.)

I only picked up parts of the transmissions from here, SE of Tucson.
Anyone else get any of this?

John

2221. RE: AZ CAP - Over Meteor Crater Area - Active Response to Aircraft

Date: 2001-11-20 18:23:12 UTC
From: FLANO
Topic: 2220 Message: 2221

Cats-41 advised that his Alpha Check to 3507N 011359W was 292 for 173.

Cat-41 advised Noble Eagle-1 that he had visual contact with the Pilot in cockpit. He advised that the aircraft is not responding to flares or ?ICAA? signals. The aircraft was at FL310, turning to the left at heading 260 at 10:50MST.

That was the last I've heard of them.

I've totally forgotten the correct acronym for ?ICAA? signals - sounds like "EYE KAY AH." Can someone remind me of the proper acronym :)

Thanks,
John

Bob :)

Thanks, that's it! I went to the FAA site and looked up the FAA Acronyms and low and behold it's there. I just had a temporary lapse for the proper acronym. I knew it was some motion action taken by the interceptor aircraft, but my read on this was pretty scratchy with the distance between him and me, considering that it was UHF and all :)

Thanks again for your help.
John

I believe you are hearing the CAP crews refer to the "ICAO signals" -- a series of motions made by the intercepting aircraft to inform/warn the "target" that he is being intercepted, and to communicate to the pilot what action is to be taken (i.e. - follow me, descend, land here, etc.). These internationally-recognized signals were set up by the International Civil Aviation Organization a long time ago; a lot of folks in aviation-related fields pronounce "ICAO" as "Eye Kow". If you are really curious about the signals, look at any copy of the U.S. Aeronautical Information Manual under "National Security and Interception Procedures".

David :)

Sure thing. Today, a couple of our boys from the AZ Air National Guard, the 162nd Fighter Wing, flying F-16's reacted to an unidentified aircraft over the Meteor Crater area of Arizona. Normally, this stuff is pretty hum drum and routine, pattern flying, with occasional aerial refueling from a KC-135.

Normally, they are active with BIGFOOT on either 252 or 271mhz. BIGFOOT is the call sign for the NORAD Western Air Defense Sector (WADS) controller. Aside, from routine communications checks on different NORAD frequencies, usually referred to by a color and suffix (i.e. Amber-6), they fly circuits until told to go home.

Today, it was a little different. They were sent after a target right away, hence the name CAP or Combat Air Patrol. Today they used some unique coverterms, which until today, I had not heard. So far, all those that have responded to my postings have not heard it either.

Since the 11th of September, new guidelines are in place for air traffic controllers and the USAF. Part of that appears to be some type of a liaison at the ARTCC's with the callsign of ALLEY CAT. Based upon postings that I have seen on other military specific groups, this is the callsign used across much of the U.S., if not all. Normally, our AZ CAP only conduct a communications check with ALLEY CAT.

Today, they took direction from callsign NOBLE EAGLE-1 on 321.3mhz. This appears to be a higher authority within NORAD. NOBLE EAGLE-1 directed the F-16 pilot towards the aircarft that was to be identified. Making it more interesting was the fact that the F-16 pilot attempted to make visual contact with the pilot of the other aircraft. He used flares and signaled with his aircraft, using ICAO (International Civil Aviation Organization) signals. These can include wiggling the wings, turning on specific colored lights on the intercepting aircraft, just to name a couple. The other aircraft did not react for quite a while, considering the F-16 was sitting right off of the aircraft.

Unfortunately, this is where the story ends for me, as I lost the signal on these guys, probably as they were descending with this aircraft.

Clear as mud? I hope it makes some sense. For me it was exciting, as it normally is quite the routine.

John

2227. Re: AZ CAP - Over Meteor Crater Area -

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-21 06:55:07 UTC
From: Tracy
Topic: 2224 Message: 2227

I had heard a reference to NOBLE EAGLE ONE in the LA area on the same day but it sounded more like a training excersize. One pilot said to another pilot that NOBLE EAGLE ONE was a female. They were using the PARADISE (Riverside) VOR radials for navigation. After the exercise they decended (probably going back to base) so I could not hear them any longer. This was on 138.225 and they also mentioned 277.4 which is ZLA Sector 30 Control but I didn't hear them on the VHF side 119.95. I still don't have a MilAir scanner so could not monitor 277.4. Most of the conversations were difficult to monitor since they were so far away from my location.

2228. Mesa PD/FIRE

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-21 07:52:57 UTC
From: Tracy
Topic: 2228 Message: 2228

I'm heading to Mesa for turkey day and wanted to know if they have switched over to digital yet.

Another question: I understand that the air museum at Falcon Field was going to move to Seattle. Has this happened yet or is the museum still operating?

Any other frequencies of interest to monitor there? I normally just monitor police/fire when I'm there but that might have changed if they are now digital :(

Thanks!

Tracy

2229. 453 MHz Info Request

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-11-21 11:24:15 UTC
From: John H. Guetherman
Topic: 2229 Message: 2229

I'd like to get info on who uses several frequencies within the 453 MHz band, in the metro Phoenix area, which I can't seem to find in the SWFD. Here's the list I'd like to have confirmed:

453.025
453.075
453.125
453.150
453.175
453.225
453.300
453.325
453.375
453.400
453.425
453.475
453.550
453.700
453.750
453.775
453.925

I know a couple of the first ones are now EMSCOM up in Prescott, and I believe at least one of them is copyable here, but not sure who it is. Sounds kinda laid back, possibly senior citizens, moving a few units around from what little I have heard. Volunteer ambulance perhaps? (Their voices "sound" much the same as the Sun City and Sun City West Sheriff's Posse do. All of which are senior citizens, with maybe a few exceptions. No insult intended, I can simply get a general idea of a person's age by the sound of their voice: young, adult, or senior citizen.)

Thanks for any help.

To: ArizonaScanner@yahoogroups.com
Subject: [ArizonaScanner] Mesa PD/FIRE

I'm heading to Mesa for turkey day and wanted to know if they have
switched over to digital yet.

Another question: I understand that the air museum at Falcon Field
was going to move to Seattle. Has this happened yet or is the museum
still operating?

Any other frequencies of interest to monitor there? I normally just
monitor police/fire when I'm there but that might have changed if
they are now digital :(

Thanks!

Tracy

David,

I just uploaded a document that will give you an idea of some of the terminology and acronyms used by the U.S. Military. It does not cover everything, like some of the terms that I mentioned from the CAP flight on 20 November, but it will give you a very good idea of what you are hearing.

Thanks,
John

From: John H. Guetherman
Topic: 2233 Message: 2233

From the 800band@yahoogroups:

Motorola announced that it's shipping the latest version of its line of digital radios--the Internet protocol-based (IP) ASTRO 25 system and XTS 500 and XTS 2500 radios that operate in the 800, 821 and 700 MHz public safety bands. According to the company, the systems will provide, "increased coverage, seamless communications and new services, including integrated voice and data as well as connectivity to an agency's existing IT infrastructure." The system uses digital IP packets to route voice transmissions and is, the company said, "more efficient and cost effective." Customers for the new line include the states of Minnesota, Michigan and Colorado, and the cities and counties of Hamilton County (Ohio); Phoenix, Gilbert and Mesa (Ariz.); and Austin and Travis County (Tex.).

Tracy,
Kinda strange. Not sure if that database at phreak.org somehow has the FCC data modified by an individual, but 453.025 is actually licensed to "Arizona, State of"... not specifically to DPS. In fact, it is one of the newer EMSCOM repeaters (state EMS radio network), not a law enforcement or highway patrol use.

A few of the others I looked up real quick in the Southwest Frequency Directory CD-ROM and some other notes I have.

453.225 is Mesa City Sanitation Department
453.425 is the Mesa City Radio Shop / Comm Tech's
453.475 is Mesa City "Base 2", Natural Gas Service
453.550 is ASU Facilities Management department

John,
Which is the one you are hearing the senior citizens on?

Dan

Date: 2001-11-22 10:00:11 UTC
From: Tracy
Topic: 2229 Message: 2236

This is the problem with the FCC Database (for radio monitoring hobbyists anyway) .. frequencies are licensed to the an entity and the license do not have to contain which department within that entity it is used for. DPS is a state agency so the license is for the state of Arizona.

I've checked the PHREAK database against some searchs of the actual FCC database and they are the same in all cases I've tested.

There are many factors that might return something strange from searchs on the FCC Database. An example would be a state frequency that us used for mutual aid. You will find not only the state of Arizona as a licence holder of that frequecy but several other county and city agencies as well.

Clear as mud? It get worse...

Also keep in mind that RF licenses are geographical so there may be several entities that are licensed with the same frequency in different geographical locations.

There also tends to be some repeatition. For example. A travelers information station run by the State of Arizona might be licensed both through the State and through the private company that installs and/or maintains the station.

Yep,

There are quite a few limitations to FCC data, which is why edited guides
are a great tool. But it's also important not to assume to much into FCC
data as well. I.E. a "public-safety-looking" frequency licensed to the State
of Arizona is not automatically DPS or Highway Patrol, so I'm perplexed
why that "phreak" database would have data different from the true FCC licenses,
unless it was edited by someone who had a hunch about the users. Editing
FCC data without specific knowledge of the user is a slippery slope. But
man genuine FCC data is a powerful tool!

Have a Happy Thanksgiving, everyone... And Tracy, enjoy your time in Mesa!
A good trick if you enjoy monitoring only the "good stuff" in Mesa/Gilbert
and not hearing the routine calls... Just keep a radio on Mesa FD Ch2 (154.235)
and lock out Ch1 (Dispatches) and Ch3 (routine traffic) and you'll hear
only the big incidents (structure fires, "2-1 Medicals" which is a medical
call with multiple serious patients, etc.)

Not that I'm trying to discourage you from listening to everything else.
:) But I keep a radio on Mesa Ch2 even when I'm not scanning other things!
If you enjoy good fireground traffic, it's one of the best channels in town.

Dan

Dan :)

What time did you year the traffic on 138.675? I have been trying to find the CAP's VHF air-to-air chatter freq. Maybe you found it. They were active 12:44 and 14:27, at least. They were active on 271mhz, but then switched over to Have Quick. They had a KC-135 up there with them, so past here says that they were flying in the Phoenix area, normally about 20 miles to the west. I just heard them clip through on Have Quick, so they're still up.

271mhz Bigfoot (WADS) with CATS-41 and 42 (F-16's) and Rubber-27 (KC-135).

543.300/458.300 is a "community repeater" for small state agencies,
on White Tanks Mtn.
We refer to it as "Shared Arizona Government Operations Radio" (SAGOR).

Any state agency can get on it without a lot of hassle. Strictly
NON-public safety.

453.025, 453.075, 453.125, and 453.175 are Med 11, 12, 13, and 15 for
statewide EMSCOMM.

From: Tracy
Topic: 2229 Message: 2244

I don't think they edit the data from the raw FCC database other than deleting most of the fields which they don't use (Like the number of units, power output, etc..). They update the database often so I suspect that they simply download the database every so often to keep it up to date. From licenses I've searched in my neck of the woods I've not found anything different than what the FCC database lists anyway.

My vacation in Mesa was great but I didn't find much time to monitor the scanner. I paid a visit to the Champlin Air Museum and enjoyed that very much. It seems no matter how many times I visit that museum I find something new. FYI: The museum will be moving to Seattle in December 2003 :(

We had some time to kill at the airport waiting for our flight home so I spent some time monitoring their TRS. I also took some photos of the security guards at security check point "Bravo" which I suspect caused them to "randomly" select my wife and I for searches prior to boarding the aircraft. I jokingly told the gal who performed the search that "I've been looking forward to the full body search." .. she took it well and we had a great time talking with her as she searched every crevice and cranny LOL.

Nothing exciting was heard while I was there. There was a woman who had lost her seeing eye dog (She left the poor mutt on the bus), a woman who had been given a parking ticket was detained while the police talked with her (and probably gave her a littering ticket) and someone had vandalized a conveor.

Here are the talk groups I found while waiting for my flight:

Oscar = Operations
Tango = Tow truck(s)

01-012 Oscar units
"Paul 12" patroling around the tarmac

01-021 Parking

01-042 Maintenace
"316, skyharbor. Low battery alarm on American West tower" a phone number with an 480 area code was given.

01-062 Police heard on the tarmac

01-063 Security and Operations

01-065 Ops 20
Oscar 20, 75
Tango 1 (Tow truck)
Sky harbor to "Doors & Conveyors". Northern Conveyors asked
for the police to take a vandalizm report.

01-071 Oscar 20 and security in terminal 4

From: FLANO
Topic: 2245 Message: 2245

AZ CAP is up.

CATS-41 and -42 with BIGFOOT on 271mhz/Blue-15

CATS-42 spoke with "ALLEY CAT Albuquerque" on 321.3mhz/Amber-6.

I was able to confirm that the CAP are indeed using 138.675mhz as their Victor freq. I heard a little exchange about not being able to reach BIGFOOT and that they spoke with ALLEY CAT.

Dan :)

Great catch on 138.675mhz. I heard CATS-42, the CAP aircraft for today, chatting about BIGFOOT and ALLEY CAT on this frequency before they departed the Tucson area. I think this would be safe to say that the 162nd FW uses this one.

Thanks again for a great tip,
John

Hello Again,

I have a BC 245XLT scanner and I was wondering if anyone has
the "SmartScanner" software. I am unable to download this from
Uniden's web site so if you could send it to me as an attachment.
Also does the software let you type in frequencies to send to the
scanner via interface or do I need to purchase a third part
software? In addition, what are the benefits of using the computer
interface and software? Now, I only listen to DPS Districts 6 and
Metro 13, and Phoenix PD channel 4, so would these features be useful
to me or is it irrelevant.

Thanks,
Joshua B.

453.175 sounds like security operations at a medical complex. "Base" asked someone to go unlock the doctor's lounge, and I also heard a radio check. This time "Base" was a female, but was not a senior as far as I could tell. I don't believe the other two male voices were either.

If I hear anymore I'll let you know.

2258. 700MHz

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-02 19:29:16 UTC
From: openhighways@aol.com
Topic: 2258 Message: 2258

Will we averge joes be able to monitor these new 700MHz radios being ordered from motorola assuming they are analog and not digital or will the agencies receiving the equipment be going to digital. I recall reading somewhere that the Phoenix Fire Department was not interested in 800MHz digital systems citing interference problems from Nextel and other providers. They were interested in the 700MHz systems but the article didn't say if they were staying analog or going digital. Anyway, I've got the 780xlt and I'm not sure it would even be capable of following 700MHz trunked systems.

From: Keith Kyer
Topic: 2259 Message: 2260

Hi Joshua,

I can at least answer the questions you asked about DPS, not sure about Phoenix PD Motors.

As far as I can tell, the Governor does not have a motorcade. Some one else can correct me if I am wrong. DPS provides her Security Force along with all Executive Protection Security in Arizona. This means any bigwig that comes to town, they provide security. They work off DPS's Statewide Freq which is 460.225.

The car to car or TAC freq for DPS Metro or Central which is what they are calling now is the same as the freq you are hearing Metro or now called Central, and it is 460.325. We had a few posts here not to long ago about the way DPS does there car to car (or TAC), so if I am wrong please correct me again. Any of the freqs that you have for an area DPS works just so happens to be their TAC freq. I am not all that sure how they do it now, but you can hear them on the same freq every once in awhile talking to each other or just making jokes. I get the jokes some times and hear Sheila sometimes when she comes home and tell me the officers made some remark on TAC and they were close enough that they could hear what they were saying.

Hope this helps.

Keith

Keith Kyer said
> The car to car or TAC freq for DPS Metro or Central which is what they are ...

"Car to Car" and "TAC frequency" are overloaded terms that can mean several things - but the general meaning of TAC is a frequency that is used for unusual operations, i.e. a large manhunt, a parade, traffic after a football game, etc. Most agencies have a frequency (or a talkgroup) or two reserved for such use. Car to car means just that - quick communications meaningful only to a handful of nearby units. Car-to-car usually excludes interaction with a dispatcher, while Tactical channels frequently have dispatchers.

Back when we only had frequencies and not talkgroups, the frequencies were precious commodities. But with the advent of trunking, agencies typically have many more pre-assigned tactical talkgroups. For example, MCSO has TAC talkgroups for Eastside patrol, Westside patrol, Lake Patrol, Park Police, jail incidents, narcotics, and five talkgroups are set aside just for whatever special detail needs a channel, like Mall Patrol, Bank One Ballpark, hooker roundup, etc.

For some agencies, the TAC channels are repeated and even wide-area networked, like the DPS statewide TAC channel. TAC talkgroups on trunking systems are usually repeated, sometimes widely, depending on where the affiliated radios are located throughout a smart-zone system. Then again, sometimes the trunk system operator will permit a talk group only in a subset of the zones.

Car-to-car chit chat between officers is different than TACtical usage of a channel. Maybe there's a reserved frequency for it; e.g., Phoenix PD 10 and 11, which can be used for EITHER car-to-car (C/C) or TAC. Their usual use is Car-to-car, but for example, during the World Series, ch 10 was a tactical channel, used by officers AND A DISPATCHER, for series-related traffic in the downtown area.

Phoenix regularly uses TAC channels 1, 2, and 3, although they don't call them TAC, but rather refer to them as Chase channels. But they have the same characteristics as TAC channels. The field units are not permanently assigned to these channels - they migrate to and from them, depending on the tactical situation at any given time. In many other agencies, these would be called TAC channels.

I think the best scheme for tactical channels that I've come across is LA County Sheriff - dispatch channels cover 1 or 2 substations. For example Malibou (10) and Marina Del Rey (27) use F10 as a primary frequency. They are assigned to one of the ten Local TAC channels as

well ... Local TAC 1 (LTAC-1) which they share with WestHollywood, and then there are four Area Tac channels (ATAC North, East, South, and West), and finally 3 County-Wide TAC (CTAC) channels for major incidents. I presume that they use direct mode for car-to-car chit chat.

Scottsdale "David" and "Edward" talkgroups have assigned Tactical usage, but when they're not being used for those functions they are used by officers for coordinations, and for chit-chat. "1L13, Is David available?" "Dispatcher: 10-4." "1L13 to 1L9 10-12 David" "1L9 switching." If you want to scan this chit chat, your scanner has to be programmed to receive these "TAC" channels. Unfortunately, since they have dual usage, you have to listen to the chit chat to get the good stuff when "David" does become a active with a genuine situation.

For repeater operations, mobile units are frequently programmed so that they can "talk around" the repeater, also called "direct" mode. If they need to talk to a car or handheld nearby, they switch their transmit frequency from that of the repeater input to that of the repeater output. Now, they're transmitting on the frequency that other units are receiving, and thus they can talk, car-to-car, for short distances. As far as the scanner listener is concerned, there is no different channel involved here. The scanner hears it on the same channel as the scanner hears the dispatcher. If the scanner is close enough to the unit that is transmitting "direct", then the scanner will hear the transmission.

Some agencies, like MCSO, have dedicated "Car to Car" talkgroups, which officers can request. These are much like Phoenix's car-to-car channels - except that they will be repeated wherever in the smart zone network there is a radio affiliated with the talkgroup. For example, a Fountain Hills car could talk to a Gila Bend car if they both used the same C/C talk group.

MCSO also has Talk-Around channels programmed into many units. These are local simplex frequencies, and require both units to switch. They would be heard by a nearby scanner.

But the name C/C is nominal, at best - because the situation changes fluidly. For example, what started out as a small pursuit last night in the Wittman area started on a main channel with me as a dispatcher. When two of the deputies involved wanted to coordinate their efforts better, they asked for permission to use the C/C talkgroup. Soon, the helicopter joined in and got directions, and then the K9 unit, and other units coming to assist them. So, the C/C talkgroup quickly became a TACtical talkgroup. Which was just fine with me, because an Emergency dispatcher could monitor it, and it kept the traffic off of the main talkgroup. Meanwhile, other deputies that wanted to simply talk car-to-car in other parts of the westside of the county were directed to use the (vacant) Westside Tactical channel for their C/C ops. So, the terms really get blurred.

One of the distincitons I make in my mind is that a TACtical channel or talkgroup will most times have a dispatcher assigned or monitoring. Sometimes an Incident Commander functions as the controller of the channel. Car to car frequencies/talkgroups are more free-for-all. TAC channels are usually recorded, while Car-to-Car channels might not be. Certainly the direct mode C/C channels are not recorded except in very rare cases.

I hope I haven't cleared anything up ... my intention was to blur the definition of TAC and C/C to show you that they sometimes are the same, sometimes are different, and most of the time are confusing terms. :-)

Yup, it is a hell of a blurry line there between TAC and Car to Car as Danz so well points out.
I've also heard of doing away with "car to car" and "tactical" terms entirely, in agencies where the lines blur often, and instead just calling that channel the "alternate" channel. Alternate to? Well, "dispatch", or "primary". And alternate for whatever reason, be it car to car chat, a major incident, a parade, etc.

So, add Alternate and (in a few cases I've heard of, "Secondary") to the list of terms that all basically 'can' mean just about the same thing. I guess it all boils down to two types of channels in the law enforcement realm: The one you regularly patrol on and use most of the time, and the "other one", whatever it's name may be.

Nice explanations though, Danz!

Thank you Dan Dank.... I believe your final statement was
fulfilled... I feel thoroughly enlightened and confused at the same time!

Nahuatl... actually, I really appreciate your detailed
explanation into the subtle differences between the two terms TACtical
and Car-Car. I think the major difference, and you pointed this out many
times, is the presence/availability of a Dispatcher on a TACtical channel
(which is usually an actual channel!), whereas a Car-Car channel (which
is generally simplex operation on the output of a repeater freq) rarely
has one.

2266. AZ CAP Freq's.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-05 02:36:18 UTC
From: John H. Guetherman
Topic: 2266 Message: 2266

I have yet to catch any CAP radio traffic on the usual frequencies: 138.675 Air-to-air, 271.000 WADS, 282.600 Refueling Boom, 321.300 Albuquerque Center. I believe that's what has been posted lately.

I do hear/have heard some stuff on other frequencies: 335.800, 379.700, 288.300, 369.100, 272.100 (this evening), 311.300, 373.100, 338.900, 276.900 (active-training 7:30pm), 295.900, 308.900. These were part of a list of 20 frequencies that were emailed to me some time ago.

Could someone post the list of known CAP frequencies that I should be able to hear in the Phoenix area? By frequency and useage.

Thanks.

Scottsdale

Talk group

304 Motorist call box from Saguaro Lake or Lake Pleasant?
10064 React from Sun city maybe?

2268. Scannerstuff Newsletter - December Issue Posted

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-05 05:42:01 UTC
From: Dan Rollman
Topic: 2268 Message: 2268

Hi folks,

Just wanted to let you all know, the December, 2001 issue of the Scannerstuff Newsletter is now available for viewing online by Newsletter Subscribers.
For information on the Newsletter Subscription Service, please see http://www.scannerstuff.com/newsletter.htm

Please forward this email to anyone you believe may be interested in the Scannerstuff Newsletter online.

Subscribers have access to the August, 2001 through January, 2002 issues as well and all of the SWFD-6 updates contained in the 60-page "6th Edition Update" booklet (a $15 value in itself!).

The new December issue includes 11 pages packed full of information, all for Arizona. Here's some of what's included in this issue:

-Yet more Arizona DPS / Highway Patrol radio designators

-New Base for DPS Tucson Ranger (Ranger-38) Helicopter

-Buckeye Fire Department - new equipment

-Chandler Fashion Square radio repeaters

-Chandler Fire Department - 2nd Batallion

-Chandler Police Department - Updated Beat Map

-Cornville Page Springs FD Merger

-Glendale Fire Department utility truck

-Lake Havasu City FD Stations

-Pascua yaqui Tribe Police, new 800 MHz radio system

-Phoenix Fire Department - Future Fire Station Numbers, Locations, Dates

-Phoenix Police Department - More radio designators

-Tucson Fire Department - New Fire Station, Updated Personnel Radio ID's

-Tucson International Airport Authority - New 800 MHz Radio Frequencies usage

-Westcor Prescott Gateway Mall (opening March, 2002) - radio frequencies

-Southeast Arizona Medical Helicopters rundown

The Newsletter system is password-protected and available to current subscribers. If you're interested in local updated scanner information, tips, and feature articles, I encourage you to try out a 6-issue subscription for just $3 a month. Click on http://www.scannerstuff.com/newsletter.htm . If you are a current Newsletter subscriber, please let your friends in the radio and public safety hobby know about the service!

As always, we appreciate your updated and corrected information. Scannerstuff puts a considerable amount of time into research and acquisition of information for our publications and especially these monthly newsletters, but information directly from scanner hobbyists and professionals is always appreciated! Please email you corrected and updated information to updates@.... For questions or comments on the Scannerstuff Newsletter service please email newsletter@....

Sincerely,
Dan Rollman
Scannerstuff

You might want to check at the AirCommSouthwest Yahoo group if you haven't already. The moderator has spent a great deal of time uploading files and bookmarks not to mention the informative message posts by the group members.

2272. Discriminator Output

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-06 23:03:39 UTC
From: John LaBua
Topic: 2272 Message: 2272

Hi all,

After much fussing with myself, I've decided that I'd like to get a discriminator tap installed in my BC780.

That having been said, I'll admit that I do NOT have the knowledge or the tools to perform this mod. I'm looking for someone in the Phoenix, AZ area that has done this mod to their BC780 and would like to do another one. I'd pay for the time and parts naturally.

If someone would like to "volunteer" for this, please email me off list with their info and expected pricetag.

Also, please forgive me if this is considered off topic and the cross posting to the 3 groups that I read.

Thanks!

John

From: Dan Rollman
Topic: 2273 Message: 2274

Unfortunately the EF Johnson MultiNet II system that Pima County SO uses is Enhanced LTR, not traditional LTR. Currently there is not a scanner available that successfully tracks Enhanced LTR (aka "MultiNet II"). It is analog, so you can hear the audio out there, but your scanner will not be able to track it. Theoretically these MultiNet II systems are quite rare (most actually use regular LTR), but the two largest EF Johnson brand public safety radio systems in Arizona (Pima County and the City of Yuma) both happen to be MultiNet II. Our luck. :(

Anyway, remember that even regular LTR systems do not use a dedicated data channel like EDACS and Motorola systems do, so even if it were traditional LTR (MultiNet I system), you would not get (or need!) a data channel. The data bursts are carried on the same frequencies as voice traffic in an LTR system.

As for Marana PD, they are an EDACS system, and your Pro-92 should be able to Track them just fine if you have the frequencies in proper LCN (Logical Channel Numbering) order.

LCN #1: 855.7375
LCN #2: 859.4375
LCN #3: 855.9625

Talkgroups for Marana PD are as follows (using Uniden AFS format):

03-021 Ch1 Dispatch
03-022 Ch2 Car to Car / Tactical

You'll need to find them on your Pro-92 yourself, or convert to hex or decimal (or whatever Pro-92 uses). I am out of town and don't have my notes accessible, or I'd help convert them and tell you what they are for a Pro-92. Regardless, the frequencies should work when put in that order. Search, from there, once you lock onto the system.

If your list has those frequencies and you are still not hearing the data channel, is it possible you are too far from Marana? If those weren't the frequencies you had, then I must shamelessy plug the Southwest Frequency Directory (http://www.scannerstuff.com/SWFD.htm) and recommend a copy to you, written locally by Arizona scanner experts.

Let me know if you still have trouble, or if you discover those frequencies to no longer be valid. They are a newer set (changed about 2 years ago), and were valid as of a couple months back when I tried them.

12/7/2001 1449Z 352.00 mz: DARKSTAR QUEBEC with comm checks for BIGFOOT - took multiple calls and almost 5 minutes for BIGFOOT to answer, and then BIGFOOT was so far in the noise that all I heard was the ghost of a voice...DARKSTAR reported them LC. Where would BIGFOOT's transmitter(s)be?

Also different voice (flight crew?) on DARKSTAR (w/o the QUEBEC) working ZIA on 306.2 at the same time, seem to be pretty popular for MILAIR comms w/ZIA up here.

Usually hear DARKSTAR working the training in the Bagdad and or Williams MOA on (373.10 / 322.60 / 338.90).

First time I've heard a BIGFOOT comm, and have never heard the CATS or RUBBER up here...

Oh, and I double-checked the date this time :)

2279. 2002 Winter Olympics-Radios Restricted

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-08 10:54:28 UTC
From: jhguetherman
Topic: 2279 Message: 2279

This may be slightly off-topic, but was anyone planning on attending? In the December issue of "Monitoring Times" magazine, is an article about radio communications in and around Salt Lake City, Utah, the site of the 2002 Winter Olympics, by Jon Van Allen. In it, includes these paragraphs that are of particular interest to anyone who had planned on bringing any two-way radio gear, including Amateur, CB, FRS, GMRS, or MURS; or a scanner:

"It has been suggested that you may not be able to take a scanner into an indoor event (as was the case during the Atlanta Olympics), so you may have to monitor outside or enjoy the event without your scanner. The only way to find out for sure is to ask and hope they let you through. Regulations at outdoor events may depend on how close to the venue you are. There are various stages of security, so you will be able to scan from a distance. What that distance is remains to be seen."

(next paragraph)

"We were told that NO unauthorized radio gear will be allowed into the venues and FCC volunteers will check out all radios. As mentioned earlier, all authorized radios will have a special sticker with a bar code. So don't bring your ham gear, FRS, MURS or any other transmit-capable radios to the events; they will probably not be allowed past security."

Want to try to sneak in a radio? Don't. From a couple of earlier paragraphs:

"For the duration of the Olympics (and at least a few weeks prior) portions of the radio spectrum are temporarily set aside for exclusive use by the countries participating in the Olympics. A good-sized chunk of business, goverment and amateur radio frequencies were "commandeered" by the FCC for the duration of the Olympics. There are so many different countries represented, they must have access to the frequency bands their radio and video equipment operate in. This means the US must provide those frequencies and ensure they are not compromised. There is no need for any further hints on where to monitor: every scannable frequency is fair game at the Games!"

and...

"The FCC has been charged with enforcing the availability of that spectrum, and has installed over a dozen recieving "pods" which can monitor virtually the entire spectrum from DC to daylight. These pods are interconnected and controlled by a central computer system which can pinpoint a signal's position to a few meters' accuracy in less

than one second. The FCC has been up front in warning that unauthorized communications anywhere in the radio spectrum will not be tolerated. During the emergency preparedness meetings I attended prior to the Olympics, the FCC convincingly demonstrated their resolve to swat flies with a sledgehammer."

Hey guys:

I have a DPS (Criminal Investigations) radio that I bought off the used market (not stolen, I promise). It has some channels in it that I'm not sure about. One is named "UHP1" and the frequency is 155.625. I've heard some interesting traffic it so far. Any ideas as to what it is? Thanks.

From: Dan Danz
Topic: 2280 Message: 2281

Well,at the time DPS had it, it probably was Utah Highway Patrol, since there's a bunch of licenses to them for it in the Public Safety Pool for Utah.

However, in AZ, other than a Utah relay transmitter in Littlefield, it's used by:

Apache Junction PD dispatch (PL 127.3) and Wickenburg PD Dispatch (PL 110.9) in the Phoenix area.

Others that show up in the licensing database:

Patagonia, Cottonwood, Yuma County, Williams, Page, White Mountain Apache

Hi Aaron,

Just wanted to let you (and others) know, I verified Marana's frequencies, LCN's, and talkgroups myself this afternoon. They are in fact still using those same three frequencies I posted in my last message, and 03-021 and 03-022 are still the two most active talkgroups. I had no trouble TrunkTracking them on my Uniden BC245XLT with stock antenna from Magee & Oracle, and again from the 1st Avenue & River Road area, without missing any parts of conversations.

Perhaps you are further away from Marana?

Morning all... in reviewing the December issue of Monitoring
Times, I came across the the blurb about the Intra Squad Radio freqs, and
my question is... what mode (am or fm) do these radios use to
transmit??? Seeing as they (the 14 channels) are in the 396-399 mhz
range, it might be easy to assume that the mode is AM, but would that be
a correct assumption??

Aaron,
I live near I10 and Cortaro and checked Marana PD last night. Freqs Dan gave you are working. Your right, they are not real active but more than
that, you really have to turn the volume up on your radio. Their signal strength is high enough but their modulation is very low. I don't listen to
Marana PD for that reason. If I have volume up to hear them, then other channels I'm monitoring blast thru to load.

Well... so far the consensus is that they mode is FM, and after researching the IC-4008A, and if indeed the "M" model is nothing more than an "A" model operating in a different freq range, then I would be willing to bet that indeed the mode is FM.... however, has anyone logged any "hits" on the 14 assigned freqs??? With 13,000 of these things in the USMC's hands, and who knows how many in other dept's hands, surely someone has heard something on these freqs!

Considering that FRS radios typically have a range of a half-mile or
less, maybe stretching out to a mile, you'd have to be real close to
a military base, or an active operation, or spot a convoy on the
road, that is actually using them, in order to hear them. It would be
my guess that when the bases re-open for air shows and other
open-house-type events, would be the best time to listen for them, if
security allows you to have any scanners and/or two-way radios with
you. And they may or may not be encrypted. Here's the ISR channels:

1) 396.875 8) 397.950
2) 397.175 9) 398.050
3) 397.175 10) 399.425
4) 397.375 11) 399.475
5) 397.425 12) 399.725
6) 397.475 13) 399.925
7) 397.550 14) 399.975

I live @ Bell & Tatum in North Phoenix, I try to listen to the air channels but never hear anything about the Balloon traffic that is all over up there in the mornings. I saw a thing in the SWFD called a balloon port on 151.895, is this the only channel they use? I am guessing they are just running little handhelds, what kind of range do they have?
Also, I was listening to some interesting stuff on 453.2 the General Investigation Bureau (G.I.B). What do they do? They were following someone all day, using a helicopter & what seemed to be unmarked cars, but never arrested anyone. Several times the Helicopter came back with information about weather conditions or information given back to him by some ATC. Question I guess is, do these cop copters work on both regular aircraft frequencies and on police frequiencies at the same time?
Thanks for any answers... I just want to know everything, I guess that's why most of you have this as a hobby too! haha

Being on a hot air balloon crew as a crew chief and student pilot,
here's what I have heard being used by other crews in the area of
Cave Creek and Jomax Rd's.:

151.625 frequent
151.700 once
151.805 frequent
151.895 frequent
151.955 frequent
154.570 once or twice
154.600 couple of times

My crew uses C.B. ch. 32 AM.

I'd give you more details as to who uses them, but my father
apparently accidentally deleted my Excel file with that info. I am
not a happy person right now.

Also listen to 123.300 and 123.500. These two channels are permitted
to be used by hot air balloons and their chase vehicles, when
properly licensed for an aviation support mobile station. I have not
really monitored them. Phoenix PD air support used to utilize 123.500
in the past for their chit-chat before going to 123.550 (although
they're mostly on 123.025 with all the other helo's), and I did hear
what sounded like gliders/soaring activity then.

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=87&S
ECTION=323&YEAR=2000&TYPE=TEXT

"PART 87--AVIATION SERVICES--Table of Contents
Subpart K--Aviation Support Stations
Sec. 87.323 Frequencies.

(a) 121.500 MHz: Emergency and distress only.
(b) The frequencies 121.950, 123.300 and 123.500 MHz are available for assignment to aviation support stations used for pilot training, coordination of lighter-than-air aircraft operations, or coordination of soaring or free ballooning activities. Applicants for 121.950 MHz must coordinate their proposal with the appropriate FAA Regional Spectrum Management Office. The application must specify the FAA Region notified and the date notified. Applicants for aviation support land stations may request frequency(ies) based upon their eligibility although the Commission reserves the right to specify the frequency of assignment. Aviation support mobile stations will be assigned 123.300 and 123.500 MHz.

However, aviation support mobile stations must operate only on a noninterference basis to communications between aircraft and aviation support land stations."

Doesn't AZ DPS have some shared frequencies used with Utah Highway Patrol, in conjuction with the patrol area on/near Interstate 15 in Arizona, between the Nevada and Utah borders? I thought I remembered reading this in an old copy of DPS Digest or Arizona Highways some years back. Seems to me I remember that the DPS officer resided in St. George, (Washington County) Utah and patrolled that section of I -15 from NV to UT border because it was so remote and far removed from regular DPS patrol districts, and UHP was the closest backup. I have confirmed that UHP is (or was) licensed on 155.625 Mhz, as KL5245 (mobile) in the 90's. I would be curious to know if I remember this correctly.

I have a DPS (Criminal Investigations) radio that I bought off the used market (not stolen, I promise). It has some channels in it that I'm not sure about. One is named "UHP1" and the frequency is 155.625. I've heard some interesting traffic it so far. Any ideas as to what it is? Thanks.

That could be it. Infact, this radio apparantly was not ment especially for the Phoenix metro but it does have Districts 1, 2, 3, 5, 11, 12, and 14 programmed in along with a Tactical channel...it would make sense that this radio is for the guys on the borders...maybe not for the CI guys after all (I'm getting this thing reprogrammed, anyway, after I get a battery for it. Thanks.

Hi all,

I know this is way off topic but wanted to get the word out about this website. It is what I can best describe as a web memorial for the September terrorist attacks. It takes quite awhile to load, but is well worth the wait. If you are still severely bothered by those events, you might want to think twice about viewing this site. While there is NO particularly bad spots, there are a few places that are quite touching.

Take a look and always remember....

http://attacked911.tripod.com/

Now I'll get back on topic.....

Interesting. I've got a Target about 2 miles from me. Suppose I should go look.

Saw a house fire several nights ago, after getting off of work, in the area of 93rd and Camelback. BC 3 was there, with a Ford Super-Duty crew cab pickup. Really interesting strobe-type lights it had. LED's I think. Anyone know for certain? (I work in Avondale, live in Peoria, saw the smoke on the way home, and decided to check it out.)

Response was EP's 44, 725, and 152, LT161, U171, BC's 3 and 171, and an unknown Phoenix Rescue, no number visible. An AR Van also showed up. I also noticed that EP152 had one of it's spotlights aimed skyward, lit. I think 725 did as well. Is this a policy or something? EP152 appeared to be the RIC, as it was almost the furthest away.

Indeed the lights you saw were LED's.
They are appearing on police and fire vehicles around the city.
Those LED light bars on the police cars about 1/4 inch thick but when they turn em on they look to be 4 feet thick!
Watch out for those guys ... I am sure the city's citation revenue is skyward with those light bars working the streets!

In response to the spotlights ... not a policy of any sort.

Actually, there is an occasional gem that occurs on the Detail
talkgroup, which is analog. For example, during the World Series, Ball
Park Security,
including crowd control, fights, clearing out TGI Friday's after the
game.... all clearly heard from my home up in Anthem.

Normally, however, the talkgroup is pretty quiet.

Nice lights. *grin* In addition to the roof light bar, he had a pair of them on his tailgate. One red, and one blue. Close up, they were almost, if not completely, on the same horizontal plane. Down the street, they appeared to be really offset by several inches. Really attention getting.

LED's are a lower power draw, as well, aren't they? Reduce's the demand on the alternator.

"Phoenix Metro Traffic". Remember the questions about them several months ago? I saw a Caprice/Crown Vic, in a funeral home parking lot with several motors at 67th Ave. and Thunderbird Rd. Wednesday morning, fully decked out with a light bar, and even push bars on the front bumper. Not sure about antenna's, but I could have sworn it had multiple. Big, bold graphics on the side with their name. Has anyone figured out their frequencies yet?

Not to sound morbid, but maybe someone can check the obits for memorial/funeral service dates and locations, and maybe quietly grab a few pictures from a respectful distance? I don't have a camera of my own, sorry. Would they be in the phone book? Or does the funeral home arrange that?

John.

453.2 is called 450 Channel 2. I haven't listend to it much recently because it is usually crossbanded to 150 channel 12 (Information) although that is not always the case.

Are you sure you weren't listening to 453.6, 450 Channel 4? They have been working a survailance on there for the last couple of days. You will also hear the same on 453.8, 450 channel 4 and 453.675, 540 channel 6. 453.6 usually has OCB (Organized Crime Burearu), the Gang Squad, Vice and sometimes TOU operating on it. However, if there is an operation of somet type ie: survalance, sting operation, etc traffic gets gumbled around on all of the 450's except 450-1 and 450-3 since they are crossbanded with the 150's.

I may be a little off on what bureaus are actually using wich channel but I think I am pretty close.

I listen to Phoenix PD a lot, and I've never heard 450-2 patched with 150-12. Ever. Occasionally, I have heard 450-2 patched with 150-2 for special events. 450-2 is regularly used by GIB for the kind of surveillance operations that macgyvertp was referring to. 450-4 is used by DEB, OCB, and QRT units. 450-5 and 450-6 are usually used by SAU and quite often encrypted. 450-7 is referred to as "Company" and from what I can tell is mostly used as a spare UHF channel. It is occasionally used by PAP and NET squads working prostitution stings, but these are usually worked by OCB on 450-4. 450-2, 4, 5, 6, and 7 also operate in simplex ("B" mode), and a lot of operations are worked that can only be heard within a few blocks or by listening to the air support.

2309. CA CHP Frequencies???

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-14 20:33:46 UTC
From: k1fhz
Topic: 2309 Message: 2309

Hy Guys I am making a trip tomorrow, Sat the 15th, west on I-40 to I-15 then south to Victorville. I make this trip several times a year but have not done so since June of this year and I am wondering if there have been any changes to the CHP's system in this area.

I monitor 42.56 (base) and 42.72 (mobile) (white) all the way to Victorville and back. There is seldom much traffic out there but enough to be interesting at times. Again just wondering if CHP has made any changes. Have they gone to a repeater system out there yet as they have in many other areas, etc..

I also monitor the Blue frequency 42.36, 42.18 as well as their extender freq. of 154.905. Any other suggestions?? Thanks in advance.

From: foresigt
Topic: 2308 Message: 2310

That's really interesting about 450-2 as I was listening to it as I typed the last messge and it was crosbanded with 150-12. Also, there is alot of analog traffic on 450-5 and 450-6. I have it programmed into my radios with the pl's so I don't hear the encrypted traffic and hear a fair amount in analog.

I guess it depends what time of the day you are listening. As for the company channel, I have found that even though they aren't suppose to, they use one of the vhf bug frequency (155.565) as a talk channel. I think that is the "compan" frequency. That is, other than the aircraft company frequency.

During special events such as when the president and such has been here, I have heard 450-4 crossbanded with 150-2 or any other frequency. I've also heard it crossbanded to some of the district channels for hot traffic. That get's to be a drag when they forget to delete the CB.

Back when we were Hi-Band that may have been true.
Currently, the officers that are stationed in St.George, Utah
(the only patrol office outside the state!) have Hi-Band radios installed
in their
patrol cars for the express purpose of talking to the Utah pd's and so's.

The frequencies you mentioned are current and yes they are on
a "repeater" system.

Victorville 850 12 White 42.56 42.72 118.8

From: kd7jvr
Topic: 2317 Message: 2317

Does anybody know if the East Valley DUI task force is using a dedicated frequeny this year or are all the agencies using thier own freqs? It was in years past that Chandler or Tempe was able to simulcast all VHF/UHF/and Trunked freqs on interagnecies (155.475 and 460.375) channels. Wasn't sure if that was still the case.

Also in case anyone is interested I have been listening to Mall Patrols on TG 3984 on the MC Trunked system in the clear.

Hello :)

Is there a LTR trunked radio system on UHF in Tucson that a BC 780 or a non-trunked radio can hear?

Thanks K-C

Steve,

I'm not sure about dedicated frequencies for all law enforcement, but I've been listening to Mesa, and it sounds like during the evenings, they are allocating Ch 8 & 9 traffic to DUI Task Force related stops only.

They are also using these two frequencies outside of Mesa (Scottsdale and parts of Phoenix were other cities I heard last night).

8 - 155.535
9 - 155.880

I wasn't even aware of Chandler/Tempe using the freqs you mention, but I will definitely give them a listen...

Alan

2320. RE: [ArizonaScanner] East Valley DUI Task Force and Mall Patrol

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-17 00:34:36 UTC
From: Dan Rollman
Topic: 2317 Message: 2320

In my experience riding with the Southern Arizona DUI Task Force in Tucson, the officers often share a channel for communication with one another (it has varied in Tucson, almost annually), but also often come up on an alternate channel with their own agency to run people, plates, notify their dispatcher of things, etc.

Could be the whole operation in the East Valley is now using Mesa 8 & 9, but I've also been told they use an alternate Tempe PD talkgroup (with loaned radios for East Valley agencies like Mesa and AJ that want to play, but don't have 800 MHz equipment). Likewise, there's no doubt that officers still come up on their own agency's radio's when Tempe is busy or whatever. And as I say, they may not even use the Tempe talkgroup as primary anymore.

If any of this helps! :)

Dan

East Valley DUI Task Force is using Tempe's 800mhz trunked system for DUI traffic. We hand out 800mhz radio's to all agencies that are currently not on trunking at this time for use during the task force. I went to the first night of the task force and it is a very eye opening experience to see all the people they bring in totally wasted. Some of these people can not even walk. These are the same people out sharing the road with you and your family. You would think with the new DUI laws people would start to get the point.

They are also using these two frequencies outside of Mesa (Scottsdale and parts of Phoenix were other cities I heard last night).

8 - 155.535
9 - 155.880

I wasn't even aware of Chandler/Tempe using the freqs you mention, but I will definitely give them a listen...

Subject: [ArizonaScanner] East Valley DUI Task Force and Mall Patrol

Does anybody know if the East Valley DUI task force is using a dedicated frequeny this year or are all the agencies using thier own

freqs? It was in years past that Chandler or Tempe was able to simulcast all VHF/UHF/and Trunked freqs on interagnecies (155.475 and 460.375) channels. Wasn't sure if that was still the case.

Also in case anyone is interested I have been listening to Mall Patrols on TG 3984 on the MC Trunked system in the clear.

Steve

Thanks for that info, Mike!

Any idea which talkgroup it is they're using these days? H? And I assume the traffic the others heard on Mesa 8 & 9 was that alternate contact when the Tempe talkgroup is busy, or the officers just feel like using their own dispatcher. Also, any idea if the Tempe talkgroup is monitored by base for 27/28/29 when away from their computer, or do they go to B? I suppose perhaps it's not monitored and just used for coordinate among the task for officers.

It is encouraging to see DUI decreasing, thanks in large part to the aggressive enforcements efforts of the past few years, but it sure would be nice if the new law punches yet another hole in it. It's crazy to hear a DUI officer run a subject, and have the dispatcher read back 3 suspensions and 5 prior DUI convictions with a warrant for FTA 28-1381!

Dan

--- Original Message---

East Valley DUI Task Force is using Tempe's 800mhz trunked system for DUI traffic. We hand out 800mhz radio's to all agencies that are currently not
on trunking at this time for use during the task force. I went to the first night of the task force and it is a very eye opening experience to see all the people they bring in totally wasted. Some of these people can not even walk. These are the same people out sharing the road with you and your family. You would think with the new DUI laws people would start to get the
point.

The talk group we are using is H. I am not sure about this year but the last few years the officers from other agencies other than Tempe run the 28's 29's on their own system. The radios given out to the other agencies only have talkgroup H in them. We are also going to be handing out an additional 70 radios for New Years Eve Block Party. Most traffic will be on talkgroups B and E. We also have Team Security and E Staff security coming in and they will be running on Creative Communications 900mhz system. Should be a great night for monitoring these talkgroups

Yeah, they're supposed to do their stops on the Tempe channel, but our guys are
more comfortable on their own channels. We've been using Lakes-1 (Digital) for
the crew. You might hear some of it, along with the mall patrol folks on analog
Special Detail D and E. ...

But those who drive drunk have a special treat coming for them .. in the past week,
I've had two long-dormant call signs come active when I was working main channel, 620Z and
627Z both checked 10-8, enroute to the task force. That would be the motor sergeant
and motor officer who were mowed down by the drunk while working DUI task force more
than a year ago on the Bush Hy.

I don't ever want to drive drunk, and if I did, I wouldn't want to be stopped, but I'll
bet these two would cut you no slack if they stopped you for DUI.

But, as Dan noted, the bleeding hearts in the court system would probably let me go.

On January 13th it arrives into Tucson from Albuquerque. 13th or 14th is Phoenix area. Then it heads down I-8 to San Diego, and up the 5 to the LA Area.

Does anybody know the input/output and and PL's for Mesa Fire Channel 3 and Pinal County SO channel 1 & 2?

The info I have for them must be bad.

2330. ArizonaScanner Digest Number 523 Re: Slightly off topic

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-22 02:08:23 UTC
From: BD18PACKER@aol.com
Topic: 2330 Message: 2330

Short of following them around with a frequency counter and checking the output freq when they key up, I don't think we're going to find any info on them. The "funeral cops" from Phoenix Metro Traffic, are a PRIVATE, not a public agency.
Has anyone considered asking them what they use for communications, ie: equipment; simplex, duplex, trunked comms on what frequencies, VHF, UHF, 800 Mhz? Perhaps if they are seen sometime out and about, someone might inquire.
Original Mesage:
"Phoenix Metro Traffic". Remember the questions about them several months ago? I saw a Caprice/Crown Vic, in a funeral home parking lot with several motors at 67th Ave. and Thunderbird Rd. Wednesday morning, fully decked out with a light bar, and even push bars on the front bumper. Not sure about antenna's, but I could have sworn it had multiple. Big, bold graphics on the side with their name. Has anyone figured out their frequencies yet?

Just thought some of you might be interested in this...the man in charge of Security for the Olympic torch run is the former public relations officer/spokesperson for the Jefferson County (CO) Sheriff's office. The retired JeffCo Sheriff 's deputy (whose name I cannot recall...sorry) became a media star when the events at Columbine High School occurred some years ago. As I recall, he handled a difficult assignment with professionalism and respect, even though some of the media was hostile and downright nasty about the information (or lack of it) available at the time, and in the days after. I saw a news report on the local channel (in Denver, CO) late last month or early this month about him and the Olympic Torch Run across America. The info about the frequency of the Torch run was very welcome. Thanks.

I live in the same neighboorhood where these cars and cycles are parked in front of a house. I have had the opportunity to look inside one of their cars parked on the street and saw NO radio equipment. This is not to say that they don't have radios. But I saw one of their "drivers" in front of a 7-11 with a BC245XLT scanner on his belt. I honestly do not think they have radios. I have seen these cars and cycles do a funeral escort near the VA center at Ind Sch and 7 st but the residence they park in front of is in Chandler.

Ran into one of my friends in the department today. Asked him about the changes I've heard with their radio system. He said that they're putting a new console in for channel 1, 453.650, so they have the old one set-up on channel 4 right now, till the new one gets all the bugs worked out of it. He also said that they will be moving to the city of Phoenix trunked system, when it goes online in about 2 years. (His words.)

I didn't ask about the new unit identifier's I've heard, like the Adam-800 series units.

That's all I have.

2337. AirEvac and PL question...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-22 17:31:07 UTC
From: John LaBua
Topic: 2337 Message: 2337

Hi all,

I'm making some programming changes in my radio and have a question.

In the SWFD under the AirEvac heading there is a frequency listed as 'A12 Sacaton Police Department - Ch 2' without a PL tone. When this frequency is programmed in the radio, I am receiving what sounds like (I'm not familiar with Sacaton area) regular PD type traffic. Using the Squelch Search mode of the radio, I find that this traffic has a PL tone associated with it.

Do the AirEvac helicopters also transmit this tone when using this frequency? Since I only want to monitor the AirEvac traffic, can this tone be locked out without losing the AirEvac traffic or should it have been included under the AirEvac listing?

The same thing is also happening with the frequency listed as 'A5 Pinal County SO - Ch 1' for sure and probably others that I haven't caught yet.

Thanks for any help on this...

John

2338. RE: [ArizonaScanner] AirEvac and PL question...

Yahoo group: ArizonaScanner (1999 — 2002)

From: Andrew Clark
Topic: 2337 Message: 2338

Those listings simply show how the radios in the AirEvac helicopters are set up, or what is on which channel in the radio. The only time AirEvac would be using that channel is the occasion that they would have to talk to someone from Sacaton PD as a ground contact, and in that case they would be using the same PL that the Sacaton PD units are using. Same goes for Pinal County SO.

Subject: [ArizonaScanner] AirEvac and PL question...

Hi all,

I'm making some programming changes in my radio and have a question.

In the SWFD under the AirEvac heading there is a frequency listed as 'A12 Sacaton Police Department - Ch 2' without a PL tone. When this frequency is programmed in the radio, I am receiving what sounds like (I'm not familiar with Sacaton area) regular PD type traffic. Using the Squelch Search mode of the radio, I find that this traffic has a PL tone associated with it.

Do the AirEvac helicopters also transmit this tone when using this frequency? Since I only want to monitor the AirEvac traffic, can this tone be locked out without losing the AirEvac traffic or should it have been included under the AirEvac listing?

The same thing is also happening with the frequency listed as 'A5 Pinal County SO - Ch 1' for sure and probably others that I haven't caught yet.

Thanks for any help on this...

John

2340. Williams Gateway Military Traffic

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-23 21:24:24 UTC
From: Alan
Topic: 2340 Message: 2340

Hi all,

Williams Gateway (Mesa) is reasonably close to where I live, and on occasion, I notice that fighter jets still take-off now and then.

Does anyone in this group know if they use the same freqs for comms as commercial aircraft, or if they are using specially designated channels in the 226-400 region?

Just curious - there is a lot more traffic overhead now, and I would like to try to catch some of it. any help is appreciated!

Thanks in advance,

Alan

Typically they operate on Military Air frequencies.
They are the same ones that were there when it was a military base. I
appologize that I don□t have those frequencies with me.
If I can dig them up, I will post them.

Mike

2345. R382 audible in Peoria?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-27 09:00:21 UTC
From: jhguetherman
Topic: 2345 Message: 2345

At about 12:25am, I heard what sounded like "Rescue 382 enroute" on Phoenix fire channel 1. Seeing as how R382 is in Gila Bend, and I'm a mile west of downtown Peoria, I should not be hearing them at all without the aid of Blue-Deck 12's repeater.

Can anyone confirm that R382 was indeed enroute to a call at about that time? Or was I hearing things? I hadn't been paying attention to the channel prior to that, so I didn't hear the dispatch itself. And I wasn't monitoring any other fire channel at all. It sounded like a female voice. It was very scratchy, but readable.

Tropospheric ducting, maybe? Or were they located at a "sweet spot" that got their signal up here for the 2 seconds or so needed to make that transmission? What kind of radio and antenna combination(s) do they have on their rigs? Power output?

I heard them on an Electra Bearcat 210, with a Radio Shack back-of-set telescopic antenna. That 20-plus year old scanner is used as a single-channel monitor on Phoenix fire channel 1, as it won't program properly anymore.

Secondly, Surprise appears to have an Engine 304, that I've been hearing going on calls recently. The last I heard, they had E301, L302, (a quint), a pair of Brush/Medic trucks, and a water tender. Is E304 a new unit, a reserve unit, or one of the Brush/Medic units?

Lastly, which departments have been assigned the 360 and 390 series? They're the only two holes between Phoenix's 1-99 and Ft. McDowell at 400-409.

2346. Anybody hearing any MURS useage?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-27 09:25:54 UTC
From: jhguetherman
Topic: 2346 Message: 2346

Out of curiosity, I'm wondering if anyone has heard any personal communications on the new MURS channels?

In November of 2000, the FCC reassigned 5 business band radio channels to the Multi-Use Radio Service, a Part 95 Personal Radio Service, eliminating the licensing requirement, and opening it up to personal and family communications, in addition to business communications. The 5 frequencies are 151.820, 151.880, 151.940, 154.570, and 154.600. They are limited to 2 watts ERP, and must meet tighter bandwidth and deviation limitations. For more information check out

http://www.provide.net/~prsg/murshome.htm

I'd just like to know if anyone is hearing anything yet. I'd like to share that info with the "murs" group here on Yahoo, and with Doug Smith's Popular Wireless BBS,

http://www.popularwireless.com/

which is dedicated to many of the personal and other radio services available to the general public. I believe I have only heard a few snippets on either 151.820 or 151.880 in the past few weeks. Thanks.

John,

E304 the 2nd Engine Co in Surpise now in addition to E301 L302 and the brush trucks. I believe they run out of Sta302 temp until their station is finished in the area of 163rd Ave & Grand. Sta303 which is not built nor is the ground broken for the station will be in the area of Loop 303 & Cotton lane. Its still about a year away.

They were following a subject who ran thru a check point in mesa, and refused to pull over, they pepper sprayed him, bean baged him and he would not stop.

he threatened 666 (suicide) if they pulled him over, he lost 1 wheel on his car and still drove the vehicle from mesa pd. after they pulled him over mesa approached and he got in his car and attempted to flee. The officers (7) fired there weapons and wounded the subject. it took a few min for fire to be called and he was transported to scottsdale osborne hospital er. he died at the hospital.. right after he got in the vehicle the officers were screaming 999, 999, then i heard a 2nd officer say 998, watch your cross fire, and someone said he was hit.

2358. Glendale Scanner Online...

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2001-12-30 01:46:10 UTC
From: John LaBua
Topic: 2358 Message: 2358

Hi all,

I've decided to try this out and see how well it flys.

I've made my scanner available online for anyone to listen to. It is strictly an audio feed (no cash = no video) and it will not be available all the time until I make sure that the rest of my system is protected from hackers.

Available is the Glendale, AZ PD trunked system, Phoenix FD, the CAP patrol freqs, AZ Department of Public Safety District 5, Border Patrol, Maricopa County Sheriff's Office (Hot traffic / Search and Rescue only!), both UHF and VHF Guard, AirEvac, MEDS, LifeNet and MCSO trunked (including Fountain Hills PD & Surprise PD).

If this eventually becomes permanent, this probably won't be the final selection of freqs available. I encourage anyone who wants to take a listen to do so and if there is something that they would like to hear that isn't included let me know. Also, I'd like some feedback as to the listenability and quality that you get with your connection.

Good listening!

John

From: fyrfotog2@aol.com
Topic: 2363 Message: 2363

hello everyone. Just a little info when tuning into our neighbors just to the south of us.

Gila River Fire Dept. will go to their new Maricopa County Fire numbers at 00:01 or 12:01 am Jan 1st, 2002 in the 420 series. No more 590's.

Station 591 next to Firebird Raceway becomes Station 429 located there will be.
BC421 Covers all districts and M/A requests
E429 Covers partial Dist 4 & 5
LT429 when they buy a new one but a reserve pumper is acting as the LT right now and it carries basic Hazmat & TRT equip. The former Squad was wrecked & out of service. Covers all districts
Support 429 S/C only carries extra equip for LT429

Station 531 in Sacaton becomes Station 423
E423 covers Dist 1 2 3 & partial 4 & 5

Station 561 on the west side of the Res becomes Station 426
E426 covers Dist 6 & 7
Br426 covers all districts

In the future for at least 1 ladder coming soon and then a 2nd in a couple years and more engines.

Subject: Imperiel County Report-new BLM system?

After having spent a few days in Imperial County I can report activity on the following freqs.:

SHERIFF 156.0300
SHERIFF 154.8450
SHERIFF 154.9950
SHERIFF 155.7450
SHERIFF 155.9200
FIRE 154.3700
FIRE 154.0100
FIRE 154.4300
MED 155.3250
MED 155.1750
MED 155.3850
MED 46.3200
MED 46.3800
S&R 155.1600
BRAWLEY PD 155.0100
EL CENTRO PD 154.8150
NILAND FIRE 154.1900
CHP EL CENTRO 42.9200
CHP EL CENTRO 42.6400
BORDER PATROL 163.375
BORDER PATROL163.7250
BORDER PATROL163.7750
BORDER PATROL 163.750
BLM 166.3750*

*while 2 BLM officers were discussing coordination of several controlled burns and providing law enforcement for off road vehicle traffic one officer mentioned that communications were confusing because some of his people had "switched to the new radio system" ..... anyone know what's up with that?

I also monitored (in conventional mode) the freqs listed as "future trunk system" and heard what must have been a data channel (Motorola) and occasional digital transmissions, no analog/voice at all. Can anyone confirm the status of this system?
Imperial Co. Trunk 864.0500

Imperial Co. Trunk 864.1000
Imperial Co. Trunk 865.1000
Imperial Co. Trunk 865.0500

There appears to be some maintenance related comms from what may be one of the assisted living/nursing homes within a mile of me on 151.820. Transmissions were regarding getting a couple of rooms ready to be moved into by (this past) Saturday. Making sure the gas was on, setting the thermostat at 70 degrees, etc. I think I also heard two of the guys talking/complaining about some road construction in the area one morning as well. (91st Ave. north of Cactus Rd. New ramps to Loop 101.)

There's some nurses at another al/n home nearby on FRS 13 (467.6875) as well. Talking about who has gotten their medication, changing bedding, etc.

I haven't used my ham dual-bander to check for CTCSS yet.

There are 1 or 2 home complexes a mile west of me, (just south of F/S 132) and a home and a home complex just a few blocks southeast of me, and another home complex about a half-mile east of me. I haven't identified which home is using what radio channel.

By complex, I mean apartment-style. One home is just that, a large home that was converted to an al/n home.

Caught this on another list.

Walter Howard
TeleComm Supervisor
Arizona Dept. of Public Safety
"Courteous Vigilance"
All opinions expressed are personal, NOT THE DEPARTMENT'S!

Fwd: from USA_Skywarn

Recently, a gang of 6 criminals was apprehended in Garland, Texas
just prior to executing a well planned robbery of a restaurant.
Their plans were thwarted because they were overheard planning and
coordinating the robbery on 154.570 MHz, one of the "dot"
frequencies.

During a recent trip to Raleigh, North Carolina, I read a newspaper
article about another criminal gang that had just been arrested by
the police. This gang had performed over 40 successful robberies in
North Carolina and Virginia while using walkie-talkies to coordinate
their robberies.

These groups were using the hand held units to communicate between
robbers, look-outs and get-away car drivers. There's no way of
knowing how much illegal use is occurring....(Snipped)

A list of "dot" frequencies can be found at the following URL:

http://www.k5kj.net/dot_freqs.htm

These frequencies are also used legitimately by businesses and
individuals, including large retails stores, construction companies,
drive-through fast food establishments, hikers and campers.

73,

Sam - K5KJ

Look no further than the Southwest Frequency Directory.
It will get you all the way through to California and help you along considerably once you are there.

You can pick it up in most radio shops.

Just came from meeting with my friends for lunch at Station 25 and BC3.

Seems that on Jan 3rd, 2002, Phx Fire will start dispatching 3-1 assignments. NO MORE 2-1's as we have always heard before. Remember this is in the City of Phoenix only.

1st alarms are now 5-2's (5 engines and 2 ladders) No more 4 engines.

Yah, I know what a 998 is. What I was trying to ask was what was the
original call that he was responding to prior to the 998 incident.
Didn't know if anyone had been monitoring 400 when the call came out.
I heard it come out on chase and switched over. Never could tell
what the original call was for. My assumption was Domestic Violence,
but I never was able to confirm it.

Hey

I live down from the Officer involved shooting in the foothills area.
The Mobil Action Command (MAC) has just arrived on scene.
What has happened is two officers responded to a house call for DV or
what ever; not sure. However, there was a mentally ill person in the
house and wrestled with the officers who then shot the ill person.
The person is dead and the officers are ok.

More to come

From: fyrfotog2@aol.com
Topic: 2383 Message: 2383

The subject just recently came up about the new Phoenix 3-1 dispatch assignments.
The memo I received was VERY vague in the weather the new assignments are for Structure Fire calls only or will include medical calls also. Members of the PFD have asked the same questions.

1) These assignments are just for the City of Phoenix Fire Dept only at this time. As previously stated, the other cities dispatched by Phoenix have indicated their own protocols on how "they" want to be dispatched. In Tempe for instance, they like a 2-1 assignment for a car fire in a parking structure where as in Phx its usually initially 1 Engine. Other cities say they WILL respond to snake calls, where as most others won't. But I am sure with the automatic aid agreement in place you most likely will hear a unit from another fire dept going on a Phx 3-1.

2) The Battalion Chief I just spoke with tonight (Wed) told me that his understanding is that ALL 2-1's (fires,medicals, whatever) are now upgraded to 3-1's. First alarms that used to have 4 engines and 2 ladders have been upgraded with a 5 engine for a 5-2.

3) Once again the question has come up within the fire dept about the 3rd engine on the 3-1's if that is the RIC engine or not. I guess we will just have to listen on the 3rd and hear how its done. It was exlpained to me that the 3rd engine IS part of the Safety component but no further information is available as its not been fully explained or defined. The memo also states that in the next few months the number of units dispatched on a RIC assignment will be increased but it has not been 100% decided upon what thay will be.

I will have more info next week.

Also rumor is that Laveen will get swallowed up into Phx Fire this year sometime.

I don't know of another board that would be specific to Arizona for that kind of subject, but based on your description of the topic you are interested in I would think it would fit on this list. I think with a subject of "scanning", and public safety being perhaps the largest focus of scanner listeners, the general operation of fire departments (even beyond communications) would fit on this list. Especially considering that although not directly communications related, the operation of fire equipment, ambulance contracts, etc. are certainly central to what you hear on the scanner.

Subject: [ArizonaScanner] Fire Info re: Amb Ops & Truck/Tender Ops

I have a few questions I would like to post re Fire Department ambulance service and Ops questions re Ladders/Trucks & Ladder/Truck Tenders or support units. These questions ARE NOT comms related so I am requesting if you know of a Board I may go to to ask as these Q's will generate additional on-going dialog. I would specifically like to direct these Q's to the Fire Community in the Metro Phoenix area.

Thank You

I guess I should clarify what I wrote, and say that if your interest is of a semi general nature, give it a shot. If it is something highly technical and would drag on, then perhaps it would be best to ask your question here and then ask others with info to email you privately and do it that way.

Dan

Hello

Looking for help on finding frequencies for the National Guard Base at 52nd Street and McDowell. (Papago Army Air Field)

I am particulary interested in the frequencies used by the helicopters that fly in and out of the base. There seems to be quite a bit of movement of the blackhawks based there as of late. Also have noticed a coast guard helicopter in and out of there lately.

Any help is greatly appreciated.
You can reply to the list or my personal email of
michael@...

Thanks

Mike

I have 49.950 FM, 126.050 AM, and 244.300 AM. I have not actually heard any comms on these 3 frequencies, so I don't know if they're any good.

Can anyone else give confirmed frequencies?

And is there a place nearby the field there where we could go to safely watch the helo's fly in and out? I like helicopters, and it would be nice to be able to watch them take off and land once in awhile.

From: Don Armstrong
Topic: 2389 Message: 2389

I had an opportunity to speak to some contacts at Icom America yesterday, and I inquired about the IC 4008 M, the "military" FRS radio... and it is indeed nothing more than a 4008 operating at 397/399 mhz instead of the 462/467 mhz range. Therefore it is indeed operating FM and only with 1/2 watt.

I have been looking thru the SW Freq Dir (#6), and the Update Booklet, and I cant help but notice that Graham County listings are somewhat sparse! I am planning a visit in that neck of the woods soon, and I was wondering if anybody can add to, or correct, any of the listings found in the directory. Now, before you'all jump my case, I know that the book is pretty darned accurate, but I also know that things change.... can anybody help out here???

2391. Re: [ArizonaScanner] Re: Az National Guard

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-05 16:31:05 UTC
From: Dennis Griffin
Topic: 2387 Message: 2391

Hi John and Mike,

Seems we three have a common interest - helos. I live south of McDowell, just west of Hayden, so I'm just south of the flight path used by the helos traversing between the Papago Field and points east. So I see neat stuff all the time. However, I'm sorry to say that I have never taken the time to try to find their freqs. This is mostly because I'm not sure where to start. I have been thinking of getting an Optoelectronics near field freq counter, which may be of some help. I'm assuming they count all freqs, regardless of mode.
John, I have seen many posts from you, and they always seem to have substance and be of interest. I've thought it would be interesting to meet you someday. Well, this may be the time, because I too want to go sit and watch the helos come and go, and I know where to do it. My dog and I hike the Papago Buttes, although it has been awhile, and there is a great spot that isn't too hard to get to that makes a great observation point. From this point, you can see them inbound, while they make their final south around the Buttes and while they land. Let me know if you would like to get together sometime to check it out. Might make a good field trip prior to an Incident Command Page meeting, if Dan is listening. Not sure if you are a member of ICP, John, but Mike and I are. There are other members that are interested in aircraft as well.
If anyone else out there has ideas on freqs, let me know. I'm certainly in a good spot to be listening, and I have several radios and antennas capable of receiving, as I am also an Amateur Radio Operator.

2396. RE: [ArizonaScanner] Graham County.....

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-05 18:12:25 UTC
From: Dan Rollman
Topic: 2390 Message: 2396

Hi Donnie,

Please let me and the rest of the list know what you find for Graham County as well! As I'm sure you're aware, it is a county of fewer than 30,000 people (less than 1/4 your home Cochise County), and so in terms of frequencies, there just plain isn't all that much there. For that matter, there is only three incorporated towns in the whole county! :) What you see on Page 65 is about what's there.

You want to see an even more sparse place? Try Greenlee County (just east of Graham County, along the New Mexico border). That one has 8,000 people total in two towns. How's that for tiny! Imagine knowing not everyone in your neighborhood, not everyone in your town, but everyone in your county! LOL

Dan

John, Mike, and Dennis,

I have the same freqs as John for Papago. Here are some other National Guard freqs, that I've picked up from others but haven't confirmed:

Papago AAF:
49.95 - Air-to-Air Ops
126.05
244.30

Picacho NG:
126.20
397.30

Silverbell NG:
41.50 - Heliport Ops
123.05 - Heliport Ops
245.10 - Heliport Ops

John

Here is the full Press Release from Uniden It will be sent out on the 8Th.

Press Release

Date: 1/8/02

Title: UNIDEN DEBUTS NEW APCO 25 DIGITAL SCANNER MODELS

SubTitle: Electronics Giant to Sell Software to Customize Monitoring Experience

Synopsis: Uniden lifts the curtain on its long-anticipated APCO 25 digital scanner models.

Body: LAS VEGAS (January 8) - Uniden America Corporation today unveiled its new digital scanner line for 2002, including the consumer electronics leader's much-anticipated base and handheld APCO 25 digital scanning models. Speaking at CES, product manager Scott Carpenter showcased the new scanner products, underscoring the company's commitment to keeping its customers at the forefront of scanning technology. "Our retailers have been pushing us for a Uniden APCO 25 product for months, and our new BC250D handheld and our BC785D base/mobile scanning unit represent the fulfillment of our promise," Carpenter said. "With the ability to monitor conventional, trunked and APCO 25 conventional and trunked systems these models are state-of-the-art radio scanners. According to Uniden representatives, the Bearcat BC250D and the Bearcat BC785D models, which are slated to hit shelves in late 2002, offer 1,100 channels, 10 banks and a frequency
range of 25MHz - 1300MHz. The BC250D comprises all of the features of Uniden's market-leading BC780 XLT in a handheld model, plus adds APCO 25
capability and an additional 600 channels. Users of both models must purchase an APCO 25 card, the BCi25D, separately. "We're pleased to be bringing these great Bearcat APCO 25 units to market," Carpenter said. "We expect more big cities to migrate to the APCO 25 digital technology,
like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like - and we know news organizations, businesses and consumers will want to monitor their signals." Uniden officials stressed that APCO 25 digital scanning technology simply gives
users the ability to monitor the day-to-day activities and signals of standard city and government service departments - but in no way allows users to monitor encrypted signals from national and local security

organizations. In a separate announcement Uniden also announced its plans to market its own easy-to-use scanner programming software, which it is demonstrating in its booth at this winter's annual Consumer Electronics Show in Las Vegas. The software will allow the users of all Uniden scanners with data ports to easily program frequencies into the channels and banks of their scanner. About Uniden Uniden America Corporation, the North American subsidiary of Japan based Uniden Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications systems, multimedia communications devices, scanner radios, CB radios, FRS, Marine radios and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells it products through dealers and
distributors throughout North, Central and South America. # # #

From AirCommSouthwest:

"From: "djr503" <djr503@...>
Subject: Re: AZ National Guard

I can confirm the frequencies 49.95, 126.05, and 244.3 are active for Papago. I also have confirmed 40.5, and 143.725 in nfm. I have heard activity on 148.65 nfm but dont have a id for it.

Dan in Tempe"

That field trip sounds like a good idea to me. My work schedule is a bit chaotic as far as what days I get off. I just had Friday and Saturday (today), this coming week it's going to be Wednesday and Thursday. I do like to hike, even though my knees will complain if there's a lot of up and down hill. (I'm only 31 for Pete's sake.) Let me know what would be best for you, and I'll see how my schedule falls in the coming weeks. (We should probably take that to private email.) I'm not a member of ICP, although I have been interested in the past. Mainly just haven't had the $$ to spare for the pager and membership costs. I'm a member of the "working poor" don't ya know. :sarcasm:

2404. Motorola testing radios

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-06 19:02:00 UTC
From: Dan Danz
Topic: 2404 Message: 2404

This note appeared in a dispatcher-oriented news list ...

Motorola reports it completed a set of "long anticipated" factory acceptance tests on Project 25-compliant radio gear ordered by Mesa and Phoenix (Ariz.). The tests were designed to, "ensure digital, trunked Project 25 compliant radios built by multiple manufacturers will interoperate with each other," the company said. In this case, the Motorola gear worked with EF Johnson radios and IFR test equipment. A Motorola press release said Wulfsberg Electronics and Kenwood expressed "very strong" interest in participating, "but were unable to meet the timeline that Mesa and Phoenix had to work with." The radio system for the two cities will take about two years to fully install, will cover 2,000 square miles, and handle Gilbert, Mesa and Phoenix police departments, and 17 fire agencies. Final radio load: 15,000 mobiles and portables.

From: August Hoecker
Topic: 2404 Message: 2408

As an x communications engineer for a large CA County this scares the hell out of me in this time of terrorist war!
Imagine loosing control of communications for 15,000 units servicing many cities that as stand alone communications device at 700 to 900 MHz can send a message across town if there is nothing in the way like a building and you live in a very small town!

I wonder what their basic, low tech backup communications plan is? I often wonder how many NYFD personnel could not get through with their super Mot $3,000 HT's that were not working to well?

Does anyone know about a back up system and a backup for the backup?

Just wondering,
August

From: freqofnature
Topic: 2404 Message: 2409

Orange County, CA was actually one of the earliest case studies for 800 MHz trunked radio years ago (1979 if I remember correctly). The County currently operates on an analog trunked system for fire and a digital w/encryption for law enforcement.

It would be just as easy if not easier for a terrorist group to take out a VHF or UHF repeater system (There are more repeater sites in an 800 MHz system).

I've heard the County Fire Authority purposly take the system offline (during low peak time) to perform such tests. If the computers fail for any reason the system(s) revert to a failsafe channel. If the mobile units lose the control channel they will automatically revert to this failsafe channel and when the control channel goes back online they will pick it back up.

One of the major problems (The bigest problem in my humble opinion) with 800 MHz public-safety systems right now is the interference with cellular communications. The city of Portland Oregon is much happier today because Nextel Communications has (temporarily) tweaked their cellsites to reduce the problem (This was mentioned in the news the other day).

There were problems with the FDNY radios even prior to 9-11 and prior to and on the day of 9-11 they were on an analog system. Communications still failed because the repeater site located on tower 1 "failed".

You can read the recent newspaper stories about this on my web site.

Okay, Adam 804 is the animal control officer. The one with the Irish or Scottish accent.

Who is Sam 784? Sounds like a regular patrol officer.

"Patrol", followed by a 2-digit number, are the shift Lieutenant's. Formerly Lincoln units. Patrol 30 is the Lt. I know. You may hear Patrol and Lincoln used interchangeably at times.

I've noticed they've put the alpha prefix ahead of the shift number, instead of between the shift number and the patrol beat. 1 Charlie 22 is now Charlie 122, for example. In the old style, that indicated a civilian observer ride-along. Now I'm not so sure. Tom units may be either a Field Training Officer with a rookie officer, and/or those with LoJack stolen vehicle, or Pronet bank bag tracking capability.

Anyone else notice a discrepancy in the numbers? Phoenix dispatches for 19 departments, itself included. Mesa for 3, itself included. That's 22 departments. The above says 17. Any idea why the difference in numbers?

Even if Laveen were to be absorbed into Phoenix, if the rumor is true, that still leaves 21.

Either some departments will go back to self-dispatch or form their own agreements, or that "17" is not an accurate number.

Perhaps it leaves off Buckeye and Buckeye Rural (new to Phoenix system) and Gila Bend (ambulance dispatching only). And then maybe we can just attribute the other two to the fact that many scanner listeners (like you) know more about local radio communications and public safety agencies than the local radio and public safety folks. :) You'd be amazed how many Valley radio shops and public safety people have copies of SWFD to get an idea of what the agency next door is running.

2414. Motorola BACKUP ????

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-09 17:11:56 UTC
From: August Hoecker
Topic: 2414 Message: 2414

Dan or other Knowledgeable folks.
How will this 800 MHz 15,000 unit be backed up in case of a major natural disaster, act of war or just major technical failures???

Will there be a 100% VHF or ??? simplex or repeater systems with perhaps a basic low band simplex system to
fall back on when this Mot thing doesn't work for any reason? GOD forbid a terrorist attack would take out
the central computer system(s) or?????

With 1,000's of units depending on one major SUHF trunking system that will directly be involved in the safety of human
life it would seem there must be a back up system. The car to car or car to base simplex range I Would not think
would be reliable enough at these frequencies.

So does any one know if and what the backup system will be for 15,000 units?? What happened with the NY FD
system doesn't offer any additional confidence either.

I'm picturing one of the first conceptual meetings years ago at
Motorola to discuss trunked public safety radio systems.
There's one crusty old unshaven engineer hiding in the back who's
only comment during the entire meeting is
"What happens when the system takes a dump?"
Thus, failsafe mode was born. The system reverts to a conventional
repeater system.
As for disaster, acts of war, or terrorism; I would think it's as
vulnerable as any other radio system, only now, due to huge number of
users on the system, the implications are much greater.
Just my thoughts.
Carl

This may be a little bit off topic, but here goes,
I'm interested to see if anyone might have an interest in, a
Uniden Bearcat 2500XLT 400 Channel Scanner. It is still brand new in
the box with all the manuals.
I recently upgraded to the Bearcat 245XLT, from the 2500XLT, as I
found it works a lot better for my interests, especially with the
change over to trunk systems.
any reasonable offers accepted, Thanks (Celticprid449078@...)

May I vent a pet peeve that really drives me crazy? Thank you. This may be peculiar to California, but it seems that everywhere I go these days police dispatchers have an over-abundance of "OUT OF" that they have to broadcast with every 10-28 (vehicle registration). They must be saying it purely out of (bad) habit, because it certainly doesn't serve any purpose, nor does it usually make any sense whatsoever. And it wastes a few milliseconds of airtime each time.

16-101 runs a 28 and the dispatcher dutifully tells him: "16-101 Humboldt, 4ABC123, a 1998 Chevrolet Sedan, to John Smith, 123 Main Street out of Cedarville" Now 123 Main Street sure sounds like it's right IN Cedarville, but no matter; EVERY registered owner apparently lives OUT OF his/her home town.

CHP dispatchers seem to have the greatest attachment to OUT OFs, and since they're everywhere the locals hear it and start parroting it. Give a listen to just about any agency and see if their dispatchers are doing it. I know it won't be stopped, no more than that ridiculous, meaningless, airtime-wasting "Be advised" will ever be stopped, but I just had to get it off my chest.

It's nothing, I know, but every time I hear a registration or driver's license check to someone who's "out of San Francisco" I find the need to yell at my scanner. "NO! 1164 Van Ness is IN San Francisco, it's not OUT OF San Francisco. It's right downtown"

Thank you. Now I feel better. Would you give a listen and tell me whether it's an epidemic? Is it just happening out of California, or have dispatchers out of other states caught it too?

Date: 2002-01-10 05:32:00 UTC
From: Justin Crawford
Topic: 2419 Message: 2421

The reason for the use of the phrase 'out of' is that the registration was issued 'out of' the jurisdiction of the city the registered owner lives in. It really has nothing to do with the address of the registered owner, but which jurisdiction the registration was registered in. In other words John Smith's registration came out of the jurisdiction of the city of Cedarville. Hope this makes it a little clearer.
And yes, this happens all over AZ as well.

Harry,

If I'm on a traffic stop in Chandler, and I run the vehicle and the registration address is IN Phoenix, then isn't my vehicle, my subject, and his registration "OUT OF" Phoenix? Of course it is. It's "IN" Chandler. But you're right, "it's nothing". Let's not go overboard.

I mean for example, you said "it's nothing". How can what you said really be "nothing"? They are words, a statement, an argument, an email, etc.

Also, here's a few variations of the definition of "out of" provided by The American HeritageR Dictionary of the English Language, Fourth Edition.
PREPOSITION
1. c. From an origin, source, or cause: "made out of wood; did it out of spite." d. In, especially intermittently in: "works out of the main office."

If it's "Out of San Francisco", that meets the "origin is San Francisco" meaning as per 1C in the definition.
Also, 1D clearly shows that "out of" also means "in", essentially. Silly, I know. But that's our language, Harry! :) If I work out of the main office, does that mean I never work "in" the main office? Of course not, just the opposite.

I didn't make that definition up. LOL

I'm not sure why I bothered to respond to your email explaining your annoyance, but I was curious. :) I think "out of" in the context you explained it is no more improper today than the thousands of other phrases that once were not, but have become, proper English. It's why dictionaries have "editions". Hopefully seeing that some form of what you're hearing on the scanner is actually in the dictionary will help you rest a little easier in front of your scanners, I know I will. (rest easier in front of my scanners, that is, not yours! You almost caught me on one!). Now please excuse me, I need to get back to attentively waiting for a glass of water to evaporate. I have an annoyance with that whole "evaporation" thing.

Dan

Does anyone have any first hand experience with the Radio Shack handheld frequency counters?
Are they grossly inferior in performance to the name brands we see for sale in the scanner mags?

I am trying to find the frequency of the Target Department store in Oro Valley and they are not on the channels mentioned in the SFD, 6th Ed. While I could hang out in my car in their parking lot and band scan, a new toy seems like a more rewarding option.

Mark,

Unfortunately Target stores seem to have a different set of frequencies for nearly every store. The ones you see in the Tucson section are the store at Oracle and Roger. 154.570, 154.515, 154.540, and 154.600 are also popular at Targets.

Now I certainly don't want to steer you away from a new toy (any excuse for a new electronic gizmo is a good excuse, right!?), but one thing you might want to try is programming and scanning the 20 or so VHF and UHF "Itinerates" on Page 386 of SWFD-6 (in the "Other Frequencies" section).

I've used the Radio Shack frequency counter and don't have any major gripes with it. But if you want a slick little (cheap) frequency counter, check out:
http://www.optoelectronics.com/microcounter.htm

That's about as inconspicuous (spelling ok, Harry?) as a frequency counter can get. And it goes for a little more than a hundred bucks, too. Can't really speak in depth to the performance of the thing, but I did play with it at IWCE (Int'l Wireless Communications Expo) last year in Vegas, and it seemed to do well.

Dan

Topic: 2419 Message: 2426

I had seen Harry's original post on socalscan, and asked him to post it here. His post there started a whole thread on questions along this line. I thought it was interesting, and wanted to see what the members here have heard that they wondered "why do they say it that way?".

I'm going to see if I can pick up any oddities on the channels that I normally monitor. I don't recall hearing the "out of" phrase that Harry mentioned.

Some others mentioned were "Copy" in place of "10-4" or acknowledging a transmission with the unit's number, and nothing else. The use of ebonics in certain cities, such as Detroit and Houston, I think it was. Stumbling over your own words when you realize that what you're about to say makes no sense whatsoever. *grin*

Harry himself was a dispatcher for quite some time, (LAPD and others), so he does listen with a critical ear to the transmissions. Probably more so than many of us who aren't involved in a direct way with public safety. So it makes sense to me that he may have a pet peeve or two when it comes to hearing folks who are supposed to be extremely professional, saying things that just aren't quite right at times. It may not be a big deal, but then again, most pet peeves that each of us have, aren't a big deal to anyone who doesn't share them with us, right?

2427. Train vs. Transient

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-10 06:55:02 UTC
From: jgbdps
Topic: 2427 Message: 2427

I was in DPS District 6 today. I stopped to get a hamburger at Wendies at the Casa Grande strip mall at 198 and I-10. I noticed a northwest bound Southern Pacific train was stopped. I drove southeast on SR 84 just passing I-10 parallel to the rail road tracks when I saw many squad cars. When I drove by I saw officer taking pictures at one of the freight cars. I couldn't see much but some yellow tarps covered "the scene". I didn't hear much radio traffic (DPS) but I think a transient was run over by the train. Just wondering if anyone was monitoring Pinal County Sheriffs radio or knew exactly what had happened.

Thanks,
Joshua B.

2428. Radio-syncracies

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-10 07:55:21 UTC
From: Harry Marnell
Topic: 2428 Message: 2428

The thread about radio procedures has been running all day on a couple groups...here are some of the better one that came up today. i should save all this and put it in a book... or on a webpage

Harry

In no particular order ...

> My personal favorite is "at this time", as if we want to know or are
> speaking of another time.
> And that is from a dispatchers perspective.
=======
And "at this time" has a reverse corollary of "WILL BE," as in, "the suspect will be a white male..." or "traffic stop at First and Main, the plate WILL BE 123XYZ." I always wanted to ask, "WHEN will the suspect, or license, or date of birth be...?"
========
Oh, and I thought my acceptable one was NFI, no foggy idea.
========
with some dispatchers and officers it's become "copy" instead of "10-4" or even "copy" just for something to say to start off a message; a great example of this is on a Redding CA PD pursuit recorded at < http://bayscan1.50megs.com/rpd1121.wav >. I can't even count the copies on that. One other neat part of this is toward the end when the sergeant "Sam 9" tells the unit to terminate the pursuit...which message the unit kind of just doesn't hear until the suspect bails out and runs. Copy copy copy
==========
that brings up some places in Southern California. The first place I heard it was El Monte PD in the 1970s, then it spread into Orange County. No more NUMBERS on street addresses... they became - are you ready for this - NUMERICALS or, sometimes abbreviated to "NUMERICS" - "15S3, repeat the numericals on my call on Valley Blvd" Gawd I hope they've quit THAT
==========
I love it. And in Kansas the word "telephone" has been replaced with "public service" in every context on PD radio. "Give him a Public Service and see if he can come in on the late shift". OR "Call me on the Public Service and I'll give you her name." Or "I Public Serviced the hospital and told them to disregard."
==========
In New Hampshire they will give you a "New England"
for the old days when it was New England Telephone.
Funny, it never changed to a "Bell Atlantic", "Nynex", or now a "Verizon"
Also in New Hampshire, you acknowledge with a 10-5, not a 10-4
==========
how about NYPD dispatch procedures, which harken back to a time when English was a much more formal language:

"confines of the xx precinct" rather than "in the xx precinct"
"forthwith" instead of "urgent"
"RMP" (Radio Motor Patrol unit) instead of "police car" or "vehicle"
"MOS" (member of the service) instead of "officer"
"aided" instead of "victim"

Anyone who regularly monitors NYPD will have a much longer list.
==========
Now That's REAL radio talk -K :}

K= Over
Boss = SGT or Higher
Skell = Skeleton Crackhead
Collar-up= Lock up some bad guys
Squad = Detective Squad
Tune-up= Beating
Shoe Fly's = IAD = Internal Affairs Division
BUS= Ambulance
Suit-up = ESU's Full Body Armor
Door Tied off = Door Secured from the outside so perps can't leave.
And the list goes on.....
==========
CHP Santa Ana dispatch regularly uses this term on the air to dispatch an
officer to a call:
"IF YOU COULD respond to ....." If you could? Where does that come from?
One dispatcher there used the word "ah" about every three words when she
talks on the
air, very annoying!
==========
There's a dispatcher for Eureka CA Police & Fire
who handles police dispatches pretty "normally," but on fire dispatches her
SOP is: "Engine 1, Engine 3, Truck 1, REQUEST you respond to a structure
fire
at...." I guess they can decline if they have something else they'd rather
do.
==========
Yeah, I can hear it now: "Uh, no thanks dispatch, we just started
dinner".
:)
==========
There used to be a LASD dispatcher who, when giving out registration info
would
always add a whole bunch of extra words, especially "residing at' or "who
resides at" .. she'd regularly have to back up and correct herself when the
address was a PO Box. Her "28's" came out something like "Temple 52Adam,
on your '28,' 1-6-4-Mary-Nora-Paul is registered to a 1964 Ford sedan,
registered owner is a John W-as-in-William Smith, residing at 5420 East Las
Tunas Drive in the city of Temple City; 52Adam."
==========
One thing that drives me nuts is dispatchers say "red in color". Why not
just red or whatever color it is?
==========

> Down in Houston, Texas
> its "CLEAR."
> >
> > So, when you hear what the dispatcher says, you tell her "Clear"...
> >
> > Where did "Clear" come from "Yes, I heard what you said"... It
> spills over to the other services, as well.
> >
> > Not to mention half the dispatchers (this is no lie) you couldn't
> understand because of the ebonics problem. No wonder God gave us CAD

LOL. I just asked about the use of "K", morse code shorthand for "I'm done transmitting, you can reply now", on socalscan. I thought it was either Florida or Philadelphia, from episode's of "COPS" that I had heard/seen it used.

And telephone is almost always "21", as in 10-21, in Peoria. They seem to shorten several of the 10 codes, by dropping the 10. But that does speed things up just a tad.

What other funny and/or strange things have folks here heard? Either on a daily basis, or just that one-time occasion that sticks in your mind?

John.

Mark,
The RS frequency counter does not have the sensitivity nor was it
designed to do what you want it to do!

You would have to be almost on top of the hand held transmitting to get
a reading and the RS unit will not
store that frequency for you. It was designed to be used as a bench
counter or for use while doing mobile
installations, etc..

The message Dan sent you makes good sense. Give scanning a try first.

Almost as good as the mall cops at Park Mall (Had to have someting to
do while wife and daughter visit every store);

"LL" - Land Line
"Mike" - Minutes
"TP" - TPD
"...I'll give you a LL in about 10 Mike..."
"...TP is on LL reporting a 911 hang-up...."

There were a bunch of others that I can't remember, but it made a
otherwise boring trip bearable.

Thanks a lot for all that, Bob...good stuff, and you're proably right on target about how these terms suddenly just "happen."

I think what gets to me, at the bottom of all this, is that folks who are COMMUNICATING as a livelihood are doing an lot of (little) mis-communicating which if unchecked could blow up in their faces. Words DO have meaning, and when those meanings or usage gets distorted, "communication" starts to break down. I don't expect a plain ol' run-of-the-mill police officer to necessarily be a good communicator, but a dispatcher certainly should, and should set an example for his/her officers.

Thank you for the quick reply.. G=7=July and D=4=1994; probably not "modifiable" for some illegal-to-listen-to 800-band freqs then. (which is good, of course <g>)

Let me think about this... I already have one which is a terrific radio especially for rural or suburban listening; I've found that in a "big city" it tends to get overloaded with intermod sometimes. Mine is same date code...do I need another, or hold onto my headset for a new digital-capable one in "late 2002 (I'll bet)".

Harry says:
>> May I vent a pet peeve that really drives me crazy? Thank you. This may be
>> peculiar to California, but it seems that everywhere I go these days police
>> dispatchers have an over-abundance of "OUT OF" that they have to broadcast
>> with every 10-28 (vehicle registration).

I think it's probably an outgrowth of some dispatchers who don't give the name
and/or street address. I know a lot of them 'round here do it. "AB123C is
a 90 Chevy pickup, (expiring) 2 of 2002, (to a subject) out of Laveen."

It doesn't sound right to just say "Laveen" without the "out of".
I find myself doing it both ways you mentioned...
if I give the adress, I always say "in",

If I'm working the info channel, I almost always give everything on the registration, but if I'm working a main channel and it's busy, I tend to cut
back on the amount of information to that which he needs to know as he's

walking up to the car on a traffic stop. For example, if the car is out of
town, he probably doesn't care about the specific address - just which town.
In that case, I'm liable to say "to a Johnson out of Bullhead City". If the
plate is for an Attempt to Locate and is in the same area as the officer,
I'll always give the street address, including "in" the city.

When I first started listening in Arizona (having come from Texas), I found it
annoying to hear a dispatcher say "Which unit is clearing?" when the unit
wasn't CLEARING THE CALL, but was CALLING the dispatcher. In Texas we said
"Unit calling?", and reserved "clearing" for call disposition.
I thought that Arizona dispatchers were strange, and the way they pronounced
complainant, as complaint-ant, was equally bizzare.

Well, I guess I've heard the "unit clearing?" stuff so much, that I actually
said it the other night, to my chagrin.

But if anybody ever hears me say "complaintant", just take me out and shoot me.

By the way, if you folks want to see a little about MCSO radio, check out my pages at

http://dan.danz.home.att.net/mcso/telecommunications.htm

There is hope in the future perhaps. As I travel across the country I hear more and more (still not that many though) public service agencies (PD, FD, SO's, EMT's , etc.) going back to "Plain Language" and dropping the 10, 11, 12 and 13 codes I have heard as I travel. In a few areas, mid west somewhere??, it seems it is optional with the officer on patrol? Or the newer, younger officers are not using the 10 codes and the older officers still do because of habit or a stiff will to sound like a cop????

I have heard things like "20-101 this is radio" (who else??) "this is 101" "101 you have a 21 holding from xxxxx"
"TELL HIM I'LL CALL HIM BACK, 101 clear" "20-101 is clear, 10-21 traffic at 2021"

The same state police agency: "Harry you got your 21 with you?" "Yes John" What's your CELL number?" "Harry I'll give you a call in about 1, going to pull into Mom and Pete's place, call ya then" "10-4 37 I'll wait thanks for the 21"
"OK John" It was a crackup to listen to. Code No Code?

One of the best and shortest calls was heard at the end of a long 2-way conversation between car 1 and base when car -1 calls his buddy in car-2 and askes him in a serious tone "Hank, is it still OK to say 10-4?"
"10-4 Smitty"

I've often wondered why departments don't use plain english. Are codes supposed to be secret so that I (the casual listener) won't understand what's happening? Given less than ten minutes I can figure out what the AZ DPS means by a 101. On New Years Eve, at an accident at I10 and I19, I heard the DPS say "the pregnant one-oh-one has been transported to St. Mary's." Even a bone head like me can pretty much rule out that a pregnant 101 is not the family pet. John

John,

The idea of professionalism and simplicity that Harry mentioned is a larger reason why many departments use codes. In the same way that Harry and so many others notice the idiosyncrasies of specific agencies and dispatchers, using preset codes essentially eliminate personal idiosyncrasies when it comes to speaking on the radio (or at least for the terms covered by the code list). While I found (and still find) the topic humourous, I think there's merit to the idea of professionalism coming with standardization, be it in code or in other plain english standardized terms.

I've never had an experienced dispatcher tell me codes are simply to keep scanner listeners and bad guys from understanding the message. Quite the opposite. I mean Mesa PD, for example, now makes their code list (and frequencies) available on their website. I suppose there are certain terms meant to throw off bad guys (not necessarily scanner listeners), but the success of even those is questionable. If you have SWFD-6, take a look at Pages 171 - 173. Many of the terms in there are "surveillance" names for Tucson's streets, so as to throw someone off as to where the parade is or is going. "The Bird" for Swan Road, "the Super Slab" for I-10, "The Soup" for Campbell Avenue, "Little King" for Prince Road, and "The General" for Grant Road. On a surveillance parade it wouldn't be uncommon to hear "ok, we're Westbound on the General from the Bird, he may be planning on going up the Soup or hitting the Super Slab." It doesn't take long to figure out what all that means. :)

I've often wondered why departments don't use plain english. Are codes supposed to be secret so that I (the casual listener) won't understand what's happening? Given less than ten minutes I can figure out what the AZ DPS means by a 101. On New Years Eve, at an accident at I10 and I19, I heard the DPS say "the pregnant one-oh-one has been transported to St. Mary's." Even a bone head like me can pretty much rule out that a pregnant 101 is not the family pet. John

Here in Yavapai County the SO used to "Blind Call' a unit...but the
transmission was this:
"Blind Call 435" that's it. My conception of a blind call was to give info
over the radio that the officers did not need to respond to immediately:
"435 Blind Call 10-28 negative"...or some such...and harking back to an old
beer commercial, what do you do when the dispatcher answers a request "Are
you ready to copy information" with a hearty "Yes I Am!"...the officer
laughed all the way through his transmission. And how about strange phonetic
codes: "P as in Pine - T as in Tree" given for the initials of a PT
Cruiser...the joys of scanning!

From: jhguetherman
Topic: 2445 Message: 2446

I've heard DPS use blind calls a lot down here in Phoenix, too. Either because the dispatcher doesn't get a response right away, or they're in a hurry, and don't want to wait for the officer to respond back. Instead of (dispatcher) "1 William 44", (officer) "1 William 44", (dispatcher) "1 William 44, your 926 (tow truck) has a 10 minute ETA." (officer) "1 William 44 copies"; they cut it down to "1 William 44 in the blind, your 926 has an ETA of 10", and the officer may or may not acknowledge that. I would assume that they only do that for minor FYI stuff, not for anything important that really needs to be acknowledged.

As for funny, the one that comes to mind, is when a Peoria officer accidentally wrote a ticket for parking in a handicapped spot, untill he realized that the handicapped spot was on the other side. (Two parking spaces nose-to-nose, only one was handicapped.) He got his sergeant on one of the secondary channels, and asked if he could revoke it himself. The sgt. said yes. The officer was a bit embarrased by his mistake, and asked the sgt. not to spread it around. The sgt. said that only he, the dispatchers, records, and any scanner listener's would know about it, and you could hear the amusement in the sgt's. voice as he said it. *grin* I was tempted to call on the non-emergency number and ask the call-taker to let the officer and sgt. know that at least one scanner listener did hear the whole thing, but I didn't.

2449. Codes vs "Clear Speech"

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-11 06:44:02 UTC
From: hamtrak98
Topic: 2449 Message: 2449

A major shortcoming of ANY radio code system is when mutual aid is activated. Fortunately, most mutual aid incidents are fire-service types of events, and the fire service has traditionally been less tied to codes and has always tended to use relatively "plain" language on the radio.

When APCO introduced the first 10-codes about 1939, the expectation was that the codes would be accepted everywhere and remain standardized. Which probably lasted about 15 minutes, as every department found things that DIDN'T need codes and other things they DID want to give 10-code numbers for. So standardization of codes has long since been a myth.

In 1971, the Lakewood CO Department of Public Safety conducted a seemingly scientific study of the relative value of their existing "10-codes" and a new standardized "clear speech" radio procedure. Radio traffic was recorded and analyzed over a number of weeks, and the results showed that, even though the clear speech system was new, there were actually fewer errors with clear speech than with 10-codes, and roughly 13% less airtime was used with clear speech.

I've uploaded the thing to http://www.snowcrest.net/marnells/53.pdf if anybody cares.

I've used the RS freq counter successfully to get frequencies. The RS model comes with a telescoping antenna so you can tune it to the band your interested in. It's certainly not a top of the line freq counter by any means but it does the job.

A freq counter (I think this would be true of any make/model) is best used when you are close to the source of transmission since it will display the strongest transmitting frequency. It's great a great tool to have with you for events like county fairs.

Real world examples:

- I was able to quickly pick up the frequencies for the Orange County Fair by standing near the command post.

- At my work I was asked to purchase and program business radios for the warehouse but I didn't know what frequency the other radios were programmed with. Instead of using the hit and miss method of programming a radio several times I simply keyed the mic on one of the radios and there was the frequency.

- There was a train vs. vehicle TC near my home so I walked down to the scene to check things out. I was talking with a police officer assigned to stop traffic. The freq counter picked up the radio road frequency (which I didn't know) so I programmed the scanner with the frequency and the officer gave the station progress reports "The tracks will be cleared in 5 minutes".

- Have time to waste while the carload of kids in front of you are ordering food at the drive thru window? Use the freq counter to get the drive thru frequency and listen in on what toy Sally and Timmy get to fight over.

- My sister purchased a modern day version of a player piano that plays via a digital signal transmitted from her entertainment center. Pulled up the frequency and listened to the soothing sounds of it's digital signal (I know that's pathetic but it was something to do).

Keep in mind that you have to be fairly close to the transmitter to pick out the frequency. You don't use a freq counter to pick up mountain top repeaters.

Not sure if you have a Southwest Frequency Directory (www.scannerstuff.com)
but all the SID channels are in there under Mesa Police.

SID-1 is 867.1125, and SID stands for Special Investigations Division. SID-1
is definitely the most active, but 2 and 3 occassionally get some good surveillance
type traffic on them. As best I can tell, SID-1 may be the only one that
is normally monitored by a dispatcher, so traffic stops that the SID guys
make should all be on SID-1.

From: freqofnature
Topic: 2441 Message: 2453

In my understanding (Please excuse my ignorance, I'm not in the public-safety profession and fairly new to radio) brevity codes (10-codes, signal codes, etc..) were established (I'll spare you the radio history lessons) as a means to communicate a message as clearly as possible in the least amount of time as possible.

While the goals of adopting brevity codes was clarity of transmission in the least amount of time there is the added benefit of confidentiality. An example would be 10-35.

You might want to check out this (somewhat dated) article from Dispatch Monthly.
http://www.911dispatch.com/information/tencode.html

On a side note: What really pushes my buttons is when I hear rumors that local or state public-safety agencies are installing digital and/or trunked radio systems to keep the public from listening to their communications. Such rumors should be (In my humble opinion) left to the super-market tabloids.

> I've never had an experienced dispatcher tell me codes are simply to keep
> scanner listeners and bad guys from understanding the message.

I don't think that we care that much about scanner listeners, but there is definitely an issue of officer safety involved that, perhaps, some of you don't think about.

<ON SOAPBOX>

Many (most?) criminals don't actively listen to police radio transmissions, except when an officer is standing next to them. In that case, we (dispatchers) want to make sure that we can tell the officer critical information and have him recognize the importance of it before (even a split second before) the criminal can decipher the message.

Almost all agencies have a code that means "Can I tell you something important without others hearing?" Whatever that code is, ALL officers and dispatchers had better understand the implications. I heard a trainer recently beat up on a dispatcher trainee very strongly for giving an officer warrant information about a suspect without first inquiring about the ability to receive the information confidentially. Why, you say? Well, the bad guy knows he's got a warrant, but will try to bluff it out. As soon as he knows the officer knows, he's liable to take action, possibly assaulting the officer in order to flee. We want the officer to have the jump on him. Even if we've asked the officer 10-35 (are you clear for confiential information). Given that premise, let me ask you which makes more sense for us to say: "Use caution, your subject has a felony warrant for assault on an officer" or "10-30. 10-51 246"?

One of the drawbacks of this is that you have to use the codes all of the time to remember the obscure ones. The 246 code (assault on an officer) is not one of those. I might be more tempted to use 245 (ADW) because I'm reasonably certain all of our officers know it. If we seldom used type codes and usually said "Assault with a weapon", then we'd be in trouble when we did need to use the code, either for confidentiality or for brevity.

Besides a small number of 10-codes, all MCSO deputies have to know the offense and report type codes, because they have to clear a call with the type code for statistical reasons. So why shouldn't I use the type code when dispatching the call if it clearly says what the call is about? It saves air time. If there's any chance it might be misleading, or not enough, then I can always amplify. For example, a 418 (subject with a weapon) needs clarification if we're talking about a dispatching a call...we need to say what kind of weapon. But if I need to warn an officer already on scene: "10-30, the 101 is 418" works quite well. It gets the point across very quickly, and perhaps, won't be understood as quickly by

citizens, bad guys, or any non law enforcement persons hearing the transmission.

AZ DPS, I think, even takes it further. The DPS dispatchers hot tone (with a unique warble tone sequence), say it in code (10-38 F or M), and include the location for other officers to respond for backup. This unique tone is used for no other purpose that I know of. I'm sure you've heard it on your scanners, and might even be a little annoyed by it because scanners usually don't care whether an officer has a hit or not. But I GUARANTEE THAT THE OFFICERS CARE. That tone puts anybody who is out with a suspect on instant alert.

So, I'm sorry fellow scanners: it's not a humorous attempt at hiding information -- it's a deadly serious attempt at giving a law enforcement officer one tiny bit of an advantage. And, IMHO, anybody who thinks its humorous hasn't had to be face-to-face with a criminal.

2455. RE: [ArizonaScanner] Re: Jargon

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-11 22:35:36 UTC
From: Dan Rollman
Topic: 2441 Message: 2455

Dan,

I'm not sure anyone was suggesting the use of radio codes for officer safety was humorous. If they were, shame on them. I think the persons message earlier regarding the ease with which a scanner listener can figure out what a message full of radio codes truly means merely points at exactly what you were getting at: Some radio codes have a very different purpose beyond "scanner listeners", and that's the suspect within earshot of the officers own radio.

As for the hot tone for 10-38's, I've talked to many DPS officers who absolutely hate that hot tone (for warrants). Simply, they say a big loud beep over the radio yells to a suspect "be advised, your suspect has a warrant for assault on an officer" just as much as plain language does. They say they listen to their radio for this very reason on a traffic stop, and don't need a tone to hear 10-38 (a tone which gives the whole message away to their violator in the same instant). I've also been told DPS is considering doing away with tone for hits entirely, especially on 10-38M's (on felony's, it's just that much more important to make absolutely sure the officer gets the message even if the suspect does too, I suppose).

So, there's merit in the agencies that (perhaps with good reason) don't hot tone their hits.

---Original Message---

2456. DTMF Page Tones for Firebird

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-12 10:19:32 UTC
From: jhguetherman
Topic: 2456 Message: 2456

In the past, I've heard Phoenix police dispatchers put out what sounds like a DTMF sequence, in an attempt to "page" the air unit. Does anyone know what the sequence is? What kind of decoder do the helo's have that will alert them to the page? Is it (similar to) a pager, or a module installed in their radios?

I was thinking that since some Ham radios can be set-up to alert you when a particular DTMF sequence is transmitted, you could silently monitor a channel untill the air unit was paged. Which would indicate a call needing air support, which of course is usually something major.

Thanks.

2457. Just scanning around

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-13 05:09:23 UTC
From: jhguetherman
Topic: 2457 Message: 2457

I've scanned around my neighborhood in the past, and here's what I
have compiled:

Arby's: 85th Ave. and Grand Ave.....35.020-154.600 Duplex (Closed)
91st Ave. and Peoria Ave....Unknown

Burger King: 67th Ave. and Peoria Ave....30.840
91st Ave. and Peoria Ave....33.400

Dell Taco: 91st Ave. and Peoria Ave....468.4875

Fazoli's: 91st Ave. and Peoria Ave....469.0125 (PL 94.8)

Jack in the Box: 75th Ave. and Cactus Rd....Unknown
91st Ave. and Olive Ave....Unknown

Kentucky Fried Chicken: 67th Ave. and Peoria Ave....33.160
91st Ave. and Olive Ave.....33.400

McDonald's: 67th Ave. and Peoria Ave....469.0125
85th Ave. and Grand Ave.....30.840
91st Ave. and Olive Ave.....469.0125

Taco Bell: 67th Ave. and Peoria Ave....33.400
83rd Ave. and Peoria Ave....35.020

Wendy's: 83rd Ave. and Peoria Ave....33.400

Fry's Food Store: 91st Ave. and Olive Ave....Unknown (467 MHz?)

Home Depot: 91st Ave. and Peoria Ave....Family Radio Service?

K-Mart: 91st Ave. and Peoria Ave....Family Radio Service?

Target: 91st Ave. and Northern Ave....Unknown

Wal-Mart: 83rd Ave. and Peoria Ave....154.570

Nursing Home: 91st and Peoria Ave. area....MURS 151.820
91st and Peoria Ave. area....FRS ch. 13 - 467.6875

There's a couple of other places in the area that may be using
radios. At least one other fast-food place (Popeye's Chicken?) at
67th and Peoria Ave's (NE corner) may have a drive-through. The
Safeway food store at the same intersection (SE corner) may have them
for internal purposes. As may the Albertson's food store at 75th Ave.
and Cactus Rd. I don't believe the 75th Ave. and Cactus Rd. Fry's
food store has any. (The 91st Ave. Fry's food store has radios, I
just haven't found the channel yet. Appear to be Motorola Spirit-

types.) The Dairy Queen at 87th Ave. and Peoria Ave has a hard-wired intercom for it's drive-through. As may the two Jack in the Box fast food places, I haven't been inside to check.

I'm just presenting the info for anyone who may be curious and interested enough to check out their own neighborhood for any two-way radio use.

I searched the bands 30.000-50.000 MHz; 150.000-152.000 MHz; 153.000-155.000 MHz; 455.000-460.000 MHz; and 465.000-470.000 MHz. You might also try some wireless microphones at 169.445; 169.505; 170.245; 171.845; and 171.905. (When searching 30-50 MHz, break it down into 5 MHz blocks. Much faster to search the range.)

From: jhguetherman
Topic: 2457 Message: 2459

Upper 467 MHz range, I believe. There's some Dot/Star channels in the 467.750 to 467.925 range. It may also be capable of 464.500 and 464.550, and possibly the 469.500 and 469.550 channels as well.

The radios are just used so infrequently, and I haven't taken the time to just sit down there long enough to try to catch them. Although I do know one of the head clerks who works the late shift. She may allow me to key one up some night so I can catch it with my scanner. I also know the store manager. I work for Fry's myself, and have worked under both of them.

The drive-thru's are so much more active, it doesn't take long to find them. (Except that darned Arby's one.....they use headset's, but I can't find them.)

Thanks, Tracy.

Hey guys... in case you'all might be interested, here's a list of
freqs for MOTO SP10 and SP21 handhelds... these are the type most likely
to be carried by most of the folks in places like Walmart and Home Depot
ect.... enjoy!!

SP10's VHF and UHF (USA)
151.625 462.575
151.655 462.625
151.685 462.675
151.715 464.325
151.775 464.500
151.805 464.550
151.835 464.825
151.895 467.7625
151.925 467.8125
151.955 467.850
154.490 467.875
154.515 467.900
154.540 467.925
154.570 469.2625
154.600 469.500
158.400 469.550

SP 21'S... CH 1-16 ARE WIDE BAND, 17-40 ARE NARROW
BAND
these are the USA versions, in channel order:
464.500 151.625
464.550 151.955
467.7625 154.570
467.8125 154.600
467.850 151.655
467.875 151.685
467.900 151.715
467.925 151.775
462.575 151.805
462.625 151.835
462.675 151.895
464.325 151.925
464.825 154.490
469.2625 154.515
469.500 154.540
469.550 158.400

ch 17-32 same as 1-16 just narrow band
starting at ch 33:
462.7625 151.700

462.7875 151.760
462.8125 151.5125
462.8375
462.8625
462.8875
462.9125
464.4875

> major.

I've noticed that PPD only uses the DTMF tones when the can't get the attention of the air unit thru conventional transmissions. If they used the tones all the time, we'd be home free. But they don't ... gut feel is that they use the DTMF less than 5% of the times that they need air support. The rest of the time, the air support is reachable on the radio or known to be down for maintenance.

Good idea, though.

> Tnx.

1xx is day shift 6am-4pm, I believe. 2xx is swing, 2pm-12am I believe, and 3xx is nights from 10pm to 8am I believe. 3 overlapping 10 hour shifts. They should be using Patrol 10 for day shift, Patrol 20 for swing, and Patrol 30 at night. I haven't noticed a discrepency in that, as I don't hear them on the air much. George units are the sergeants. 10, 11 and 12 are daytime. 20 and I think 21 are swing, and as far as I know, George 30 is the only graveyard sergeant. There may be a George 31. I'm going to concentrate on listening solely to Peoria PD for awhile when I'm home/awake, see if I can catch anything different.

The Charles units I'm hearing on occasion (not Charlie, Charles) sound like regular officers responding to calls. Not detectives. CID = Criminal Investigations, right? David is the general investigations detectives. Victor may be the vice detectives.

Adam 1/2/3xx are two-officer units. Bravo is a reserve officer, I believe. Edward are the school resource officers, DARE/GREAT programs. I haven't heard King-91 in a long time, he may be on days only. Mary 50 is the motor sergeant, and Mary 55x are the motor officers. William are the bike patrol officers, I believe. Zebra is the T.O.U. (SWAT) team.

I only ran into Patrol 30 by chance one day, as he was collecting up the donated food from the Fry's food store I work at around Christmas. Last I saw him may have been when they were showcasing the new command van a couple of years ago when they first got it. Either that, or when he was working off-duty during some road construction at 75th and Cactus one day. (Ocean units are off-duty.) That was also several years ago.

I wonder how forthcoming they would be if I walked into the station and asked the lobby desk for info on their unit id's and such? I wouldn't have a problem letting them run my driver's license.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-15 09:35:42 UTC
From: jhguetherman
Topic: 2465 Message: 2465

Dan, around midnight Saturday night/Sunday morning, I was hearing some search comms on MCSO Search 8, out at the White Tanks Park. Fell asleep before I heard the outcome. Are any details available?

I heard command, 5 ground search teams, and Fox 1. Some of the ground teams were operating simplex on the output, and some through the repeater. 1 or 2 of those teams sounded better than command did. Better S/N ratio into the repeater.

Heard two park police officers make mention of it on Parks VHF 159.390 Sunday morning, but neither knew the outcome.

2466. New Scanner Problems (Operator Error)

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-16 01:53:41 UTC
From: hazguy2001
Topic: 2466 Message: 2466

I need some help. I purchased a BC780xlt scanner from a local Phonix retailer. To complain about the dealer would solve my issue so I'll let that part go.

I would like to tune into Scottsdale, so I have my Southwest Directory (it is in need of the latest updates) and I have the frequencies from this group and I can not get the trunk tracking to work. I think I need the control frequency for Scottsdale. I have the frequencies on Bank 6. I have the trunk tracking set to Motorola II (800). I hve gone to every frequency and pushed the trunk button. The only thing that happened was the scanning speed slowed down. I do not receive anything. Can some one offer some more complete directions?

Thanks

2467. DPS Info

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-16 04:04:10 UTC
From: foresigt
Topic: 2467 Message: 2467

I have a question about the DPS Metro Channels.

The new SW Frequency Directory shows that Metro East and Metro Central are both 460.325 with different PL's. I currently have Metro East programmed into my radio with a PL of 100.0. But, I don't seem to miss any traffic this way . Is the 151.4 PL on Metro West actually being used?

I'm going to re-program my radio and want to make sure they are correct before I give the shop the list to program. Before anyone panics, I'm only putting in the receive. A radio still received better than any scanner.

That was a typo on Page 13 of the update booklet. All the PL's are correct. Just replace Metro East's frequency with 460.400, instead of 460.325 (which is Metro Central).

From: n7djr
Topic: 2470 Message: 2470

I recently moved to Gilbert and have trouble almost all over Gilbert receiving a good strong signal with even different radio's. I see they have a transmitter on South Mt rated at 300 watts but I don't think they are using that site for some reason? I can see South Mt from home I live near Val Vista and Warner. I receive Mesa and other services fine just Gilbert's TRS comes in really bad?
Anyone else having trouble getting a good signal in Gilbert?

The trunked system is actually owned and operated by Chandler, and so the tower is SW of Gilbert in Chandler. South Mtn is not used as best I know, it's just also licensed there.
Motorola single-band trunked radios just receive better than all-band scanners with cheap antennas, so often times scanner listeners experience significantly more trouble with trunked systems than officers do.

One thing that will help you guys some is an antenna specifically for the 800 MHz band, if you're not already using one. This will reduce the quality of non-800 signals (like Gilbert FD), no doubt, but it's worth a try.

Here's a couple I really like.

Base model: http://www.grove-ent.com/ANT23.html
Handheld model: http://www.grove-ent.com/ANT22.html

Good luck!

2473. Speech inversion descrambler

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-16 17:42:06 UTC
From: macgyvergtp
Topic: 2473 Message: 2473

My scanner has a discrambler, it is a Alinco DJ-X3 & has some silly bug detector too. I was wondering are there any frequencies here in Phoenix that use this technology? When I use it on a non-scrambled channel, it just seems to make a high pitch squeel over the transmission, but it is still understandable. Just trying to get the most out of the scanner, but I don't know what this whole speech inversion thing is all about, can someone explane it to me?
Thanks,
Sean

2474. Re: [ArizonaScanner] Question about Gilbert's trunked system

From: August Hoecker
Topic: 2470 Message: 2474

I agree with Dan completely. In about 90% of the cases it seems folks
are trying to receive these ultra UHF (high path loss) signals using low
gain, no gain or even negative gain (the case with most portable scanner
antennas) antennas and have poor results, then wonder why.

In addition to the Max antenna Dan suggested which is a rather wide band
(that's good) but unity gain (not so good)
unit (but very good as a portable antenna substitute) I might also
suggest you consider using a yagi directional antenna for your home
station. They are rather small and easy to mount and will provide you
with 10 to 14 db of gain in one direction only, let's say between your
house and Chandler with great results.

I have purchased several of these antennas on Ebay for $25 to $35 used
but in good shape. Just look under Yagi as your search word and look for
a frequency range in the 850 MHz region. With any base station antenna
at these frequencies you must use low loss cable between your antenna
and scanner such as Belden 9913F7, JSC 3810 (the best buy) or FMR 400 if
your cable run is much over 25 feet or so. It will be worth the 70 cents
to $1 per foot price to save those db's! These used antennas sold at
approximately $150 or more when new and are industrial strength!

Trust me a yagi antenna at these low used prices is worth the investment
in scanner enjoyment.
August

You might try some of the Family Radio frequencies.
Some of those units use voice inversion. It will sound like Donald Duck talking on the channel.

Channel Frequency Channel Frequency
1 462.5625 8 467.5625
2 462.5875 9 467.5875
3 462.6125 10 467.6125
4 462.6375 11 467.6375
5 462.6625 12 467.6625
6 462.6875 13 467.6875
7 462.7125 14 467.7125

Also some 49Mhz phones use it.
Though, I don't think you are allowed to listen to those anymore.

Take a look at:
http://www.ramseyelectronics.com/sitepages/pdf/hmanuals/Ss70a1-3.pdf

Ramsey sales a kit to do inversion, and, the manual has some good info.
Michael

My first try doesn't appear to have worked, so I apologize if this is a double.

In addition to the FRS channels, try scanning between 451 and 453 MHz. I have heard some voice inversion scrambling in that range. Most likely taxi cab companies trying to prevent their competition from hearing their calls, and then getting to the location first and "stealing" a fare.

Much of th 451 to 453 range is occupied by public utilities, small water companies and the like, and they do a lot of SCADA and other data-control type transmissions (sends out funny sounding data packets for meter levels, opening well gates, etc.) in that range as well. Keep that in mind when hearing strange signals in that range.

Thanks for the list, Don. I'll use them in my scanning.

Found Popeye's Chicken at 67th Ave. and Peoria Ave.: 469.2125, constant unmodulated carrier when idle, a tone beeps when a customer pulls up to the order board, then you hear the full-duplex link activate.

Somebody was also using 154.570 at that intersection. Probably paired with one of the low band frequencies, (could only hear the clerk), but I didn't try to see which one, and didn't hang around long enough to try to figure out which place it was by what the drive-through clerk was saying.

Target at 91st Ave. and Northern does use radios, but couldn't find them when I was there earlier today. The antenna suggested UHF, and I was just scanning through the band, not using Don's list. Didn't see or hear any radio's at K-Mart at 91st and Peoria shortly after I checked Target. (Actually made a purchase at both stores, in case you were wondering if I just went in to search for their radio channels.)

Michael,

Was that this afternoon? On my drive home from work, I was listening to the ATC activity in the Tucson area. I heard a lot of activity to the SW about a Military helicopter trying to get in contact with a Lifenet heli that had only VHF capability. I believe the freq they gave was 135mhz. Unfortunately, I never heard anything.

John

Albuquerque Center just advised Air Force Rescue-224 to contact them. They called on 243mhz.
All range activity seems to have stopped.
The only planes I have flying are PUMA-01 and-02, the CAP aircraft. They don't seem to be doing any SAR activity.
They are in the Sells MOA on 295.9mhz and 271mhz

UPDATE: The Air Force is reporting that two A-10s were involved in a mid-air collision near Douglas just after 3 p.m. Thursday.

The planes were assigned the 355th Wing based at Davis-Monthan Air Force Base in Tucson and went down about 25 miles east of Douglas.

According to Marie Wurth of Sierra Vista Regional Health Center, one of the pilots was flown in by helicopter. She says doctors are evaluating his condition, but his injuries appear to be minor. Wurth said while she cannot release the pilot's identity, she can say he is in stable condition.

Master Sgt. Dan Carpenter from Davis-Monthan Air Force Base says a search and rescue crew is on the way to the crash site. He said he has no information about what caused the planes to go down.

The A-10 was designed specifically for close air support and was used in the Gulf War to attack Iraqi tanks.

The 355th Wing's missions are to train A-10 and OA-10 pilots and to provide A-10 and OA-10 close support and forward air control to ground forces worldwide.

Hi Folks,

Just a reminder, please try to remember to cite large chunks of information (or in this case, entire stories) that you take from other sources so others know who's info it is. No problem relaying info from places like 3TV's website (www.azfamily.com) like in the email below, but please mention where it came from, especially when it is a direct cut and paste.

Thanks everyone!

Just quickly reviewed my MOA recording for today. I was able to catch some of the related SAR activity after the fact. They had an A-10 orbiting over DM at 17,000ft providing radio relay. Some chatter about whether the pilot was able to call anybody. Another A-10 driver talked about 2 aircraft being down and asked if he did right to relay the information, including callsigns. At least one Customs aircraft was enroute, and would come up on the Tombstone frequency or 282.8mhz. This is in addition to what I have already reported.

I have a lot of interference and an open carrier, so unfortunately, a lot of the interesting comms are lost. Did anyone else record Tombstone MOA today? Or perhaps, Customs in AZ?

Thanks,
John

I would like to invite all of you to join my new Yahoo Scanner News Story Group.http://groups.yahoo.com/group/Scanner_News_Stories/

This group allows people from across the U.S. & Canada to post interesting news articles from Radio, Print, or TV Media that represent some part of the Scanner Hobby.

You will see what I mean by the first posting that was made.

I think this can be a very interesting group with the amount of activity that goes on throught both Countries.

Sorry for cross posting through many of the groups, but with a group like this, I wanted to try and reach out to as many people as possible that are interested in the scanner hobby.

So please don't flame any of the groups for this posting. Thanks for your understanding.

I was listining to Phx PD 450-7 the other night. I heard them talking about interferance from channel 8. The SWFD doesn't list any info on 450-8 and I don't have time to search for it.

Does anyone have any info on it? Is it just a simplex like 450-7 used to be?

I was listening to 450-7 the other night, and they were complaining about 150-9 bleeding over onto their channel and vice versa. I don't think there is a 450-8, but that Phoenix is having problems with their patches.

2490. Fw: Uniden 300 Portable

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-21 05:39:14 UTC
From: Robert Benne
Topic: 2490 Message: 2490

I saw in the latest Galls Catalog that they carried a Unden 300 Truck Tracker Scanner. Description sez it can track Motorola Type I, Type II, Hybrid, Smartnet, privacy plus and EDACCS analog trucking systems. When I went to the Uniden Web site for more info I do not see the product listed. Anyone thoughts on the capabilities of this unit vs. the 780 for use in the Phoenix/Scottsdale area?

A few nights ago I heard the air unit on 800 (VHF) ask someone to go to 450-7, and then tell them they were getting to much inteference "on 8", not from 8. At least that's what I thought I heard. Wonder if we heard the same transmissions? It was my impression he was compaining about VHF Ch8, and that's why he wanted to use 450-7. I will check on a 450-8, though.

895? Or 780? The 895 is nothing more than a base/mobile version of the 245, if I remember correctly. The 780 is the latest trunking scanner from Uniden. It tracks Motorola, EDACS and the GE/Johnson mode (the name of which slips my mind. starts with an "L" I think.). I'm in Las Vegas, so I'm not sure what systems are in use in the Phoenix/Scottsdale area, but last time I checked they were using a Motorola system, so any of the trunking scanners should be okay on those. Hey, youse guys down in de Valley! How'zaboudit? What's the scanner of choice down dere? Has MCSO or PPD or anyone else gone digital like they did down in Tucson? Help this poor guy out, okay? Okay!

The Bearcat 780 is the best choice for a base / mobile scanner. As Glen stated it will track Motorola, EDACS, LTR, and scan conventional at the same time. Along with the PL & DPL decoding, alphanumeric display, programmable step sizes, and delay features among about 4 more pages of things I am forgetting it is really the best scanner on the market today. It can also be programmed and controlled by PC by about 1/2 dozen different programs ranging in price from free to about $80.

As for the hand held aspect, the 245 is about the best choice in my opinion. Not much in the way of features just a dependable scanner that will track Motorola, EDACS, and scan conventional at the same time. Some scanner users may swear by the Radio Shack alphanumeric handhelds (Pro-92 & 93) but I personally didn't care much at all for my Pro-92.

MCSO has already gone to a 800mhz digital radio system. The city of Scottsdale is supposed to do the same shortly. Weather they will buy space on the MCSO system or use their own is uncertain. The City of Phoenix and Mesa are slated to go on-line with a combined 800mhz digital system as well in '03. The only scanner on the market today that I have heard will have a chance in monitoring digital communications is the BC780xlt with an add-on board. Uniden is supposed to release the BC280d ? or some hand held model resembling the 780xlt that will be digital capable with an add-on board. We haven't seen either of these models yet so don't hold your breath.

So to draw this response to a close, I would suggest the 245xlt for your hand held monitoring needs and if you are feeling an annoying bulge in your wallet the 780xlt is well worth the money. I would also advise staying away from Galls for your scanner purchases, Scanners Unlimited (not a plug) usually has better prices and their customer service is also very good.

Hi Glenn,

895 and 245 are somewhat different in features, etc. For example, 895 does not do EDACS or 900 MHz Motorola (just 800), 245 does both. 245 does not do CTCSS, 895 does.

The 780 does do "LTR" which covers "most" EF Johnson systems, but not all. For example, Pima County SO and the City of Yuma both have EF Johnson systems that are not traditional LTR, and cannot be tracked (yet).

As for Tucson, the only major local agency there using digital is Tucson PD, and they only use it sometimes, and only on Ch7, 8, 9, and 10 (which are SWAT, surveillance, Major Offenders Unit, etc.). All regular patrol traffic, and even SOME of the surveillance and special ops type stuff is still analog (and will remain so indefinitely). Tucson is working towards an Astro digital trunked system, but they are like most municipalities implementing new radio systems (they say "by next year, for sure!" for 3 to 10+ years). :)

Tucson has very little trunked stuff. Marana PD is EDACS, so a 245 or 780 is useful for that. If you don't listen to Marana, just about anything will do the trick in Tucson.

In the Phoenix area, only popular EDACS system is Sky Harbor Airport operations. Those valley agencies that are trunked, for the most part, are Type II analog (except MCSO).

But of course future Phoenix system will be digital... someday.

Dan

Hi Charles!

I agree with you on the 780 and 245. The 245, as you said, is not much for whiz-bang features (like some of the RS models), just a solid workhorse of a trunktracker scanner, in my oppinion.

City of Scottsdale no longer has their own system. They are on the County system now, in analog mode. Got them a (little) better coverage in some of their dead spots, since they have sites on Humboldt and Mt. Ord, in addition to Thompson Peak of course. Most of their officers that have new radios have the XTS3000, so they could go digital if they choose, but at the moment all of their talkgroups have been set up in an analog-only block. They have only <2> special investigations talkgroups that are digital (up in the 43000's with MCSO).

Also FYI, the BC780XLT will NOT do digital. If Rich Barnett and company ever come out with some kind of add-on board, maybe. But as far as Uniden is concerned, the 780 will be replaced by the 785D (which will do digital with a card, purchased separately, that pops in the back like a floppy disk). The 785D will have a twin in the handheld version. A mock-up of the 785D was present at CES a couple weeks ago. It's a matter of time, but I won't go naming any time, because after all this is Uniden. :)

Dan

---Original Message---

The Bearcat 780 is the best choice for a base / mobile scanner. As Glen

stated it will track Motorola, EDACS, LTR, and scan conventional at the

same time. Along with the PL & DPL decoding, alphanumeric display, programmable step sizes, and delay features among about 4 more pages of

things I am forgetting it is really the best scanner on the market today.

It can also be programmed and controlled by PC by about 1/2 dozen different

programs ranging in price from free to about $80.

As for the hand held aspect, the 245 is about the best choice in my opinion. Not much in the way of features just a dependable scanner that

will track Motorola, EDACS, and scan conventional at the same time. Some

scanner users may swear by the Radio Shack alphanumeric handhelds (Pro-92 & 93) but I personally didn't care much at all for my Pro-92.

MCSO has already gone to a 800mhz digital radio system. The city of Scottsdale is supposed to do the same shortly. Weather they will buy space on the MCSO system or use their own is uncertain. The City of Phoenix and Mesa are slated to go on-line with a combined 800mhz digital system as well in '03. The only scanner on the market today that I have heard will have a chance in monitoring digital communications is the BC780xlt with an add-on board. Uniden is supposed to release the BC280d ? or some hand held model resembling the 780xlt that will be digital capable with an add-on board. We haven't seen either of these models yet so don't hold your breath.

So to draw this response to a close, I would suggest the 245xlt for your hand held monitoring needs and if you are feeling an annoying bulge in your wallet the 780xlt is well worth the money. I would also advise staying away from Galls for your scanner purchases, Scanners Unlimited (not a plug) usually has better prices and their customer service is also very good.

2498. Arizona Scanner Club Meeting SATURDAY!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-25 05:54:32 UTC
From: Dan Rollman
Topic: 2498 Message: 2498

Many have asked that I send these announcements a day or two before the local scanner meeting actually takes place, SO... :)

Incident Command Page (ICP) will be sponsoring it's monthly Phoenix scanner hobbyist get together this Saturday, January 26th 2002, from about 6:30 to 8:00 PM at Fudruckers restaurant on Highland just east of the A-51. These monthly gatherings are very informal. Grab some food and hang out for a while with other area scanner hobbyists and public safety enthusiasts. ANY and ALL scanner listeners are welcome, whether you are a member of ICP or not. Additionally, Scannerstuff will have Southwest Frequency Directory 6th Edition books available for purchase for a special price of $20 (normally $30), available at the meeting on Saturday only. See http://www.incidentcommandpage.com/ for more info on ICP and for meeting directions.

So come on out and ask questions of fellow hobbyists, share your radio info, and just hang out for burgers and radios. :)

Dan Rollman
Scannerstuff, ICP Member

2499. A $28 Discone!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-26 08:17:05 UTC
From: k1fhz
Topic: 2499 Message: 2499

All of those interested in discone antennas may have interest in this "Super Discone" model I just purchased from Antenna Warehouse. I wanted to give you my first impressions of their "LOW COST" discone antennas to those who asked. It comes in two different models. The "Standard Discone" which is similar to the $69 Radio Shack unit but constructed more ruggedly and the "Super Discone" model which comes with an additional top loading coil and a 5 foot whip attached to it.

The price for this antenna is a wonder. The standard model is priced at ONLY $28 and covers a frequency range from the VHF aircraft band to 1300 MHz on the top end (?) as also claimed by the Radio Shack unit as well but for more than TWICE the price.

The Super Discone will receive frequencies down to 25 MHz at a cost of $40! If you are interested in low band VHF in the 30 to 50 MHz range this extra $12 is more than worth it. Also, if you purchase the Super model and at a later date decide you no longer require the VHF Low Band coverage simply remove the whip portion of this antenna and you now have the standard model.

I have just put it together and placed it on a test mast only 15 feet above ground but it is working very well. The reception on 42 MHz is about equal to a 42 MHz ground plane antenna I have mounted about 5 feet higher than the Super Discone. If I remove the whip from the top of the super discone the Low Band reception just drops out completely from a CHP transmitter located about 50 miles away on 42.56 MHz!

On the 150 to 170 MHz VHF high band again the reception is good but just a bit less than my tri band ground plane antenna which has a 3 db gain at these frequencies. I am sure this is making the difference.

I tested the antenna at 223 MHz on both transmit as well as receive with great results! From 225 MHz on up through the 900 MHz range it outperformed my tri band ground plane except from about 450 through 470 MHz where my Tri Bander has 5 db of gain and out matched the Discone as you would expect. In the UHF Mil Air band it seemed to work very well but I only listened to 10 or 12 different stations/AC which were loud and clear. I believe this is where this antenna will earn its cost as small as it is! I have not as yet swept the antenna using my analyzer but will do so when I get it mounted atop my 37 foot tower.

At this point, for only $28, for a unit that looks better than the Radio Shack product at a cost less than half including the small shipping fee and no sales tax this "Skyhook" is a super bargain. I know it will offer good general coverage reception from 125 MHz on up

for the standard model with greatly improved low band coverage for the Super Discone model at a very small increase in cost.

Again when get it mounted using some new 3810 coax I will give another analysis of it and will have had more time to use it by then. One additional comment reference the folks at "Antenna Warehouse" in Camanche, IA. They just treated me great via the telephone and emails sent. I had a small problem with a missing metric nut and they express mailed me two of them that same day and called back a few days later to be sure all was well.

At $28 ($40 for the super discone model) this is the best antenna bargain I have found and you are hearing this from a person who is not fond of this antenna design.

If you do not own a discone at this time this is a way to see what you have been missing without having to spend your kids college fund to try it out.

From: Dan Rollman
Topic: 2500 Message: 2501

Hi Mark,

No problem, this is the place for scanner questions related to Arizona, whether they've been covered before or not! :-)
Pima County was on an EDACS system from 1990 to 1998 (they were one of the first major EDACS agencies in the country). They switched in early 1999 to an EF Johnson Multi Net II (which is not regular LTR, and cannot currently be tracked on any scanner) for various reasons (namely, Y2K issues in the site-linking components of their multi-site system). So, in short, they were on an EDACS system in the 90's, and an LTR system is not even part of the equation. They got a bunch of new frequencies in conjunction with the switch in 1999. Although their system cannot currently be "tracked", it remains in analog mode, so you can hear the audio. You'll just find that conversations hop from one frequency to another.

I'd recommend taking a look at www.scannerstuff.com to see if the Southwest Frequency Directory might interest you. I edit the book, with contributions from hundreds of other very experienced scanner listeners and public safety professionals right here in our state, so it's locally produced, with a local focus. I'm sure you'd appreciate it's accuracy, depth, and completeness over other national database print-outs like Police Call.

2502. Tucson Trunking

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-01-29 03:30:15 UTC
From: Scott Coleman
Topic: 2502 Message: 2502

Hello, all!

As the happy owner of a PRO-93 trunk tracking scanner, I've been looking for some trunked systems to monitor here in the Tucson area, so far with no success. I first tried to monitor Pima County's system, but for obvious reasons (as I found out later) it didn't work; apparently Pima County uses an E. F. Johnson Multi-Net II system, which no current scanner can track.

Next I tried the Central Arizona Project system, again with no success. Either there's not a lot of activity on that system, my PRO-93 is broken, or I'm doing something wrong. :(

I'm hoping that someone with a bit more experience monitoring trunked systems in the Tucson area can point me in the right direction. Which system(s) *should* I be able to track? Knowing which systems are worth pursuing and which I should ignore will help me out a lot.

Thanks for your kind assistance. :)

The City of Mesa has their own municipal security for city owned assets and buildings. Does anybody know what freqs this department uses. I haven't found it listed in the SWFD as "Municpal Security" per se. I do know that they use PD once in a while to call for officers but also know they use thier own freq.

Give 151.310 a shot. This is Parks & Rec, but at night I hear what sounds just like security activity. Don't know if it's limited to parks & rec security, or if it is the entity you're looking for.

Aside from that, I'd try the other City of Mesa frequencies listed in SWFD, especially the "Various Services" listings that don't have other city departments associated with them in the book. Let us know if you find anything else!

Anyone else know more?

Dan

The county has their own version, as well, don't they? Talkgroup 11248, isn't it? What other cities have their own "in-house" security, and what law enforcement powers do they have? Firearms qualified? Power of arrest?

Along those lines, which Parks and Rec rangers/police have what powers? I know that the county's Park Police are fully qualified LEO's. http://www.maricopa.gov/rec_svc/park_police.asp

Phoenix Park rangers are un-armed, what powers do they have? Glendale? Mesa? Tempe? Anyone else?

This is supposed to be a repeater output (165.4125 input) for the Administration Office of the United States Courts in Phoenix. It was mentioned in "The Fed Files" column of the February issue of "Monitoring Times", and the author, Larry Van Horn, wants to know if anyone can hear any comms on it. My PRO-2020 base scanner has a birdie/open carrier on it. My PRO-43 handheld does also, but weakly, and only in certain spots of my home. The same with my dual-band IC-W32A handheld.

If anyone hears anything, post it here, and you can also email Mr. Van Horn at larry@....

165.4125 is active now at 00:28 zulu 30 jan 02 in snowy southern arizona its a repeater used by border patrol and/or customs. currently keeping vehicles under survailence neat "keno". (sounds like keno springs near nogales) at the same time i hear static on 162.025 but no voice. the 165.4125 signal is about S 4.5 and the noise level is about S 1.5. Mart, located about 10 miles southeast of sierra vista az. using winradio and discone and mounted about 30 ft high..

To John and the group... as most of us are aware, 165.4125 is an
OUTPUT freq for US Customs... I wonder if Mr. Van Horne is aware of
this???
BTW... I dont have anything listed for 162.025 down this neck of
the woods (Cochise county).

2513. Arizona Lowband Activity?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-01 03:42:49 UTC
From: jhguetherman
Topic: 2513 Message: 2513

I'm looking through my SWFD, and I see the State has six lowband channels: three for the Agriculture dept., one for State Land, one for Law Enforcement Interagency, and one for the MVD. Cochise County has one for county services. Graham County has 2 for road maintenance. Maricopa County has one for emergency management, and the Sun City and Sun City West Sheriff's Posse's had a total of 4 for their operations. Mohave County has one for animal control, and one for emergency services. The Navajo Nation goverment has 3 for a school. The Southern Arizona Rescue Association in the Tucson area has two channels. The Patagonia town goverment in Santa Cruz County has one channel. The Yavapai County Sheriff's Jeep Posse has one channel.

That's a total of 23 channels. How many of these are still in actual use? Can anyone confirm that they are active, or are capable of becoming active? (In other words, being held as a back-up.)

Thanks Donnie. Apparently, the listing came from Tom Kneitel's "Top Secret Registry of U.S. Goverment Radio Frequencies". It listed:

162.025/165.4125 Phoenix, AZ.
164.200 (Simplex) Asheville, Bryson City, Charlotte, Shelby, and Statesville, NC.
170.575/166.100 Atlanta, GA.

You might try monitoring the other channels as well, se what you find, if anything. Go ahead and email Mr. Van Horn, and let him know about 165.4125. larry@...

Hey John,

Nearly all of those are no longer used. I've gotten a ton of notes over the past year or two about low band agencies that moved to high band or other systems. In fact, DPS's Comm Tech's have removed most of the low band infrastructure (like State Land and MVD, for example).

I am out of town and don't have my resources with me, but MVD now uses strictly the ADOT trunked system in the Phoenix area, a new VHF repeater for the Northern end of the state, and another VHF system for the Southern end of the state. Agriculture Department uses the VHF system listed in SWFD-6 I beleive as "Livestock Commission" (which is part of the Ag Department... "Cow Cops and Cactus Cops, as they call 'em, are now sharing one VHF system). Sun City West Posse is on the county's trunked system (analog mode). A contact of mine with SARA in Tucson says he hasn't heard of them using low band in several years... almost entirely on 155.220, or the County EFJ trunked system (and sometimes ham bands) these days. Those are the ones I can think of off the top of my head.

Low band is pretty much dead and gone in Arizona (though there are those few exceptions... and of course baby monitors... LOL). Head to the midwest and some of the East coast and man, low band is still busy.

Dan

There was a low band inter-agency frequency that all of the sheriff's offices used to have. The last I knew, only Pinal County and MSCO still had it. The Lake Patrol had it to cover some of the dead spots on Channel 8, like between Canyon and Apache Lakes. I'm not sure if they are still using it though.

Another low band frequency that can become active is 47.42 which is the Red Cross. The is a channel that is really only used when there is a Disaster. If you remember when the Salt River went over the banks and flooded Buckeye and such, it was utilized. The national people have their own radios that they bring with them.

Mark,

I got interested in your conversation with Dan about frequency counters, I had never thought about one before. I checked the site Dan quoted and started to look around at what else was available. As Dan said, any excuse is good enough for a new toy, and I haven't bought myself a new toy in quite a while.

After some research, I decided to get the Optoelectronics Scout frequency recorder. I just received it yesterday and today I went out to test it.
Went by the Target on Ina Rd. near where I live, put the thing in my pocket and walked around inside for a while. I got 5 hits on 151.625; so I plugged that in my scanner and sure enough, it was Target. Great!! Went over to K-Mart, I was in there for 15 minutes and got nothing. Don't know why, I'll try again later.

Then took a ride to the Oro Valley Target and did the same thing. In 10 minutes I got 14 hits all on 151.625, same as Ina Rd. Turned the scanner on in the car and confirmed it is the freq Target is using.

So my new toy is a lot of fun, and certainly less frustrating than sitting in a parking lot scanning thousands of channels trying to find the one you want. If you should get one, I don't suggest the db32 antenna they try to sell with it. At first I was getting no hits at all, then I put on the rubber duck that came with my scanner and thats when I got the Target freq. I tried my mobile antenna and got way to many freqs, mostly paging systems.

Let me know if you buy any toys.

John

We haven't had that channel on our consoles since we moved to the new
center and 800-MHz a few years ago. A lot of the Lake Patrol units
don't even have the low-band radio anymore.

Time goes on, frequencies go up, and nowadays Channel 8/Search is used
to cover some of the dead spots in the 800-MHz coverage.

I got a reply from Mr. Van Horn. He's wondering how long Customs has been using 165.4125 in Arizona? He doesn't have any info on that frequency being used by them here. He did some checking and said that the AUSC system was put up in the early 90's.

I see in the SWFD 6th Edition Update 165.4375 listed as the output of a Customs repeater on their channel 8. (166.300 in.) Were the two confused somehow, or does Customs use both?

John.

2522. How a Smart-Zone system works.

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-02 21:48:21 UTC
From: jhguetherman
Topic: 2522 Message: 2522

Found this on the socalscan group. Thought it might be of interest to folks here, particularly in regards to Maricopa County's Smart-Zone system.-John.

From: Jim Walls <k6ccc@e...>
Date: Fri Feb 1, 2002 9:58 pm
Subject: How a SmartZone system works

Paul Anderegg - indnewssrv@a... asked:
Ive never dealt with a Smart Zone system.....how does this work, or how will your average scanner listener be affected while trying to monitor????

OK, you asked for it. WARNING! This will get long, but I'll try to give a short answer first. Please understand that Motorola will happily teach you this for a large sum at a training facility in Schaumburg, Ill. in 2 weeks so I am condensing this A HUGE AMOUNT. It's another week for SmartNet Systems, another week for simulcast, etc.

> Most important question...IS IT DIGITAL?!?!?! :-D

A SmartZone system can be analog only (such as the Southern California Edison system I baby-sit), digital only (a lot of Navy systems, and I'm sure others), or mixed mode (such as the Orange County system). From what Steve Hronek of Glendale said yesterday ICIS will be mixed mode capable system. He did not indicate which (if any) operations will be digital, at least to start. Eventually I would expect that most (if not all) operation will be digital as narrowbanding continues.

As to monitoring a SmartZone system, if you can monitor a SmartNet system, you will be able to monitor a SmartZone system. That's the short answer. There is a longer answer later on.

Now, how does a SmartZone system work. I'm not covering basic trunking here. I'm assuming you already know that at least a bit. A SmartZone system is a group of SmartNet trunking systems tied together. That's the REALLY short (and not 100% correct answer). A single site trunking system (such as a SmartNet system) has a controller that controls the assignment of channels for each conversation. A SmartNet system may actually have multiple sites using voting receivers, simulcast transmitters, or both. In a SmartZone system, each SmartNet site (whether it's simulcast or not is irrelevant for this discussion) is tied to a Zone Controller that under normal circumstances takes over the channel assignment role. Each radio tells the Zone Controller what site and talkgroup it is

on. This is called affiliating. The Zone Controller uses that affiliation information to keep track of each radio that is turned on so that it knows what talkgroup it is on, and also what site it's on. When a radio wants to transmit on a talkgroup, that radio sends a data burst (called an Inbound Signaling Word or ISW) on the control channel of the site on which it is operating requesting a channel assignment. The Site Controller forwards that request via a serial data circuit to the Zone Controller. The Zone Controller then determines that the radio ID making the request is valid, the talkgroup is valid, the talkgroup is valid on the site that the radio is on, and (and this is the important part) what other radios are on that talkgroup, and what sites those radios are on. The Zone Controller then makes a channel assignment for each of the sites that have radios affiliated on that talkgroup, and sends that assignment information to each of the Site Controllers that are involved in this particular call. The Site Controllers then transmit a data burst as part of the data on the control channel (called an Outbound Signaling Word or OSW) to every radio indicating that talkgroup nnn has been assigned to channel xxx. All radios that are monitoring talkgroup nnn then switch to the assigned channel.

That whole paragraph just gets data moved around which gets the radios on the right channels, but we still need to route audio to the various sites. In a SmartNet system, received audio is retransmitted locally in each repeater. That's simple enough (and not a complete story, but close enough for this discussion). In a SmartZone system, the received audio from each channel is sent to a fancy audio switch that you may hear described as an Ambassador or an Embassy. There is a much longer answer to what's really the Ambassador and what's the Embassy, but for this discussion they are interchangeable, and I will use the abbreviation AMB to refer to the audio switch. The AMB is controlled via a serial data circuit from the Zone Controller. The AMB takes the received audio from the radio site that is currently receiving for a talkgroup and routes that audio to outbound audio circuits to whichever site or sites each particular call has affiliated radios on.

This might be easier to visualize this if I give an example. For this particular example, talkgroup 800101 has radios affiliated on sites 1, 4, 11, and 17 at this instant. A radio on site 4 wants to transmit on talkgroup 800101. For this example the Zone Controller assigns the following channel assignments for this call: Site 1 channel 5, Site 4 channel 3, Site 11 channel 8, and Site 17 channel 4. The radio currently transmitting is on site 4 so the AMB routes the received audio from Site 4 channel 3 to Site 1 channel 5, Site 4 channel 3, Site 11 channel 8, and Site 17 channel 4. Note that the repeated audio from site 4 is sent back to site 4. In other words, if there are two people operating on a given site, when one transmits, his audio goes through the AMB before it gets transmitted back to the other person on the same site. It is not repeated locally. There are two exceptions to this which I'll get to a bit later.

A couple of general points. Each trunking system has a system ID number. In a SmartZone system, there is only one system ID number for the system. Each site in a SmartZone system has a site number. If subscriber radios are programmed with a button to display it (ours at Edison are), pushing the button will display the site number, and pushing the button for more than about a second will force the radio to attempt to find a different site on the system. Subscriber radios will search to find the best receive signal in the event it is in an area that more than one repeater site covers. When a subscriber radio moves out of coverage of the site it's currently affiliated to, it will find another site and automatically switch to that new site and affiliate with the system (so the Zone Controller will know where to find it). A SmartNet subscriber radio will work fine on a SmartZone system except that it wont change radio sites automatically.

About failure modes and redundancy. I'll start at the smallest level. If a single repeater fails, that channel is turned down and will no longer have traffic assigned to it until is it deemed (by the self diagnostics) to be working again. There are some problems that are hard failures and wont restore until someone fixes it (such as a power amp failure, blown fuse, etc.) and there are some types of failures that are transitory in nature. When these types of failures clear, the channel will automatically return to service and the Zone Controller will resume assigning traffic to that channel. The only redundancy at the repeater failure level is that there are multiple repeaters and they are all shared so failure of one only reduces available channels and may increase number or duration of busy signals.

The next level of failure is a Site Controller. In the event of a failure of a Site Controller, that particular site will go into failsoft. In failsoft, each repeater operates conventionally (non-trunked) and each subscriber radio will switch to one of those channels - which one depends on how the radio was programmed. Unlike a SmartNet system, in as SmartZone system, subscriber radios will try to find a radio site that is operating in wide area trunking and will switch to a fully working site even if a site in failsoft has a stronger signal. There are two types of site controllers in use in a SmartNet or SmartZone system. The original type is commonly referred to as a 6809 controller and is quite old. A 6809 Site Controller can either be non redundant, or have a backup controller that is switched into service if the primary controller fails. In newer systems that use Quantar or Quantro repeaters, each repeater is capable of operating as the site controller. Under normal operation, one of the repeaters will operate as the site controller. The repeaters all communicate over a LAN with each other so if the repeater that is operating as the Site Controller fails, one of the other repeaters will take over that role. There is one other failure besides the site Controller that will put a site into failsoft. Each repeater site can have up to 4 channels available as control channels. In the event of failures of all available control channels, the site will go into failsoft mode. Failsoft is one of the two exceptions I mentioned

earlier where received audio is repeated locally.

The highest level of failure is failure of the Zone Controller. If the Zone Controller fails, each site will revert to a trunking on a stand alone bases where each Site Controller takes over channel assignments for that one site's trunking. This is called Site Trunking. Depending on how the subscriber radios are programmed, the user may not even know that the system is not in wide area trunking Users on any site will be able to communicate with each other on their trunked talkgroups just as they did before the Zone Controller failure. The exception is that they can only talk to other radios on the same site that they are operating on. Site Trunking is the second of the two exceptions I mentioned earlier where received audio is repeated locally. Normally all important cards in the Zone Controller are redundant and hot-swappable. I personally have walked up to Edison's Zone Controller and pulled the active CPU card out of the shelf and operation continued on the standby CPU without any interruption. I will point out that this was done during a scheduled maintenance outage, but it really does work. Besides the redundancies in the Zone Controller, a system can have a backup Zone Controller (frequently located somewhere other than where the primary Zone Controller is). If the primary Zone Controller fails, the backup Zone Controller can be switched into service.

The other top level failure is that of the AMB audio switch. Because all repeated audio routs through the AMB, failure of the AMB will also put the individual radio sites into Site Trunking (where the audio is repeated locally). The AMB can have a backup switch.

Consoles in a SmartZone system are connected via the AMB audio switch (short description). In the event of failure of the SmartZone or AMB, the consoles will not work. Dispatchers can use control stations to communicate on the talkgroups on the radio sites they have an RF path to. This works pretty well on a small system or with distributed dispatching, but on a wide area system with centralized dispatching it does not work so well.

A few things about control channels. Just like a SmartNet system, each radio site can have up to 4 control channels. In most SmartNet systems, the control channel rotates (normally daily). Generally in a SmartZone system the control channel stays the same unless the primary control channel fails. Yes, this means that the primary control channel may operate continuously for years. Part of the OSW datastream is a listing of the frequency for the (up to 3) alternate control channels at that site. The subscriber radios store that information in memory. Also part of the OSW datastream is the current control channel frequency at up to 7 adjacent radio sites. The subscriber radios also store that in memory. If the event that a subscriber radio stops receiving control channel data, it will first look at the 3 channels stored that are the alternate control channels at the current radio site (in case the site switched control

channels). If the radio can't find control channel on one of those three frequencies, it will try the 7 adjacent site control channels (in case the radio drove out of range of the previous site, or the previous site failed). If the subscriber radio still can't find a control channel, it will look at a list of up to 32 channels that are programmed into the radio to find a control channel. Normally every possible control channel at all sites in the system are programmed into that list. The last option is that if this feature is enabled on the radio, it will search every channel in the band looking for a control channel. Earlier in this paragraph I referred to up to 7 adjacent sites. The system has no way of "automatically" knowing what are the adjacent site, but that information is entered by us humans into the SmartZone Manager system.

A little about scanning in a SmartZone system - and I'm actually referring to the intended users of the system, but the information is relevant to people using TrunkTracker scanners. Remember earlier that I said that the Zone Controller will assign a channel for a conversation at the sites that have radios currently affiliated on that talkgroup. In the example I used many paragraphs ago, talkgroup 800101 had radios affiliated on sites 1, 4, 11 & 17. These are the only sites that the Zone Controller will assign a channel for a conversation on talkgroup 800101. I'll get to the exception in a minute. If a subscriber radio is affiliated on one of these 4 sites, and "scanning" talkgroup 800101 but affiliated on another talkgroup, that radio will hear the conversation. If however that radio is on another site, they will not hear the conversation on "scan". As a TrunkTracker user, you will hear traffic on a given talkgroup only if there is a radio affiliated with that particular talkgroup at that time. The exception I mentioned earlier is that a system administrator (like me) can tell the Zone Manager that any particular site (or sites) are required for any talkgroup. In other works, I could tell the system that it always must assign a channel for talkgroup 800101 on site 2. There are several reasons why this might want to be done. In our system, it is not normally done.

A few words about Private Calls. First of all, they are private only to users of the system. Scanner users and even people monitoring conventionally can hear them just fine. This is something that well constantly tell our users. Just because it's a "Private Call" does not mean that no one can monitor it. The guy that does most of our training for users, often demonstrates that in training classes using a TrunkTracker scanner. One thing to know about a Private Call however from a monitoring perspective. If the two radios in a private call are on different sites, you will only hear one side of the conversation. This is because the AMB only routes audio to the site of the person receiving. In other words, if one radio in the private call is on site 1 and the other is on site 2, when the radio on site 1 is talking, the audio is only routed to site 2. When the radio on site 2 is talking, the audio is only routed to site 1. Since you are monitoring only one site, you will only hear one side of the

conversation if the two radios are on different sites. If the two radios in the Private Call are on the same radio site, you will hear both sides of the conversation normally.

Lastly, a little bit about telephone interconnect. Subscriber radios that have interconnect enabled in the Zone Manager, can place phone calls from their radio. It is also possible for a phone caller to dial a certain number, enter a radio ID and the radio will be rang. Once a phone call is started, it stays on the same channel until is is terminated. This makes it very easy to monitor even on a conventional scanner. In theory, you will only hear the person on the phone. In reality however, it does not always work that way. The problem is with the phone on the far end, not the radio system. What actually happens is that audio transmitted by the radio, is routed via the telephone system to the phone on the far end, where it returns to the radio system. Sometimes you can hear both sides of the conversation almost equally well and sometimes you can't hear the person on the radio at all.

For those of you that really deal with SmartZone systems, you likely found a few minor technical errors in this discussion. This was generally intentional for brevity or to keep it reasonably simple. The Motorola manuals fill a small bookshelf, and I'm trying to repeat them in that level of detail here for obvious reasons.

If anyone has specific questions they would like to ask, I will attempt to answer them, I spend a large portion of my work day dealing with a very large SmartZone system (and have for the last 6 years), so I can likely come up with answers to your questions. You can direct your questions either to the SoCalScan list or directly to me at k6ccc@a...

2523. Scanner Store in Tucson?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-02 21:51:47 UTC
From: dvarapala
Topic: 2523 Message: 2523

Forgive me, I'm new to the area - where, aside from Radio Shack, can I buy a scanner at retail in Tucson? I know there's a Ham Radio Outlet in Phoenix, but surely there's a similar store in an area the size of metro Tucson?

Thanks!

There are no ham/scanner stores the size of HRO, that I know of, but you could try:

PACE Engineering on West Prince Road, or
Action Communications, on North Stone Avenue.

Both at one time sold Uniden scanners. May want to call before driving down to see what they have in stock.

Thanks, Brian. Wasn't sure if they used one of the 4 channels for Wickenburg PD and FD or not. And I'm kinda right in between Wickenburg and Apache Junction, and AJ also uses a 155.625 repeater, with 127.3 PL. And then there's the bleed-over from Phoenix PD 600 on 155.640, PL 151.4. It doesn't help that my scanners don't have PL capability. Only my ham dual-bander does.

From: walter.howard@juno.com
Topic: 2513 Message: 2527

The Agriculture Dept. (and they were actually for Horticulture [plants])
were taken out of service over 3 years ago (some by me.)

The MVD channel was JUST taken out of service and a new Hi-band system
and console was put in over the last 6 months.

I'll have to double check, but I don't know of any State Land low-band
either.

DPS listens to NO low-band channels and only VHF State and a few ADOT
(outside Phoenix) for hi-band.

Sometimes I wish we WOULD use low-band in some of the more remote areas.
The coverage is phenomenal.

Dan, any idea how many of the ArizonaScannergroup lives in or around the Tucson Metro area?
If there were more than, say, 2, it might be fun to have a local get to gether.

I tried looking at the http://groups.yahoo.com/group/ArizonaScanner/ homepage and did not see
any thing that would break down the 327 members.

Mark in Oro Valley.

Hey Mark,

Yeah, that sounds like a great idea. I'd even try and come down for it.
I make my way to Tucson a couple times a month these days anyway. ArizonaScanner
currently has 326 members, and there's no doubt in my mind that at a minimum
10% of those are in and around Tucson.

I certainly have no problem with you or anyone else organizing something
and publicizing it on this list. That goes for other parts of the state
as well.

Meeting at Fudruckers in Phoenix work well for several reasons:
1. Order food at the counter. No need to deal with checks or servers.
2. Seat yourself, and those who arrive first can pull several tables together,
and add tables to the end as needed.
3. Easily come and go, late arrivals, etc.

I know there is a Fudruckers on East Speedway, I believe. Obviously any
restaurant of a similar style should work well, too.

Just a warning... hobby-type meetings generally work out best if you pcik
a certain day of the month (i.e. "last Saturday of the month") and keep
it there, every month. It will start out slow, but if someone publicizes
it here regularly, and perhaps with the local ham radio clubs (letting them
know it will largely focus on scanners, not just ham) it will pick up.

So go for it! I really enjoy the meetings when I can get there, and I know
others do as well.

Dan

Today, sunday during work breaks I was monitoring 154.935, the dps state freq. It was very active. Heard many pinal co. so's using this freq in relationship to some biker group on highway 79. I also heard pcso and dps comms which seem to relate to a radar trap or checkpoint on highway 79 near florence junction. I was not able to monitor enough to get what all was happening. I rarely hear traffic on this freq. Anyone else tune in?

I did a search on that frequency on the FCC website. No matching criteria. Basically, there is no record of anyone on that channel in the whole country. (At least not in the Public Safety Pool (PW) results. And only one other licensee nationwide otherwise.) Did you happen to catch any locations? Who/What/Where the VINS were coming back to? Accents?

Also did a search on 44.760, the State Land Department's lowband repeater output. It's still an active license, with several transmitter locations, co-located with the 151.400 and 151.415 repeater sites. (And a couple of others, I believe, I just lost all the stuff I had copied-and-pasted here due to a stupid mistake on my part. I'm pissed right now.) All expire September 12, 2004.

Did a search on 159.450 as well, as it only showed up once when I was going through all the stuff from 44.760, and found the licenses for all the State Parks who seem to be the main users of the Tac channels, and the Operations Simplex channels listed in the SWFD.

You can plug in any frequency for Arizona in here, and check the results yourself:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/freq_st.hts

44.760:
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/freq_st_res.hts?db_id=19&rows=0&state=AZ&freq=00000044.76000000

159.450:
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/freq_st_res.hts?db_id=19&rows=0&state=AZ&freq=00000159.45000000

2540. RE: [ArizonaScanner] DPS coms

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-04 18:07:03 UTC
From: Dan Rollman
Topic: 2535 Message: 2540

Hi Scott,

Yeah, I listened to it. They had it simulcasting with CI-3 (460.275). DPS units were on CI (since they have UHF radios) and Pinal SO units were on DPS State VHF (since they are VHF). Sounded like a pretty good joint operation.

Dan

2541. LOW BAND FREQ LIST!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-04 19:53:37 UTC
From: k1fhz
Topic: 2541 Message: 2541

Hey folks I took N7DJR's Low Band list and made a MS Word file out of it and it is posted as an attachment here. It's 20 pages long but you can mess with it and change the font size or what ever. It has a wide left margin so you can punch it and put it in a folder if you wish.

I have noticed as I get older the printing industry keeps changing the actual font sizes to save poaper I think!!! (:-)

When I was about 20 years old what they now call 12 point was actually about an 8 point font!!!! Seems other older folks say the same thing. These young kids can't tell the difference because thay are not old enough to remember when 2 point type was readable I guess!!

Listening to the low band skip signals is a kick some times. Some of the very small sheriff offices down in the south where they have 3 or 4 officers in the dept can just be casual and very amusing at times.

Dan,
I just found out I don't know how to send an attachment when I originate a message!!! I
made a word file from the low band freq list posted. I wanted to share it with all.

I had already sent the email less the attachment thinking I could piggy back it on to an email.
Help!
August

2544. RE: [ArizonaScanner] Hey Dan, Help!!

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-04 22:12:38 UTC
From: Dan Rollman
Topic: 2542 Message: 2544

Hi August,

At the request of many members, the ArizonaScanner email list is configured to not pass email attachments (prevents relay of viruses, etc.). Instead, all members are able to upload to the files area of our list's community at groups.yahoo.com and those who want the file can download it from there. All are welcome to upload relevant, legal files to the files area, and then post a message to the list letting everyone know what is available for download.

I guess we can't send attachments on this list!!!???

If anyone is interested please send me a direct email I'll forward the attachment.

2546. RE: [ArizonaScanner] Re: Arizona Lowband Activity?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-04 22:18:38 UTC
From: Dan Rollman
Topic: 2513 Message: 2546

Just FYI,

This bandplan is a few years old, si keep in mind that the government and public safety type frequencies were combined into one "public safety pool", and many industrial and business services were combined into a single business pool. So, for example, all of the frequencies listed below as Fire, Police, Special Emergency, Highway Maintenance, Forestry Conservation, etc. are now in one big pool and available (with a few exceptions) to any of those services (and others). Likewise, Special Industry, Petrolium, Motor Carrier, etc. are available to eachother and other types of services as well. Also, the Spectrum Management office no longer differentiates between US Army, Navy, etc. As I understand it, they've done the same thing there and pooled everything together.

The same is true of hi-band and UHF as well.

The list is still useful for suggested users, as those who licensed a frequency prior to the merger of the service pools would have followed the bandplan below, but unfortunately these bandplans are no longer hard and fast rules.

Dan,

I'm relatively new & not too sophisticated in scanning, but enjoy more & more listening to the local happenings in the Gilbert/Mesa area.

Haven't been to a meeting at Fuddruckers yet in Phx., but plan to.

Could you briefly indicate what takes place at the monthly mtgs in Phx. & which Sat. they occur? Also, is a notice emailed to the list, or is the mtg. time always the same?

Thanks, GB.

Hi GB,

You can go to http://www.incidentcommandpage.com/index2.html and click on "Meetings" for brief info and a map. They are held the last Saturday of each month from 6:30 to 8:00 PM.

A reminder is emailed to the list when one of us regulars remembers. :) Roy, the director of ICP (the scanner club) has promised to be diligent in sending reminders to this list when I forget.

They are very informal. No set agenda or anything like that. We just push together a bunch of tables and gather around to chat about scanners. Some are relative "experts" in local scanning, others are people who just bought their first scanner. Come to share information, ask others questions or for tips, or both! Think of it basically as a bunch of hobbyists eating cheeseburgers and chatting across the table about scanners and public safety operations. :-)

Volunteers In Police Service Information

http://www.citizencorps.gov/vips.html

The program will provide resources to assist local law enforcement in incorporating community volunteers into the activities of the law enforcement agency. These resources will outline a series of best practices to help state and local law enforcement design strategies to recruit, train, and utilize citizen volunteers in their departments.

How about the 44.760-45.040 State Land channel, Walter? KNFA795 is at 1624 W. Adams, Phoenix. Expires Sept. 12, 2004. Also includes 151.400 and 141.415 base stations, in addition to the lowband base. The KXO948 Towers Mtn. site has a repeater and base listed for all 3 channels. Expires Sept. 8, 2004. Granted, just because the license is still valid, doesn't mean there's any actual radio equipment installed. But I was under the impression that if there wasn't, the license had to be modified to reflect that. Not trying to be argumentative, just curious if it's still used, or useable as a backup.

ARIZONA, STATE OF KNFA793 Active AZ FLAGSTAFF COCONINO PW Base 160
ARIZONA, STATE OF KNFA794 Active AZ PRESCOTT YAVAPAI PW Base 160

ARIZONA, STATE OF WNAM440 Active AZ BISBEE COCHISE PW Base 200
ARIZONA, STATE OF WNAM440 Active AZ BISBEE COCHISE PW Mobile Relay 200

I'm also curious as to how the "Operations Simplex" channels are channelized in the radios? 151.175, 159.285, 159.345, according to the SWFD. They seem to be used in the various State Parks. Usually

along with a base on 151.400 simplex, it appears from the license data. Does it differ at each Park? Does anybody have a radio with every frequency/channel programmed into it? (I'm asking because I like to program my scanners as close as possible to how the agency I'm listening to does. Makes it much easier to follow them as they change channels.)

Just did a search on 151.175. Came back to KF3981, Game and Fish. Seems that State Land, and Game and Fish, may be sharing radio channels.
151.460-151.145 (G&F Statewide repeater/talkaround);
151.160 (G&F mobile);
151.175 (Land simplex);
151.190 (G&F mobile);
151.220 (G&F mobile);
151.235 (G&F mobile);
151.340 (?-No SWFD listing);
151.385 (G&F Dist. 1 output/talkaround);
151.400-159.375 (Land Ch. 1 & 4 repeater/talkaround);
151.430-159.270 (G&F Dist. 6 repeater/talkaround);
151.445-159.315 (G&F Dist. 2 & 5 repeater/talkaround);
151.475 (G&F Dist. 4 output/talkaround);
151.490 (G&F Dist. 3 output/talkaround);
159.435 (Land Ch. 2 (& 3?) input.

Checking State Land Tac 2, 159.450, came back with (WNGA952 from Phoenix)
159.240 (Land Tac 3)
159.255 (G&F Dist. 3 repeater input)
159.285 (Land "Operations Simplex")
159.330 (Land Tac 1)
159.345 (Land "Operations Simplex")
159.450 (Land Tac 2)

So, it would seem that at least some of the channels may be shared between the two agencies, or they may have some form of mutual-aid agreement.

I figure that if we can get it all straightened out, it'd be of use to folks while vacationing around the state this year. Maybe give them an incentive to visit the State Parks, instead of or in addition to the National Parks and Forests.

> Target at 91st Ave. and Northern does use radios, but couldn't find them when I was there earlier today. The antenna suggested UHF, and I was just scanning through the band, not using Don's list. Didn't see or hear any radio's at K-Mart at 91st and Peoria shortly after I checked Target. (Actually made a purchase at both stores, in case you were wondering if I just went in to search for their radio channels.)
>
> John H. Guetherman
> Peoria, AZ.

I need to confirm, but I figured out the Target store number from my receipt, and found 4 frequencies from the FCC's lookup: 461.0375, 462.9125, 466.2875, and 469.4875.

Can't find a K-Mart licensed in Arizona.

Only two Arby's resturants in Arizona that are licensed. One in Phoenix at 805 E. Bell Rd., but with 18 frequencies.....

Go to the files on this site and try those frequencies for the SP-10 now keep in mind some stores will just take FSR radio's off the shelf and use them, other's will have Business band radio's but no FCC Call like trailer park's, appartment complex's Wal-Mart,and the rest. I can almost bet you will find them on one of those freq's I posted in the file.

From: Dan Rollman
Topic: 2554 Message: 2559

Southwest Frequency Directory (www.scannerstuff.com) lists for Prescott Valley PD 155.895 as a repeater, 155.865 as a simplex. Also, a 2nd repeater on 155.130 (158.730 input). The Building Department is on 154.710, and "Public Works Department" (not Street Maintenance... will be corrected in SWFD-7) is on 155.025. PVPD undoubtedly has all these frequencies in their radios.

2560. Phoenix City Trunked System

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-06 22:19:55 UTC
From: Dan Rollman
Topic: 2560 Message: 2560

An update on the new Phoenix Trunked System implementation project from the committee steering it all:

Timeline remains: Phoenix Police to go online February 2004, Fire to join 4-6 months after that.

Physical site construction has begun. All infrastructure equipment has been shipped to a warehouse in Phoenix, and installation should begin in a few months.

Handheld and Mobile radios have not yet been acquired, and this should take place in late 2002 or early 2003.

They are modifying the plans to bring Chandler into the system (original plan did not include Chandler), so that FD can remain with PFD. Buckeye and Buckeye Valley FD's are NOT scheduled to be included in the 800 system. They can be brought on later if they themselves can pay to expand the system to adequately cover their area. Otherwise, they will remain VHF.

During transition to the trunked system, existing VHF channels will be "mapped" to trunked talkgroups, and simulcasting will take place. After the transition is complete, most Phoenix VHF frequencies will be released to other agencies.

The Fire Department expects to have several conventional channels for "safety" use on firegrounds, but at this point they anticipate using trunked talkgroups for basic fireground communications.

Check out this system, it has many different user's and some of these freq's are licensed to none other than Nextel there are no digital signals as of yet all anolog and I have verified all these frequencies belong in this system. I used S-4 in all blocks it works good.

Oh yes it will be entirely digital. Don't know of any major new Motorola systems planned in the U.S. that are NOT digital. That should be a given these days. Luckily, even on a Uniden-like timeline, the base and handheld digital scanners should not only be out but possibly have several more models by the time this Phoenix system gets up.

2566. Re: [ArizonaScanner] Re: State Land/Arizona Lowband Activity?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-07 23:14:15 UTC
From: walter.howard@juno.com
Topic: 2513 Message: 2566

The question was about 44.66 (MVD) which has gone HiBand.

I made no reference to State Land.
In regards to them, the only stuff "I" know about is also HiBand.
AND, we don't do their mobiles.

Be careful of the difference between the State Land - Forest Fire
Division and State Parks.

See my notes below

Walter Howard
TeleComm Supervisor
Arizona Dept. of Public Safety
"Courteous Vigilance"
All opinions expressed are personal, NOT THE DEPARTMENT'S!

I have no information on ANY of State Parks radios other than the
shared stuff with Forest Fire Division

> Just did a search on 151.175. Came back to KF3981, Game and Fish.
> Seems that State Land, and Game and Fish, may be sharing radio
> channels.
> 151.460-151.145 (G&F Statewide repeater/talkaround);

You've got them backwards 151.145 is the mobile tx to the mountaintop.
151.46 is the rx and talk-around.

> 151.160 (G&F mobile);
> 151.175 (Land simplex);
> 151.190 (G&F mobile);
> 151.220 (G&F mobile);
> 151.235 (G&F mobile);

No information on these

> 151.340 (?-No SWFD listing);
This is a G&F simplex channel available for car-car traffic.
Not many people use it. Mostly they talk car-car on the direct side of
G&F Sate.

> 151.385 (G&F Dist. 1 output/talkaround);
> 151.400-159.375 (Land Ch. 1 & 4 repeater/talkaround);

151.40 is paired with 159.405

> 151.430-159.270 (G&F Dist. 6 repeater/talkaround);
> 151.445-159.315 (G&F Dist. 2 & 5 repeater/talkaround);

The "shared" channels aren't in any information I have ready access to.
I can tell you that I've never programmed 151.175 in any G&F mobiles or
portables.

Also, in G&F speak, they are "Regions" not "Districts"

2567. A 3810 Coax Cable Source

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-07 23:23:33 UTC
From: k1fhz
Topic: 2567 Message: 2567

Just for general info.
If you want to purchase small quanties of JSC 3810 low loss coaxial cable the RF Connection <http://www.therfc.com> has it in any length. Their price is 50 per foot up to 99 feet and then drops to 45 cents per foot at 100 feet. There are additional discounts above 1000 feet.

If you and your friends can make a 500 foot roll go away you can buy it direct from JSC for 38 cents a foot. This cable has equal or slightly better loss figures than LMR-400 or Belden 9913F7 which both cost a good bit more. <http://www.jscwire.com>

2568. [ArizonaScanner] Motorola Radius SP-50 Frequency

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-07 23:38:54 UTC
From: porscheEMB@aol.com
Topic: 2568 Message: 2568

Hello all,

I have a question on the motorola Radius SP50 Frequency. I am wondering the one with the thick antenna. Is that the UHF or VHF Model, and what are the frequencys that come with them?

Thanks

2569. Re: [ArizonaScanner] Motorola Radius SP-50 Frequency

Topic: 2568 Message: 2569

Go to www.batlabs.com and look up the radios model number for more information.

Kevin

2570. Re: Motorola Radius SP-50 Frequency

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-08 01:34:16 UTC
From: n7djr
Topic: 2568 Message: 2570

I have up loaded two files recently that are directly related to the type of radio you are referring to. I have posted the frequencies as well as some programming instructions for the older dipswitch models and the frequencies of some of the newer radio's out there today. The antenna's can be misleading our UHF and VHF radio's both have the same type of antenna's on them so be sure and check both bands for those radio's with the longer antenna's
Good Luck, Dave

Yes, I changed the subject from MVD to State Land, by asking about
the Lowband channel. Sorry for the confusion.

> In regards to them, the only stuff "I" know about is also HiBand.
> AND, we don't do their mobiles.
>
> Be careful of the difference between the State Land - Forest Fire
> Division and State Parks.

Ahh, okay. Perhaps in the next edition of the SWFD, that difference
can be noted? And the channels/frequencies can be differentiated
between the two? It appears that the "Operations Simplex" channels
are used by State Parks, along with 151.400 simplex, according to the
license data I was looking at.

Correct. I typed it as the repeater out/talkaround-repeater input pair. 151.460 being the output and talkaround, 151.145 being the input. Whenever I show the pair, I do the output first, then the input.

>
> > 151.400-159.375 (Land Ch. 1 & 4 repeater/talkaround);
>
> 151.40 is paired with 159.405

Most likely a typo on my part. Sorry.

>
> > 151.430-159.270 (G&F Dist. 6 repeater/talkaround);
> > 151.445-159.315 (G&F Dist. 2 & 5 repeater/talkaround);

> > 159.435 (Land Ch. 2 (& 3?) input.
> Paired with 151.415

The license data didn't show 151.415, which is why I didn't put it in there. It only shows 159.435. The license data also didn't show the inputs to 151.475 and 151.490 in that batch, which is why I didn't put them in that list. I was (trying to) only show what was actually in the ULS records.

The SWFD 6 says Districts on page 26. That's why I wrote it. Thanks
for the correction.

2572. FCC License Audit Update

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-08 03:16:25 UTC
From: jhguetherman
Topic: 2572 Message: 2572

From: worksntv@a...
Date: Thu Feb 7, 2002 3:08 pm
Subject: FROM: DISPATCH Monthly Magazine News Hound

Yikes! The FCC is posting weekly the frequency licensees (below 800 MHz) who have not returned the agency's audit request for information within the required 60 days--for public safety there are 36,585 outstanding callsigns! Don't feel bad...the overall response rate is just 52%. Texas--you're tops on the list with 2,070 unreturned forms. But on the bright side, each non-response may generate an authorization cancellation...new spectrum! Check to see if your response was received, why you haven't received a letter, or download the entire current list at:

http://wireless.fcc.gov/plmrs/audit.html
~~~~~~

You can download a .zip file. I don't have anyway to unzip it without spending $30 to buy Netzip, so I can't see if any Arizona agencies are in the list.

You can however go to http://svartifoss2.fcc.gov/cgi-bin/audit.cgi and do a spectrum audit search. A couple of parameters are available to search by.

The city of Phoenix was sent a letter on 9 January. There has been no response as of yet.

http://svartifoss2.fcc.gov/cgibin/audit.cgi?
action=refsearch&refnum=269333

For some reason, KNGE453, Peoria police, had a letter sent to the city of Phoenix. No response.

http://svartifoss2.fcc.gov/cgibin/audit.cgi?
callsign=KNGE453&action=callsearch

But another search shows a response for WPLP537, the Waddell Dam 453.650 ch. 1 repeater site, and WYR583, the 460.600 ch. 3 repeater. Their main license audit letter for KNGE453, is either floating around somewhere in Phoenix, or was trashed.

http://svartifoss2.fcc.gov/cgi-bin/audit.cgi?
action=refsearch&refnum=182257

I think I really need to get ahold of the Lt., or the other officer who's also a Ham, that I know.
~~~~~~

John H. Guetherman
Peoria, AZ.

2574. MCSO Ride-along program?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-08 04:17:56 UTC
From: jhguetherman
Topic: 2574 Message: 2574

I'd like to know if MCSO has a ride-along program. If they do, where do I go to get an application? District substation, or elsewhere? I'd like to ride in District 3, preferably in the 340's. 342 and 343 appear to be the closest to my home, and are most likely the one's I see once in awhile driving along Peoria, Olive, Grand and/or 91st Ave's. One of them at least, has an SUV. Saw it today. (Are there any statistic's available as to which beat is the busiest in District 3? Or the other district's?)

Not sure exactly when I'd like to do this. But sometime in the next few months.

A question about the beat numbering. District 3 has the 340's and 350's. Why not 300's and 310's, or 310's and 320's? The other district's are similar, they skipped over some numbers.

John H. Guetherman
Peoria, AZ.

2575. Re: [ArizonaScanner] MCSO Ride-along program?

Yahoo group: ArizonaScanner (1999 — 2002)

From: mmi-comm@juno.com
Topic: 2574 Message: 2575

Yes, MCSO does ride-alongs. I have gone on 3 w/them. To schedule a ride-along, look up the number in the phone book for the substations (or whatever they're called). If you call the one at Southeast (on Lewis) you want to make sure you talk to JB. Tell her that you're interested in going on a ridealong and she'll ask you for all the required info. At the date she specifies you go over to that substation, sit in the briefing room until one of the deputies claim you as his CO (civilian observer). Even tho it is EXTREMELY easy to get a ride with MCSO, I don't really recommend it.....out of the 3 rides that I went on, only 2 had anything interesting happen and only one had an easy-to-talk-with deputy. I suggest going with DPS, I find the officers of the highway patrol to be much more down to earth and the accidents can be fascinating. Don't get me wrong, there are a lot of nice deputies, but it never seems to work out for the best. If you still feel like going with MCSO I suggest that you ask to ride with Deputy Hannah (no guarantee that you can), he was the second one I rode with and very nice. BTW, for highway patrol, you have to go to one of their substations, fill out an app, and wait like a month for any results. You should call DPS back after a few weeks if you haven't heard from them just to make sure that they're actually doing anything with your app...but be nice :). One more thing, I have also been out with Chandler, I don't know about all the officers but the one I was with was really good. I suggest you check them out too.

Note: I don't mean to offend anyone with my favoritism and I am sorry if I do.

From: Mark Pagel
Topic: 2576 Message: 2576

Calling all Tucson metro area members...

How about a get-together this month?

Lets start off with the following date/time/place:
Tucson Arizona Scanner Group Get-together
February 16, 2002
Fudruckers, 6118 East Speedway Blvd.
0500PM local time.

We can then debate over burgers if another time/place/date is better.

Mark Pagel
Oro Valley, AZ

> I'd like to know if MCSO has a ride-along program.

Civilians are sometimes allowed to ride along with patrol units,
but the final decision is left to the district patrol sergeant for the
shift on which you ride.

> If they do, where do I go to get an application? District substation,
or elsewhere?

The district in which you want to ride. Yours would be Dysart/Bell.

> I'd
> like to ride in District 3, preferably in the 340's. 342 and 343
> appear to be the closest to my home, and are most likely the one's I
> see once in awhile driving along Peoria, Olive, Grand and/or 91st
> Ave's.

341 is North side of Sun City
342 is Central Sun City
343 is Youngtown area

341-343 respond a lot to each others areas

344 is Sun City West
345 is White Tanks area
346 is Wittman
351 is Morristown
352 is Wickenberg
353 is Aguila

> One of them at least, has an SUV. Saw it today.

Probably the patrol sergeant. But there are other 4x4's in use as well,
not always guaranteed who gets them.

> Are there any statistic's available as to which beat
> is the busiest in District 3?
> Or the other district's?)

Research and Planning, I'm sure, has this info, but does not publish it
that I know of. Personal opinion: Swingshift 346 is usually an active
car, but it's out of the Peoria area.

> Not sure exactly when I'd like to do this. But sometime in the next
> few months.

During the daytime, call the District where you want to ride a week
ahead of time or so, and you can figure out which squad/shift appeals to

you. They'll get you in contact with the sergeant for that squad.

The shifts and squads change daily, sometimes 8 hour, and sometimes 12 hour, and sometimes covered by the relief squad (once a week).

> A question about the beat numbering. District 3 has the 340's and
> 350's. Why not 300's and 310's, or 310's and 320's? The other
> district's are similar, they skipped over some numbers.

341 = District Three, Squad 4, beat 1
beat 0 is the squad sergeant.
beat 9 is reserved for callback officers (somebody on light duty working out of the district)

Squad 4 is the south side of the district, squad 5 is the north, and at the present time, there's not enough officers/beats on either squad to have 2 sergeants, so 340 covers both squads.

Squad 8 is admin.
Squad 9 roams.

The 300 series is command staff, the 310 series is the detective squad. So beats start at 21 -- but 221 is a beat on the same channel in district 2 and there was a lot of confusion between 221 and 321. Same with 231 and 331 ... so many years ago, they shifted district 3 20 and 30 squads to 40 and 50.

Same way on the eastside ... 20 squad is in district 1, 30 and 40 squads in district 4. Actually it gets more complicated in 4, because there's now 4 north and 4 south ...

4 north has command staff 400, detective squad 410, beats 431-436 (sgt 430), and admin squad 47x.

4 south, then, has command staff 400, detective squad 420, beats 441-444 (sgt 440), and admin squad 48x.

Some shifts have a 430 who handles both north and south squads, and other shifts have a 440 who handles both north and south squads. It's rare to have a 430 and a 440 on the same shift.

In all districts, the 90 squad roams anywhere, which is why the posse jail wagons are always Kx9x (King for posse unit).

Here's the whole scheme. There will be a letter in front to designate shift and number of persons in the unit.

10x Dist 1 command staff
11x Dist 1 Detectives
12x Dist 1 Patrol
18x Dist 1 Admin/Community Liaison
19x Dist 1 roam

20x Dist 2 command staff
21x Dist 2 Detectives
22x Dist 2 Patrol North
23x Dist 2 Patrol South
28x Dist 2 Admin
29x Dist 2 Roam

30x Dist 3 Command staff
31x Dist 3 Detectives
34x Dist 3 Patrol South
35x Dist 3 Patrol North
38x Dist 3 Admin
39x Dist 3 Roam

40x Dist 4 Command Staff
41x Dist 4 North - Detectives
42x Dist 4 South - Detectives
43x Dist 4 North Patrol
44x Dist 4 South Patrol
47x Dist 4 North Admin/Community
48x Dist 4 South Admin
49x Dist 4 Roam (491-494 North, 495 PV, 496-499 Ftn Hills)

50x Lake Patrol Command and Detectives
51x Lake Patrol - Apache Trail Squad
52x Lake Patrol - Salt River Squad
53x Lake Patrol - Bartlett Lake Squad
54x Lake Patrol - Lake Pleasant Squad
55x Lake Patrol - Mounted Squad
56x Lake Patrol - Reserves
59x Lake Patrol - Roam

Motors have just switched to the
62xD and 63xD squads (used to be
62xZ and 63xZ squads)

2578. Re: MCSO Ride-along program?

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-09 02:37:21 UTC
From: jhguetherman
Topic: 2574 Message: 2578

Thanks for the info Dan. I'd be willing to ride with any of the 340 beats, or even the 9 squad and just roam District 3. It doesn't have to be the closest two to home.

In District 2, 225 is closest to home, but any of the 220's would work.

Although, riding with one of the "outlying area" deputies might prove interesting.

How are the Canine units designated?

Does Lake Patrol have ride-alongs as well? Particularly 540.

How do the Park Police break down their designators? You may have mentioned it before when I brought them up in a past message. I'll have to back track and see if you did. I do recall you mentioning that they operate mostly on the Eastside S.O. talkgroups now, instead of their own. Do they have ride-alongs?

I've ridden with Peoria PD 3 times, but that was back in 87 or 88 or so. I was also lucky enough to get a ride-along with Peoria's EP and LT 193, and BC 191 one day a couple of years ago. Glendale PD and DPS West Valley are two others I'd be interested in riding with one of these days.

Yep, you did. Post 1696.

"Here's some Park Police callsigns you might come across: the prefix
P used to be pronounced "Parks" on MCSO channels when we only did
dispatch on nights and weekends, but now that they are dispatched
full time by MCSO, the prefix is pronounced "Paul". The conflict
between this and posse callsigns (also Paul) is usually obvious,
since we don't have Posse callsigns less than 1000.

P600 - Park Police Chief
P605 - Park Police Lieutenant
P606 - Park Police Lieutenant
P610 - Park Police Sgt - West
P611 Estrella Park
P612 White Tanks Park
P613 White Tanks Park
P620 - Park Police Sgt - North
P621-P626 - Lake Pleasant
P630 - Park Police Sgt - (not currently in use)
P631 Usery Park
P632-P623 McDowell Mtn Park
P646 - San Tan Park Manager

The park police also (recently started to) use OPnnn (pronounced
Ocean Paul) followed by their serial number when they are working off-
duty jobs."

You also said they're on the Lakes talkgroup, which is handled by
the Eastside dispatcher. If they have ride-alongs, White Tanks and
Lake Pleasant would be my preferences.

State Lands (or maybe Game & Fish?) had low-band probably the same time the Highway Patrol did. It was in the 45 mhz range. Some of that gear was surplussed to the Sedona Fire District. They went to VHF and some of the remaining low-band gear was surplussed to the Red Cross, about 1993 or so.

Calling all Tucson metro area members...

How about a get-together this month?

Lets start off with the following date/time/place:
Tucson Arizona Scanner Group Get-together
February 16, 2002
Fudruckers, 6118 East Speedway Blvd.
0500PM local time.

We can then debate over burgers if another time/place/date is better.

2584. PFD - 1st Alarm Alert 2

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-13 03:18:49 UTC
From: Justin Crawford
Topic: 2584 Message: 2584

Anyone listening to this?
Does anyone know the frequencies that the Fire crews use to talk to the Tower/Aircraft?
Would I even be able to pick it up if I was not in the vicinity of the airport?

Apparently they have an aircraft coming in in about 10 min that is experiencing a full hydraulics failure.
This was dispatched as and Alert 2 and has just been upgraded to a 1st Alarm Alert 2.
Units Responding to the Alert 2
Foam 1
Foam 2
Foam 3
Battalion 19
Engine 19
Engine 16
Ladder 16

Units Responding on the 1st Alarm:
Squad 19
Rescue 16
Engine 29
Battlion 5
South Deputy Cheif
Command Van 1
Utility 1
Ladder 1
North Deputy Cheif

According to Channel 12 this is an Air National Guard KC-135 with a full hydraulics system failure.
It's been flying around for the past 2 hours trying to burn off fuel.
Does anyone have any frequencies that they might be using?

I don't know if it is related (I haven't been listening all that long)
but it sounds like there is related traffic on 154.2500 (Phoenix Fire
Channel 2)

Phoenix Fire usually stages their units at the Airport for Alerts on Ch2
154.250. Sky Harbor and Phoenix Fire will also communicate on the Sky
Harbor trunked system (don't have the talkgroups). Sky Harbor tower also
will communicate with aircraft on 118.000, 120.900, 126.600, and others.

2589. Haz Mat-Peoria

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-13 20:41:28 UTC
From: jhguetherman
Topic: 2589 Message: 2589

Somewhere up on 87th Ave. Chemical leak, water department involved.
Evacuation, unknown how large. Been going on since just before noon.

Does anybody know the details?

I didn't catch it on the scanner untill at least 12:30. Haven't
caught any news blurbs about it either. Sounds like it's about to
wind down.

Some units included E195, Sation 157 and 41 Haz-Mat, BC 191, Car
957, possibly E's 131, 155 and/or 156.

It was a 1st Alarm Hazardous assignment @ 87th Avenue & Beardsley Road. Per my pager, it was a leaking chlorine tank at a construction site. That's all the info I have, didn't receive any updates on the incident so I assume the leak was contained.

It was a 1st Alarm Hazardous assignment @ 87th Avenue & Beardsley
Road. Per my pager, it was a leaking chlorine tank at a construction
site. That's all the info I have, didn't receive any updates on the
incident so I assume the leak was contained.

With so many companies going to 450 trunking, I was wondering if any of the trunking scanners will track them?

Anyone know what is going on with the school that is in lockdown? I just turned the scanner on a few minutes ago and heard two officers talking about where to send the parents to wait for information.

I didn't listen to it myself, but the ICP Pager says it was an 8 year old kid that was playing with a BB gun nearby. Someone thought he was pointing it in the direction of the school. Breaking down the perimeter.

My guess is someone is gonna be grounded for a long time.

Hi Mark,

ICP has a website at www.incidentcommandpage.com with more information.

Basically it is a service provided by what amounts to a "scanner club". Approved scanner hobbyists have the ability to page breaking news information out over the system to members as it is unfolding. I am a member and volunteer dispatcher for them.

I know of the Pro-92 (Radio Shack) that will track an LTR and the Bearcats track the 400Mhz Motorola. As far as I know there are no Motorola 400Mhz systems in the valley other than the Luke Airforce Base Digital one? I too have been monitoring and working with other systems than Public safety to keep busy while waiting for a digital scanner to come out so I can monitor what I want to.

Folks,

I have an older PRO-43. Most of the keys no longer respond, only a couple do.
Is there some money saving tip that anyone as found to bring the key pad back to life?
I took the thing apart and it does not look like cleaning the contacts is feasible on this model.
I suppose Radio Shack will laugh if I ask if they can still service it.

Any ideas???

Mark

You can probably still order a replacement keypad from Radio Shack. I have ordered parts for older scanners from them and surprisingly they actually had them in stock. Sometimes the rubber on the back of the buttons wears down and doesn't make contact like it should or the rubber keys become deformed and stick after a lot of years of use.

Call Radio Junk at "800 the-shack" and see if they still stock
the part. It would help if you go out to <http://www.radioshack.com>
and go to manuals, print out the manual and then use the exact part #.
This will be less confusing to the order taker.

Sounds like the Tucson Fudruckers Get Together was a good time for all.

I just thought I would drop a note here about the upcomming ICP Get Together in Phoenix this next Saturday the 23rd of Feb at the Fudruckers on Highland just East of the A51. We meet at 6:00pm and usualy go until 8:30-9:00 (sometimes later out in the parking lot or over on Air Lane by the Airport). Everyone is welcome and you do not have to belong to ICP to attend. We are there for the enjoyment of chatting about scanners and related topics and we generally have a great time. ICP is just the sponser of the get together and several ICP members are usually there as well.

Come on out and say hi!!

2611. 123.550

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-17 09:39:17 UTC
From: jhguetherman
Topic: 2611 Message: 2611

There's a thread on socalscan about the proper use of 123.450, which is a flight test frequency. It is frequently used as a chit-chat channel by commercial and private aircraft, in violation of 47 CFR 87.299 and 87.303. Having just found those sections, I noticed that 123.550, which is currently being used by the Phoenix PD helo's as a company channel, is also a flight test frequency. Does anybody have any contacts with a "Firebird" pilot or observer? Not trying to cause any trouble, just wondering if law enforcement has a waiver for other uses.

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=87&SECTION=299&YEAR=2001&TYPE=TEXT

Subpart J--Flight Test Stations

Sec. 87.299 Scope of service.

The use of flight test stations is restricted to the transmission of necessary information or instructions relating directly to tests of aircraft or components thereof.

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=87&SECTION=303&YEAR=2001&TYPE=TEXT

Sec. 87.303 Frequencies.

(a) These frequencies are available for assignment to flight test land and aircraft stations:

3281.0\1\ 123.175\2\ 123.225\3\ 123.400\2\
123.200\3\ 123.375\3\ 123.450\3\

(b) These additional frequencies are available for assignment only to flight test stations of aircraft manufacturers:

123.125\2\ 123.275\3\ S123.425\3\ 123.550\3\
123.150\2\ 123.325\3\ S123.475\3\ 123.575\2\
123.250\3\ 123.350\3\ S123.525\3\

\1\ When R3E, H3E or J3E emission is used, the assigned frequency will be 3282.4 kHz (3281.0 kHz carrier frequency).
\2\ This frequency is available only to itinerant stations that have a requirement to be periodically transferred to various locations.
\3\ Mobile station operations on these frequencies are limited to an area within 320 km (200 mi) of an associated flight test land station.

KRT872 is one of the City of Mesa FCC callsigns. Technically,
they're supposed to use the full callsign, but perhaps MPD only gives
it at the top of the hour, and shortens it to "872" for any other
transmission.

Full list:

Mark,

I'd also like to add my thanks for leading on the get together Saturday.

I recall a product designed for the TV repair folks to fix remote controls; it is a kit of conductive paint that you use to recoat the backs of the rubber buttons. In Tucson I'd check with Elliott's or Electronic City.

I also saw a couple of guys using a paper punch to punch out tin foil circles. They would then glue them to the back of the rubber buttons. Seems a bit extreme but they said it works for a while.

Of course, if you can order the keypad from rat shack for a couple of bucks, why bother.

Jim

Hi Brian,

Without going in to a lot of technical detail of Smartzone systems, suffice to say that Thompson Peak and White Tanks (the site you are referring to) are basically simulcasts of one another, with few exceptions. They are the two primary sites in the Valley (again, over simplifying here). The other sites are generally only active when a radio is affiliated with that site and monitoring or scanning a given talkgroup. By and large, what you hear on one of those two, you hear on the other. The same is not true for the remaining sites in the County.

Scottsdale is active on Thompson and White Tanks, and the primary channels are usually active on Humboldt and Mt. Ord as well (especially Ch C). Other Scottsdale alternate talkgroups can simulcast off Humboldt and Ord when radios are affiliated with it.

By the way, a good example of this idea working in reverse is hearing Surprise PD on the Thompson Peak system.

If anyone with the Maricopa County radio shop reads this particluar thread, perhaps they'll provide more details as well.

Dan

Dan, I realize you were generalizing here, but...

> [...] The other sites are generally only active when a radio is
> affiliated with that site and monitoring or scanning a given talkgroup.

When a radio is scanning on a smartzone system, it will only scan
talkgroups that are active on that zone; in otherwords, even though
talkgroup 12344 might be in the radio's scan list, it will only pick up
traffic for that talkgroup if that talkgroup is being broadcast on the
zone.

Right. But as I understand it, certain talkgroups need not be broadcast at all from certain fill-in tower sites if no radios are associated with that site at that time (i.e., no one would be listening). This is a critical factor for scanner listeners, should they decide to monitor fill-in sites removed from the jurisdiction of the agency they'd like to hear on it. It may or may not work, depending.

Thanks Dan..
Im just north of Wickenburg and I monitor Surprise PD and is acually comes in handy to be able to hear some of the Scottsdale traffic..Came across it by accident using the Trunker Program..

2624. DPS - VHF

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-21 02:23:52 UTC
From: foresigt
Topic: 2624 Message: 2624

A full marked DPS HP car pulled up next to me tonight and I noticed that it has a 1/4 wave vhf antenna mounted on the roof in front of the light bar, about the same place phx PD has their MDT antennas.

The car has the usual 450 antenna, but no cage or MDT in it.

Anydoby got any ideas why the vehicle would have a VHF antenna on it?

2625. RE: [ArizonaScanner] DPS - VHF

From: Dan Rollman
Topic: 2624 Message: 2625

Perhaps it's from another district?

Many of the cars in more rural districts (most, I think) have UHF and VHF radios (since most local PD's and sheriff's departments are VHF). Outside Phoenix, Tucson, Flag, etc. it wouldn't need an MDT either (no system).

Just a guess, but if it's for example a sergeant from District 3 down for a meeting, that would explain it.

From: Dan Rollman
Topic: 2626 Message: 2627

That would also be another plausible explanation, I suppose. Though it doesn't explain why a Metro unit has no MDT. Can't imagine a Metro car would have a dashcam system but no MDT. Who knows...

There were three helo's above the scene when it happened, one pilot described it as a "30 millimeter tracer round" that crossed in front of the nose of his aircraft. Mesa PD's bird was scrambled but I don't think they found anything. It sure got their attention.

2634. 460.575 active earlier

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-21 21:42:19 UTC
From: jhguetherman
Topic: 2634 Message: 2634

I heard HazMat comms on 460.575 at about 11:30am today. May have
been just a training exercise, or an actual operation. Entry was
taking air samples and reporting back to Hazard sector. Hazard sector
then told Entry to go to Decon.

Didn't look for a PL, but if I recall, it's 136.5Hz.

Comms were somewhat broken, repeats of transmissions were necessary.

From: Roy Schahrer
Topic: 2607 Message: 2636

This is a quick reminder about the upcomming ICP Get Together in
Phoenix this next Saturday the 23rd of Feb at the Fudruckers on
Highland just East of the A51. We meet at 6:00pm and usualy go until
8:30-9:00 (sometimes later out in the parking lot or over on Air Lane by
the Airport). Everyone is welcome and you do not have to belong to ICP to
attend. We are there for the enjoyment of chatting about scanners and
related topics and we generally have a great time. ICP is just the sponser
of the get together and several ICP members are usually there as well.

Come on out and say hi!!

From: Dan Rollman
Topic: 2637 Message: 2639

Do you mean 460.475? 450.475 would be a media frequency.

I don't know what it is, but I do know that District-11's frequency has sounded that way in certain parts of the East Valley for years. It sounds that way in Tempe, also. Once you head up in to District 11 up the Beeline, or way out East on US-60, it clears right up. Only thing I have ever thought of is what you mentioned: two simulcast sites both transmitting at the same time.

2644. Re: [ArizonaScanner] DPS Strange Noise On 460.475

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-02-24 18:20:11 UTC
From: mmi-comm@juno.com
Topic: 2644 Message: 2644

I have been told that everybody in Dist 11 wants to hear what everybody else is up to (even if they're like 100 miles away), so this requires that two (or more, not sure) transmitters to be on at the same time. Unfortunately this causes a bunch of background noise that we have to listen to. I have been on the beeline with an officer and I can't remember this being much of a problem, really....perhaps the beline is covered real well by one specific TX site (maybe Thompson pk).

Anyway, I bet this is the same case with 460.475.

Someone on 453.6 stated that there are 22 cars involved. Some upside-down, some on their sides, and others stacked on top of each other. For those of you not in the Tucson area, the derailment occurred a couple of miles due south of town and 1-2 miles east of the old IBM site and near I-10.

From: jhguetherman
Topic: 2644 Message: 2647

Same thing with 460.300 West Valley/District 14. Sounds like two or more repeaters transmitting at the same time in order to cover the whole district. Probably works well if you're only in range of one site, but not if you're in range of multiple sites.

I've also heard automated intruder alarms going out over 154.935, the Statewide VHF channel, on occasion. What facilities have the alarms? Who monitors the channel in Phoenix? I've never heard any transmissions on the channel to indicate someone was going to investigate.

Is there any activity on the nationwide 800 MHz mutual-aid channels, such as 866.0125? Particularly in the Phoenix area?

866.0125
866.5125
867.0125
867.5125
868.0125

I just programmed them in, and was wondering if there's actually any use of them.

Use is fairly rare, but they are definitely up and available. Most agencies on 800 MHz system have them programmed in, and they are generally referred to as:

USA-1 866.0125 (most popular, with Valley repeaters)
USA-2 866.5125
USA-3 867.0125
USA-4 867.5125
USA-5 868.0125
USA-6 866.0500

Every time I see these frequencies mentioned, I am reminded of the first time I heard traffic on them. A pursuit that started in N. Scottsdale and ended up somewhere near Tucson.

Note that a resolution was made that all references to these channels would be standardized; however I'm spacing on what the preferred naming is. Also note that 866.0500 is likely a regional mutual aid channel; only the first 5 are guaranteed to be nationwide.

> or way out East on US-60, it clears right up. Only thing I have ever thought
> of is what you mentioned: two simulcast sites both transmitting at the same
> time.

I think that's exactly what it is on 460.475 ... and a little sleuthing proves it...
check out the maps of transmitter sites that Walter Howard so graciously provided us (in the archives) and you'll see that there are D11 repeaters on the following sites:

Greens Pk
Brookbank
Payson
Signal Pk
Hutton Pk
Bronco Butte
Mt Ord

The latter two are definitely the source of the heterodyning I hear on the D11 frequency in Fountain Hills and North Scottsdale. I suspect those of you in other parts of the state are simply hearing some of the other simulcast transmitters beating together.

I don't envy DPS. I'll bet District 11 is a real bear to cover -- from Payson to Globe to just north of Mt Lemmon. Can you say mountainous region? Lots of transmitters? Lots of multipath?

So, about the only thing that could be done would be try to mess with the relative phasing - maybe its slipped over the years. Getting two transmitters in phase must be tough enough, let alone trying to phase match 7. I don't envy the tech's job.

I'll betcha the District 11 highway patrol units hear it too, and perhaps don't recognize what it is. Sometimes, it obliterates a soft-voiced dispatcher. [Fortunately DPS Phoenix has few of these :-)]

I also don't know how smart the voter system is - whether or not it shuts off all the transmitters except the one associated with the voted

receiver, or if it always operates some, if not all of the non-voted transmitters. I haven't really noticed if the heterodyning stops when the dispatcher it talking back to a particular unit that has already transmitted at least once for the the voter to recognize.

Even so, for dispatcher-initiated radio transactions, DPS would have to key up at least the main transmitters, if not all of them.

I do know that the dispatchers can separately select/enable/disable the towers if they really have trouble talking to a unit.

MCSO's voter system on the old UHF frequencies worked this way: if a unit called, and the dispatcher transmitted within approximately 4 seconds, then the base transmitter used was the voted tower for the unit. If the time-limit expired, then certain towers were designated as primary towers for dispatcher transmissions. The dispatcher could override the voter selection and force primary tower behavior by double-clutching the pedal.

It lead to strange sequences: A deputy in Gila Bend could call, and the reply would invariably go out the Oatman tower, which provided the strongest received signal. During the exchange between unit and dispatcher, the other units in say Wickenberg wouldn't hear it, and might be tempted to transmit, thinking the channel was clear. Or, if that unit in Gila Bend wanted to "run somebody", they might not answer the dispatcher-initiated call 10-30 seconds later because that call went out on the primary towers (White Tanks and Thompson Peak if I remember rightly). So, the dispatcher had to make an educated guess about which tower to use and force it to be selected for their first transmission. Once the unit answered, though, the pump was primed because the voter kicked in. Until the next time.

You might listen for this kind of stuff on DPS D11, now that you know what to listen for.
Or Walter can chime in and tell me that's not how DPS operates. :-0

They're two seperate sites, but are very close to each other. Located south of Globe-Miami, Signal Peak is northwest of Pinal Peak. If you have the 2001 edition of the Rand McNally/Thomas Guide map book, you can see them on page 108, B-3. East of Superior, west of S.R. 77.

Dave :)

What a fantastic document. I wondered where all the detectors were
located. I dreaded the thought of having to follow the line to find them.

For those who don't know, the detectors squeal on the trains. It says the
location, how many axles went by the detector, the speed of the train, and
the ambient temperature. It is all automated. It's pretty slick.

Hi Fred(and any other Pima County folks),

Your right, there has not been any talk on where the next meeting place will be.
I was not planning to deal with that until about mid March. From our quick "where do you all live" question, it looks like our next Tucson meeting will be Central or West.

On a completely unrelated topic, Radio Shack was more than happy to offer to fix my
old PRO-43. Their estimate to swap in a new keypad was $49.00 labor, plus $12.95 parts, and they wanted $10.00 up front as a deposit.

Mark in Oro Valley

One of the best sources for railroad maps and
timetables is Altamount Press. Their timetables show
divisional maps for both UP and BNSF. Also listed are
detectors with mileposts plus all Road and PBX
frequencies. BNSF has a great web site that includes
divisional maps plus other pertinent information.

altamontpress.com
www.bnsf.com

Hope this helps.

This is a post from a message board I frequent:

I was talking with a few of you folks and I decided to let you all know whats going on. My Unit along with a few others of the 2/180 FA Reg got activated for a 6-mo deployment to the AZ/Mexico Boarder to assist the Boarder Patrol and INS.

Should be interesting!

We are doing our PCI (Pre-Combat Inspections) until Monday morning... Then we are getting shipped out to Fort Bliss for a week or two for deployment briefings and inital loadout and then back here to AZ to begin the mission.

God I hope they get some air transport... I am not looking forward to a bus ride from Phoenix to El Paso with a bunch of pissed off guardsmen... ehehehhe

Anyhow thats all I know for now, I will keep everybody that cares up to date...

Peace out

Might be interesting listening down there.

Topic: 2672 Message: 2673

I saw that also over on the bc780 group. I was looking for info for Tucson.
I think most of Arizona is using 19.2 and the 4800 stuff will not work. If I
find a 19.2 mdt program I will send it your way.

2674. Coordinated AZ ANG and USCS Intercept of Cessna

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-02 00:57:30 UTC
From: FLANO
Topic: 2674 Message: 2674

This was the first exercise of this type that I've heard on my scanner.

2 AZ ANG F-16's were directed to covertly shadow a Cessna aircraft over the Tombstone MOA. While they were enroute to intercept the aircraft, two US Customs aircraft were also sent after the Cessna. The fighters only orbited over the Cessna, never descending below 12,000ft, while the Customs aircraft took 10,000 and below.

282.425mhz Hammer with Omaha-63L and Omaha-719 - Out of DMAFB
WADS Freq Bigfoot with Puma-01/02 (I was scanning multiple WADS freqs at the time, so I don't know which frequency they were on, but I know it wasn't 271mhz.)
134.45mhz Puma-01/02 (Referenced in traffic)- ALB Center

The target aircraft, or the playmate as the Customs guys put it, was Callsign Cessna-206. Hammer asked the Customs guy at one point if they had contact with Puma-01/02. The Customs freq was so active that I never picked up the F-16 traffic again :<

Did anyone catch this? The exercise took place between 3:30 and 4:15pm, MST.

John

Hey John... I don't know about the valley freqs ect, but here in Sierra Vista, the police use Motorola 9100 series mdt's. There are about 6 Moto 520's in service as well. Of course, the "format" is Moto's famous RD Lap protocol. The freqs associated with their system are 857.000/812.000 (mobile rx/tx). They (SVPD) are in the process of upgrading their mdt system, so the officers in the field can access the CAD system, do GPS, and other such goodies, at that point in time they equipment will be Panasonic laptops and MCS 2000 800 mhz radios. The repeater for use on that system is operational now (even though there isn't any units using it yet) and the freqs associated with that one are 856.150/811.150.
As a side note.... I have been in dispatch many many times, and I get to see what type of traffic is passed on the mdt's. As you might expect, there is a great deal of "sensitive" stuff passed along... tele #'s, names, locations, ect., stuff the cops don't want the public to know about. But, in almost equal volume, what is also passed along is what I would call "email type junk".... stuff like jokes, name calling, ribbing, superfluous stuff like "hows you boat project going" and such. In my humble opinion, we aint missing a great deal, and what we are missing, we don't really need to know about anyway!

I Think Buckeye is the main one on that channel, but anything that is WAY out there could end up on that channel. As far as I know it is a repeater as I can hear both sides of the transmissions here in Chandler.

I think that channel includes Buckeye and Buckeye Valley FD's
Along with Gila Bend and Tonopah fire.
If it's west of Goodyear, plan on it being on Blue Deck 12.

It is a repeated frequency by the way. Dispatcher is usually
simulcasting on Channel 8 also

From: Dan Rollman
Topic: 2684 Message: 2685

Good question!

However I show DPS only licensing 460.150, 460.175, and 460.200, not all of them.

Harold Pierson over at Southwest Ambulance (R/M) put in an application

http://wtbwww05.fcc.gov/default.sph/UlsQueryApp.exe?FNC=go_app_main2__Aapp_slist_results_html___1114420.0

for 460.050, 460.075, and 460.100 on White Tanks, Thompson Peak, and Usery. I went ahead and listed them in SWFD-7 as possible future use for Southwest.

In fact the page with Rural/Metro / Southwest Ambulance happens to be one of the "sample" pages from SWFD-7 that I put up on the Scannerstuff website. If you go to http://www.scannerstuff.com/SWFD-7-AZ.htm and click the picture of the new book cover, you can see those frequencies listed under "Rural Metro & Southwest Ambulances" on the first sample page shown. We'll see if and when they ever start using them.

2687. DMAFB - Mini-Airshow 3 Mar 02

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-03 20:43:49 UTC
From: FLANO
Topic: 2687 Message: 2687

Hello all :)

I just happened to be in Tucson this morning and I heard what sounded like airshow activity over at Davis-Monthan AFB. References to "knife-hand pass" and such forced me to drive over to the base. I watched it from near the end of the runway off base. Unfortunately, only had my handheld, so no UHF freqs could be heard, but they were on 118.85 and 253.50. No surprise there :)

We came up on a flight of four formation, comprised of:

Aircraft Individual Callsign Group Callsign

F-86 - Sabre-11 Sabre-11
F-16 - Viper-1 Sabre-12
P-51 - Mustang Sabre-13
F-15 - Tongo or Pongo-1 Sabre-14

Very cool group formation flying with one afterburner fly-by for the F-16 and two afterburner fly-by's for the F-15.

An A-10, callsign - Hot Demo, did a normal A-10 aerial demo.

Drove on base to see where the fun was at. If you can get on base, entrance is from Base Ops, near the flightline Fire Station. I was not able to stop, but I did notice our normal modern fighters there. There was also one Thunderbird F-16 there.

As we were leaving base, callsign Lightening-1 was leaving out the opposite end. Couldn't visually ID.

I heard a little bit of this yesterday on the ATC freqs, but didn't really take notice. I thought it was just practice stuff. I heard one of the 43rd ECS EC-130H's make reference to the Mustang in the group. Oh well!

They did not look like they would be packing up anytime soon....so tune up those freqs.

Tower - 118.85 and 253.50
Ground - 121.80 and 275.80
SOF - 139.70 and 327.70

Previous Airshow Related Freqs:
123.40
127.15
276.675 - F-15 Demo
322.60
359.30

Additional callsigns for today:

Eagle-11 - Unk aircraft landed at DMAFB

Additonal 4-ship formation comprised of:
Aircraft Individual Callsign Group Callsign

P-51 - Happy Mustang-21
P-51 - Viking Mustang-22
A-10 - Mustang-23
A-10 - Mustang-24

An additional A-10 (I think...hard to see through binoculars...) callsign Photo-11 took pictures of the formation flying.

118.85 and 253.50mhz

2689. New Arizona scanner radio information

Yahoo group: ArizonaScanner (1999 — 2002)
Date: 2002-03-04 04:06:53 UTC
From: Dan Rollman
Topic: 2689 Message: 2689

ArizonaScanner list members,

I'm excited to announce that the new 7th Edition of the Southwest Frequency Directory Arizona, can now be pre-ordered at www.scannerstuff.com for earliest possible delivery! This edition is bigger and better than ever, with a new 8.5" by 11" size that makes including more clear maps possible, and a greater emphasis on Arizona detail alone. New editions of separate detailed publications for other areas will follow.

This new edition of SWFD Arizona includes more additions, updates, and corrections than any other edition ever has because so many changes have occurred in the past few years. I'm confident readers will be pleased with the new depth of detailed, accurate information important to scanner hobbyists and professionals alike. The retail price of SWFD increased slightly with the 7th edition to $34.99 because of printing costs that increased sharply due in part to the new larger format. Visit www.scannerstuff.com to order your copies.

We expect only a limited number of copies to be available in late March, and pre-orders will be filled before any other orders, including retailers requests. You may now place your secure online order using a credit card via PayPal, and be assured your book will be one of the first to be shipped when the first round of printing is completed in late March. Visit www.scannerstuff.com to order your copies, and feel free to email me at danrollman@... with any questions. I hope you'll forward this email to friends and other scanner users who may be interested in the newest, most detailed, and most up-to-date radio resource for Arizona. Again, please feel free to send email direct to me with any questions. A reply to this email will send your message to the main ArizonaScanner list.

Sincerely,

Dan Rollman
SWFD Editor/AZScanner List Owner

Signal Peak has a fire lookout on it and is the lower powered of the 2
sites.
Pinal has broadcaster(s?) on it.
They are both in the "Pinal Recreation Area".
